ART. 16.—(1) All taxes and dues collected in the postal service by the post offices of Liechtenstein accrue exclusively to the Principality of Liechtenstein, and the sum total of these emoluments must, in consequence, be paid into the credit of the exploitation account. On the other hand, the receipts realised by the Swiss offices and arising from the collection of the same, taxes and dues accrue exclusively to Switzerland, and do not affect the accounts in question.

(2) At the same time, the receipts coming from the Liechtenstein postage stamps, which are sold to collectors through the offices specially reserved for this purpose by the Government of the Principality, must not figure in the above-mentioned accounts.

(3) In the telegraphic and telephonic traffic between Switzerland and Liechtenstein, the taxes and dues are also deducted for the profit of the country in which they are collected.

ART. 17.—(1) There is no rebate made with Liechtenstein on the subject of postal traffic between Switzerland and a third country. With what concerns the postal traffic between Liechtenstein and other States, such an allowance will not be necessary as long as the traffic remains about as intense in one sense as another.

(2) In the telegraphic and telephonic working between Liechtenstein and other countries, Liechtenstein receives such portion of the dues accruing to Switzerland from the outgoing traffic. With what concerns the incoming traffic between Liechtenstein and other countries the terminal tax is collected for the benefit of the State.

(3) Each of the contracting parties renounce the right of crediting their accounts with the dues from the transit in the postal, telegraphic and telephonic traffic between Switzerland and Liechtenstein.

ART. 18.—(1) The receipts accruing from the exploitation of the postal, telegraphic and telephone services in the Principality of Liechtenstein are primarily directed to cover the expenses of such exploitation. If the exploitation account shows a credit balance, such becomes the property of the Principality of Liechtenstein. A debit balance is charged to the account of the latter. It will, in addition, have to bear the expenses entailed by all constructions and acquisitions which, according to the opinion of the Swiss administrations, are necessary to the exploitation of the postal, telegraphic and telephone services of the Principality of Liechtenstein.

(2) Once the balance sheet is issued, such credit as acquired by either Switzerland or the Principality of Liechtenstein must be discharged in Swiss currency within a period of 14 days at latest after the acceptance of the accounts.

CHAPTER VIII.

FINAL RESOLUTIONS.

ART. 19.—(1) The present Convention will be ratified and will come into force after the exchange of the documents of ratification. It can be published on the 1st of January or the 1st of July of the civil year, subject to six months' notice.

(2) Modifications can be incorporated in the present Convention by mutual consent without formal announcement.

(3) The Swiss postal administration and the Swiss telegraphic and telephone administration will decree the working arrangements necessary to the present Convention.

ART. 20.—In case of disagreement on the subject of the interpretation of the present Convention, the question in dispute shall be submitted to an arbitration tribunal should it be found impossible to settle the matter by diplomatic means. In this case each of the contracting parties shall choose an arbitrator. If the two arbitrators should not agree they will themselves appoint a referee or umpire.

In testimony whereof, the plenipotentiaries have signed the present Convention and have thereto set their seal.

Executed in duplicate, at Berne, the 10th day of November, 1920.

(L.S.)	(Signed)	MOTTA.
(L.S.)	(Signed)	BECK.

Certifies that the above Convention is ratified and has the force of law in all its parts, promising, in the name of the Swiss Confederation, to observe it conscientiously at all times in so far as itself is concerned.

In testimony whereof the present ratification has been signed by the President and the Chancellor of the Swiss Confederation, and furnished with the federal seal.

Executed thus, at Berne, on the 28th January, 1921.

In the name of the Swiss Federal Council.

(L.S.)	SCHULTHESS,
	<i>The President of the Confederation.</i>
(L.S.)	STEIGER,
	<i>The Chancellor of the Confederation.</i>

Certifies that the above Convention is ratified and has the force of law in all its parts, promising, in the names of the Principality of Liechtenstein, to observe it conscientiously at all times in so far as itself is concerned.

In testimony whereof the present ratification has been signed by the head of the Government of the Principality and furnished with the State seal of Liechtenstein.

Executed thus as Vaduz on the 27th of January, 1921.

In the name of the Government of the Principality of Liechtenstein.

(L.S.)	DR. JOSEPH PEER,
	<i>The Head of the Government.</i>

N.B.—The exchange of the documents of ratification took place at Berne on the 31st of January, 1921, and the Convention, in accordance with the Article 19 above, came into force on the 1st of February, 1921.

LITHUANIA

(See also Map Section)

LITHUANIA (Lietuva) became a Grand Duchy in the early part of the 13th century and after subjugation by Poland and Russia in 1918, again became an Independent State. It has an area of 59,633 square miles with a population of 4,800,000.

CONTROL AND ORGANISATION.

Up to the time of going to press we have been unable to obtain any information relative to wireless in Lithuania.

LUXEMBOURG

(See also Map Section)

THIS small Grand Duchy lies roughly about 150 miles from the nearest sea coast, and is bounded on the east by Germany, on the south by France, and on the west by Belgium. It is governed by a Chamber of Deputies. Its total area is about 999 square miles, and it possesses a population of about 263,824.

ORGANISATION.

A receiving wireless telegraph station has been erected by the State at the capital city of Luxembourg, with the object of receiving daily French Official Time and Meteorological information.

ADMINISTRATION.

No law fixing conditions under which wireless apparatus may be installed is in existence, although a certain number of amateurs are in possession of receiving apparatus.

The Grand Duchy of Luxembourg has not adhered to the London Radiotelegraphic Convention; it has, however, made a declaration to the Berne Bureau in accordance with Article 48 of that Convention.

MACAO

(See also Map Section)

SITUATED in China, on an island of the same name and two adjacent islands (Taipa and Colôave), at the mouth of the Canton River, this Colony belongs to Portugal. It has an area of four square miles and a population of 74,866.

CONTROL AND ORGANISATION.

Up to the time of going to press we have been unable to obtain any information relating to wireless in the colony.

MADAGASCAR

(See also Map Section)

Including: Mayotte and the Comoro Islands, Réunion.

MADAGASCAR is a French colony under a Governor-General. It is situated to the south-east of the coast of Africa, and has an area of 228,000 square miles with a population of 3,545,264.

CONTROL AND ORGANISATION.

Up to the time of going to press we have been unable to obtain any special information relating to wireless in the colony. A reference however, is to be found under France and Algeria.

MALAY STATES

(See also Map Section)

Including Johore, Kedah, Perlis, Kelantan and Trengganu.

THE Malay States, not included in the Federation (Federated Malay States), are under British Protection, being transferred from Siam to Great Britain on March 10th, 1909. Their total area is 23,170 square miles with a population of 1,083,173.

CONTROL AND ORGANISATION.

There are at present no wireless stations in these States, and consequently no radiotelegraphic enactments.

MALTA

(See also Map Section)

Including Gozo.

THIS island forms the headquarters of the British Mediterranean Fleet and the principal coaling station for merchant vessels, as well as the Navy, in the Mediterranean. The language of the people is a corrupt dialect of Arabic. The Knights of St. John, who possessed the island from 1530 to 1798, raised the stupendous fortifications which rendered Malta so long militarily formidable. The island was finally recognised as a British dependency by the Congress of Vienna in 1814, and is ruled by a Governor, assisted by an Executive Council and a "Council of Government." In 1920 a partial measure of home rule was adopted. It has an area of 118 square miles, and a population of 228,534.

CONTROL AND ORGANISATION.

The administration of wireless telegraphy in Malta and its dependencies is under Naval control. There are three stations, one of which is open for public service to ships.

ADMINISTRATION.

Wireless telegraphy in the Colony is administered under the provisions of Telegraph Ordinances. Regulations under these Ordinances have been made by His Excellency the Governor. Two draft Ordinances for Wireless Telegraphy are expected to be promulgated by the end of 1922, and are printed below.

A—Government Notice No. 258 of December 24th, 1909.

B—Section 28, Malta Defence Regulations.

C—Ordinance to Control Wireless Telegraphy on Ships.

D—Ordinance to Control Wireless Telegraphy.

GOVERNMENT NOTICE, No. 258.

A It is hereby notified for general information, that His Excellency the Governor, in exercise of the powers vested in him by Article 41 of Ordinance No. I of 1904, as amended by Ordinance No. III of 1909, has been pleased to make the following regulations respecting the use of wireless telegraph apparatus on merchant ships, whether British or foreign, while in the territorial waters of these Islands.

By command, E. P. S. ROUPELL,
Acting Lieutenant-Governor and Chief Secretary to Government.

Lieut.-Governor's Office, The Palace, Valetta,
December 24th, 1909.

REGULATIONS RESPECTING THE USE OF WIRELESS TELEGRAPH APPARATUS ON MERCHANT SHIPS, WHETHER BRITISH OR FOREIGN, WHILE IN THE TERRITORIAL WATERS OF MALTA AND ITS DEPENDENCIES.

1. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of these Islands shall be worked in such a way as not to interfere with—

(a) Naval signalling; or

(b) the working of any wireless telegraph station lawfully established, installed or worked in these Islands or the territorial waters thereof;

and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used whilst such ship is in any of the harbours of these Islands, except with the special or general permission in writing of the Lieutenant-Governor.

3. If at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that the Government shall have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships whilst in the territorial waters shall be subject to such further rules as may be made by the Governor from time to time, and such rules may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

4. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

SECTION 28, MALTA DEFENCE REGULATIONS.

B PROHIBITION AGAINST POSSESSION OF WIRELESS TELEGRAPHIC APPARATUS, ETC.

No person shall, without the written permission of the Governor, make, buy, sell, or have in his possession or under his control any apparatus for the sending or receiving of messages by wireless telegraphy, or any apparatus intended to be used as a component part of such apparatus; and no person shall sell or give any such apparatus to any person who has not obtained such permission as aforesaid, and any person having in his possession or under his control any such apparatus, whether with or without the

permission of the Governor, shall on demand deliver the apparatus to the Governor, or as he may direct; and if any person contravenes the provisions of this regulation he shall be guilty of an offence against these regulations.

Where it appears to the Governor that there are reasons to suspect that any person having in his possession any apparatus for sending or receiving messages by telegraphy, wireless telegraphy, telephony or other electrical or mechanical means is using or about to use the same for any purpose prejudicial to the public safety or the defence of these Islands, he may, by order, prohibit that person from having any such apparatus in his possession, and may take such steps as are necessary for enforcing the order, and if that person subsequently has in his possession any apparatus in contravention of the order, he shall be guilty of an offence against these regulations.

For the purpose of this regulation, any apparatus ordinarily used as a distinctive component part of apparatus for the sending or receiving of messages by wireless telegraphy shall be deemed to be intended to be so used unless the contrary is proved.

Any person possessing private telephone installations or any apparatus capable of being used for transmitting telephone messages shall give notice to the Superintendent of Police of any such installation or apparatus, and if he fails to do so he shall be guilty of a summary offence against these regulations.

C The following draft Ordinance to control wireless telegraphy on ships which His Excellency the Governor proposes to issue under Section 12 of the Letters Patent constituting the Office of Governor and Commander-in-Chief is published for general information in conformity with section 3 (5) of His Majesty's Instructions to the Governor of Malta dated 14th April, 1921.

ORDINANCE No.

AN ORDINANCE ENACTED BY THE GOVERNOR OF MALTA IN THE EXERCISE OF THE POWERS CONFERRED UPON HIM BY HIS MAJESTY'S LETTERS PATENT DATED THE 14TH OF APRIL, 1921, CONSTITUTING THE OFFICE OF GOVERNOR AND COMMANDER-IN-CHIEF OF MALTA.

To Control Wireless Telegraphy on Ships.

Whereas Wireless Telegraphy is a reserved matter under the provisions of the Malta Constitution Letters Patent, 1921, and it is expedient for the peace, order and good government of Malta that provision be made therefor so far as ships registered in Malta are concerned:

It is enacted by the Governor as follows:—
ART. 1. This Ordinance may be cited as "The Merchant Shipping Wireless Telegraphy Ordinance, 1922."

2. Every seagoing British ship registered in Malta being a passenger steamer or a ship of sixteen hundred tons gross tonnage or upwards shall be provided with a wireless telegraph installation, and shall maintain a wireless telegraph service which shall be at least sufficient to comply with the rules made for the purpose under this Ordinance, and shall be provided with at least one or more certified operators and watchers, in accordance with such rules.

3. The Governor may exempt from the obligations imposed by this Ordinance any ships or classes of ships if he is of opinion that, having regard to the nature of the voyages on which the ships are engaged or other circumstances of the case, the provision of a wireless telegraph apparatus is unnecessary or unreasonable.

4. The Governor shall make rules prescribing the nature of the wireless telegraph installation to be provided, of the services to be maintained, and the number, grade and qualifications of the operators and watchers to be carried. Provided that no ship shall be required to carry more than one operator unless more than one operator would have been required under the provisions of the Merchant Shipping (Convention) Act, 1914.

5. A surveyor of ships or a wireless telegraphy inspector appointed by the Governor may inspect any ship for the purpose of seeing that she is properly provided with a wireless telegraph installation and certified operators and watchers in conformity with this Ordinance and with any rules from time to time made thereunder, and for the purpose of that inspection shall have all the powers of a Board of Trade inspector under the Merchant Shipping Acts, 1894 to 1916.

If the said surveyor or inspector finds that the ship is not so provided, he shall give to the master or owner notice in writing pointing out the deficiency, and also pointing out what in his opinion is requisite to remedy the same.

Every notice so given shall be communicated in writing to the Collector of Customs, and any ship which may seek to obtain a clearance or transire shall be detained until a certificate under the hand of any such surveyor or inspector is produced by the Master of the ship to the Collector of Customs to the effect that the ship is properly provided with wireless telegraph installation and certified operators and watchers in conformity with this Ordinance and with any rules from time to time made thereunder.

6. If the provisions of the foregoing articles of this Ordinance or of any rules from time to time made thereunder are not complied with in the case of any ship, the master or owner of the ship shall be liable in respect of each offence to a fine not exceeding five hundred pounds, and any such offence may be prosecuted before the Court of Magistrates of Judicial Police.

7. The obligations imposed by this Ordinance shall be in addition to, and not in substitution for, the obligations as to wireless telegraphy imposed by the Merchant Shipping (Convention) Act, 1914.

8. The foregoing provisions of this Ordinance shall, as from a date three months after the coming into operation of the obligations imposed by this Ordinance on British ships registered in Malta, apply to ships other than British ships registered in Malta while they are within any port in these Islands in like manner as they apply to British ships so registered.

9. In this Ordinance the expression "passenger steamer" means a steamer which carries more than twelve passengers, and "wireless telegraphy inspector" means an officer appointed by the Governor for the purpose mentioned in Section 5 of the Ordinance.

EDW. R. MIFSUD,

Clerk of the Nominated Council.

March 17th, 1922.

D The following draft Ordinance to control Wireless Telegraphy which His Excellency the Governor proposes to issue under Section 12 of the Letters Patent constituting the office of Governor and Commander-in-Chief is published for general information in conformity with Section 3 (5) of His Majesty's Instructions to the Governor of Malta dated 14th April, 1921.

ORDINANCE No.

AN ORDINANCE ENACTED BY THE GOVERNOR OF MALTA IN THE EXERCISE OF THE POWERS CONFERRED UPON HIM BY HIS MAJESTY'S LETTERS PATENT DATED THE 14TH OF APRIL, 1921, CONSTITUTING THE OFFICE OF GOVERNOR AND COMMANDER-IN-CHIEF OF MALTA.

To Control Wireless Telegraphy.

Whereas Wireless Telegraphy is a reserved matter under the provisions of the Malta Constitution Letters Patent, 1921, and it is expedient to make a law with regard to the possession of wireless telegraphic apparatus:

Be it enacted by the Governor as follows:—

ART. 1. This Ordinance may be cited as "The Wireless Telegraphy Apparatus Ordinance, 1922."

2. No person shall, without the written permission of the Governor, make buy, sell, or have in his possession or under his control any apparatus for the sending or receiving of messages by wireless telegraphy, or any apparatus intended to be used as a component part of such apparatus; and no person shall sell or give any such apparatus to any person who has not obtained such permission as aforesaid, and any person having in his possession or under his control any such apparatus, whether with or without the permission of the Governor, shall on demand deliver the apparatus to the Governor, or as he may direct; and if any person contravenes the provisions of this article he shall be guilty of an offence against the law.

3. The Governor may annex to any written permission as aforesaid such terms or conditions as he thinks fit and upon the breach of any such terms or conditions the person committing such breach shall be guilty of an offence against this law.

4. For the purpose of this law, any apparatus ordinarily used as a distinctive component part of apparatus for the sending or receiving of messages by wireless telegraphy or telephony shall be deemed to be intended to be so used unless the contrary is proved.

5. A person committing an offence against this law shall, on conviction, be liable to a fine not exceeding £50; and on a second or further conviction, to a fine not exceeding £100 or to imprisonment for a period not exceeding 3 months or to both such imprisonment and fine; and on conviction of a first or other offence against this law the Court may, and on the recommendation of the Governor shall, declare the permission given to the person convicted to be cancelled and order the apparatus to be delivered up to the Commissioner of Police.

6. In this Ordinance, "Wireless Telegraphy" means any system of communication by means of electric signals or telephony without the aid of any wire connecting the points from and at which the messages or communications are sent or received.

EDW. R. MFSUD,

Clerk of the Nominated Council.

March 10th, 1922.

MARSHALL ISLANDS

(See under PACIFIC ISLANDS (JAPAN)).

MARTINIQUE

(See also Map Section)

A COLONY of France, Martinique has an area of 385 square miles and a population of 244,439. It is under the administration of a Governor, assisted by a General Council.

CONTROL AND ORGANISATION.

Up to the time of going to press we have been unable to obtain any special information relating to wireless in the colony. A reference however, is to be found under France and Algeria.

MAURITIUS

(See also Map Section)

MAURITIUS lies in the Indian Ocean, 500 miles east of Madagascar and comprises a total area of about 720 square miles, with a population of 376,108.

The Colony was formerly ceded to Great Britain by the Treaty of Paris of 1814. Under letters patent of 1885, 1901, 1904, and 1912 partially representative institutions have been granted. The Administration of the Colony and its dependencies is vested in a Governor, assisted by an Executive Council and a Council of Government.

CONTROL AND ORGANISATION.

The wireless station of this colony has been closed down since July, 1920, but negotiations are in progress for the maintenance of a station to suit the needs of the colony.

ADMINISTRATION.

The legislation affecting Wireless Telegraphy in Mauritius was originated by an Ordinance (No. 33) issued in 1903 investing the Governor with certain administrative powers. This was amended by the "Wireless Telegraphy" (Amendment) Ordinance (No. 25) of 1912. These have since been consolidated by Ordinance No. 11 of 1913, and three sets of Regulations have been framed thereunder, as follows:—

- A—Ordinance No. 11 of August 22nd, 1913 (to Consolidate the Laws on Wireless Telegraphy).
- B—Regulations framed under Ordinance No. 11 of 1913 (Art. 4) (August 22nd, 1913).
- C—Additional Regulations respecting the transmission of messages by Wireless Telegraphy.
- D—Regulations governing the transmission of messages by Wireless Telegraphy through Rose Belle Station to and from Merchant Ships at sea.

ORDINANCE No. 11.

August 22nd, 1913.

A Be it Enacted by the Governor, with the advice and consent of the Council of Government, as follows:—

1. *Definition of "Wireless Telegraphy."*—In this Ordinance "Wireless Telegraphy" means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent or received; Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

2. *License for "Wireless Telegraphy."*—(1) A person shall not establish any wireless telegraph station or install or work any apparatus for wireless telegraphy in any place or on board any ship registered in the Colony except under and in accordance with a license granted in that behalf by the Governor.

(2) Every such license shall be in such form and for such period as the Governor may determine, and shall contain the terms, conditions and restrictions on and subject to which it is granted.

3. *Apparatus aboard ships.*—A person shall not work any apparatus for wireless telegraphy installed on any merchant ship, whether British or foreign, while that ship is in the territorial waters of the Colony, otherwise than in accordance with regulations under this Ordinance.

4. *Regulations.*—(1) The Governor in Executive Council may from time to time make regulations for carrying into effect the purposes of this Ordinance.

(2) If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters of the Colony shall be subject to such further regulations as may be made by the Governor from time to time, and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

5. *Search Warrant.*—If a Magistrate is satisfied by information on oath that there is reasonable ground for suspecting that a wireless telegraph station, has been established

without a licence in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any merchant ship without a license in that behalf or contrary to the provisions of any regulations made under this Ordinance or of any licence granted under this Ordinance he may grant a search warrant to any police officer or any person appointed in that behalf by the Inspector-General of Police and named in the warrant, and a warrant so granted shall authorise the police officer or person named therein to enter and inspect the station, place or ship and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

6. *Penalties.*—Any person who shall offend against any provision of this Ordinance or any of the regulations made thereunder shall be liable to a fine not exceeding five hundred rupees (Rs. 500) and upon such conviction the Court may order that any apparatus for wireless telegraphy in connection with which the offence was committed shall be seized and forfeited.

7. *Repeal Clause.*—Ordinances No. 33 of 1903 and 25 of 1912 are repealed.

8. *Short Title.*—This Ordinance may be cited as "The Wireless Telegraphy (Amendment) Ordinance, 1913."

Passed in Council at Port Louis, Island of Mauritius, this twenty-ninth day of July, One thousand nine hundred and thirteen.

B REGULATIONS FRAMED UNDER THE WIRELESS TELEGRAPHY ORDINANCE No. 11 of 1913 (ARTICLE 4).

1. Apparatus for wireless telegraphy on board a merchant ship shall not be worked or used while such ship is in any harbour or bay of the Colony except with the special or general permission of the Governor.

2. Apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the Colony shall not be worked in such a way as to interfere with

(a) Naval signalling, or

(b) The working of any wireless telegraph station lawfully established, installed or worked in the Colony or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and

wireless telegraph stations established on ships at sea.

3. In these regulations "Naval Signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and Naval Stations, or between a ship of His Majesty's Navy or a Naval station and any other wireless telegraph station whether on shore or on any ship.

4. For the purpose of any proceedings under these Regulations the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

5. Any summons or other document in any proceedings under these Regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

6. These Regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

7. Any person who shall offend against any of these Regulations shall be liable to a fine not exceeding five hundred rupees (Rs. 500), and any apparatus for wireless telegraphy in connection with which the offence was committed may be seized and forfeited.

8. The Regulations published under Government Notification No. 19 of January 25th, 1913, are hereby repealed.

Made by His Excellency the Governor in Executive Council at a meeting held on August 22nd, 1913.

C ADDITIONAL REGULATIONS RESPECTING THE TRANSMISSION OF MESSAGES BY WIRELESS TELEGRAPHY.

(MADE UNDER ARTICLE 4 OF THE WIRELESS TELEGRAPHY ORDINANCE NO. II OF 1913.)

1. Telegrams for transmission to ships at sea will in all cases be held at the Wireless Station until the ship in question arrives within range, *i.e.*, telegrams will not be transmitted to a ship which is approaching the Island until she has called the wireless station for the first time.

2. In the case of a ship going away from the Island the telegram will be transmitted immediately on receipt at the wireless station

unless she is known to have already passed out of range. In this case and in all cases where the transmission of the telegram by wireless proves to be impossible, the sender will be informed by service advice from the post office at which he handed in his telegram, and will be refunded the wireless charges.

Made by the Governor in Executive Council at a meeting held on the twenty-sixth day of December, 1913.

D REGULATIONS GOVERNING THE TRANSMISSION OF MESSAGES BY WIRELESS TELEGRAPHY THROUGH ROSE BELLE STATION, TO AND FROM MERCHANT SHIPS AT SEA.

(MADE UNDER ARTICLE 4 OF THE WIRELESS TELEGRAPHY ORDINANCE NO. II OF 1913.)

1. Messages received by wireless telegraphy from merchant ships at sea will be handed in at Rose Belle Post Office by an officer or agent of the wireless station and will be transmitted to any of the telegraph offices of the Colony for delivery to the addressee subject to the following conditions and charges:—

(a) A terminal charge will be made at the rate of R. 0.02 cents. of a rupee per word.

(b) The usual end portage charges from the post office of destination to the addressee will be made.

2. Messages for transmission to merchant vessels at sea will also be accepted at any of the telegraph offices in the Colony subject to the following conditions and charges:—

(a) The charge for messages shall be at the rate of 62 cents. of a rupee per word.

(b) The charge for portage from Rose Belle Post Office to the wireless station shall be 50 cents. of a rupee.

(c) Every message shall bear the supplementary word "wireless" for which a charge of 2 cents. of a rupee will be made.

3. The rules and regulations for the acceptance and transmission of messages by wireless telegraphy shall be in accordance with the rules and regulations of the Mauritius Post Office and Telegraphs for the time being in force.

4. Messages in code will not be transmitted or received by wireless telegraphy.

5. Regulations published under Government Notices No. 94 of 31st May, 1919, and No. 47 of 25th February, 1920, are repealed.

Made by the Governor in Executive Council, at a meeting held on the ninth day of July, one thousand nine hundred and twenty.

MESOPOTAMIA (IRAQ)

(See also Map Section)

MESOPOTAMIA (Iraq) was conquered by Indian and British troops during the Great War, Baghdad being occupied on March 11th, 1917. In the Treaty of Peace with Turkey it was recognised as an independent state, with King Feisal at its head.

A Treaty of Alliance between Great Britain and Iraq was provisionally signed on October 10th, 1922, by which Great Britain will assist King Feisal's Government in all matters political, civil and military, for a period of 20 years.

CONTROL AND ORGANISATION.

In 1915 the Indian Telegraph Department erected a 3-kW. Marconi station at Basra, and in 1917 a 30-kW. Marconi installation was constructed at the same place. These and other small stations (since dismantled) in Mesopotamia were worked by the military authorities, but in 1921 the Basra installations were taken over by the Civil Administration in Mesopotamia.

MEXICO

(See also Map Section)

THE Republic of Mexico occupies an important position in the southern part of the continent of North America, and is bounded on the north by the United States of America, and by Guatemala and British Honduras on the south. It lies approximately between 15° and $30^{\circ} 30'$ north latitude and 87° and 117° longitude east of Greenwich. With a President at its head, it is divided into 28 states, two provinces (territorio), and a federal district.

CONTROL.

The wireless service is worked exclusively by the Federal Government, presided over by the Secretariat of Communications and Public Works. The direct control is in the hands of the Technical Department of the Dirección General de Telégrafos Nacionales.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Amado Aguirre, Engineer ..	Secretary of Communications and Public Works	Mexico,
Ricardo C. López ..	Director-General of National Telegraphs	Mexico.
Carlos Islas Bustamante ..	Chief of the Electro-technical Department	Mexico.

ORGANISATION.

Private installations are allowed on the conditions established by the Dirección General de Telégrafos Nacionales authorised by the Secretariat of Communications and Public Works as long as the Decree promulgated on October 19th, 1916, is not violated. The radiotelegraphic stations open for public service to ships are fourteen in number, in addition to which we may include the installation which was recently completed at the port of Salina Cruz.

There are at present no radiotelegraphic arrangements in connection with aviation. Time and weather signals combined with "Shipping Advice" services are sent out from the coastal wireless stations daily.

The following are the particulars relating to radiotelegraphic stations :—

Radio Land Stations.

Pacific Coast	8
Mexican Gulf Coast	8
Interior	10

Radio Ship Stations.

Merchant ships	11
Naval ships	8
Lighthouse guard ship	1

ADMINISTRATION.

National Radiotelegraphic Laws are being drawn up. The only extant decree relative to radiotelegraphy runs as follows :—

A—Decree of October 19th, 1916.

B—Use of Wireless Apparatus at the Port of Tampico.

A ART. I.—The establishment and exploitation of Radiotelegraphic Stations is forbidden in the Mexican Republic except under the express authorisation of the Federal Government, which can only accord it on the terms and under the conditions which are contained in the Regulations attached to the said Law.

ART. II.—Anyone who without the authorisation of the Federal Government establishes

a Radiotelegraphic Station shall be liable to a penalty of 500-1,000 pesos, or imprisonment from 1 to 11 months, or shall suffer a combination of both penalties in accordance with the seriousness of the offence. Moreover, all apparatus, machines, and accessories forming part of the installation shall be sequestered for the benefit of the State.

ART. III.—If any corporation which installs a Radiotelegraphic Station be a company or

any other responsible body, direct responsibility with regard to the infraction of this law is vested in the person of the directors, agents or administrators.

ART. IV.—Any persons who make use of a Radiotelegraphic Station installed without the authorisation of the Federal Government shall be liable to a punishment of half the penalty enacted in ART. II preceding.

ART. V.—Any persons who make use of a Radiotelegraphic Station without the authorisation of the Federal Government, or who intercept a communication between Public Departments, or who divulge its contents, shall be liable to the penalty which is contained in ART. 770 of the Penal Code of the Federal District.

ART. VI.—This Law enters into operation from the date of its publication.

B In accordance with Article 8 of the London Convention, which requires that "The working of radio stations shall be organised as far as possible so as not to disturb the working of other radio stations," and

Article XLVI, Service Regulations affixed to the International Radiotelegraphic Convention of 1912, which requires that "The exchange of correspondence between shipboard stations shall be carried on in such a manner as not to interfere with the service of the coastal stations, the latter, as a general rule, being accorded the right of priority for the public service."

It is notified that American vessels when anchored in the port of Tampico, must not engage in the transmission of wireless messages to other American ships and to coastal stations in the United States at all times. Certain hours have been set apart for this purpose so as not to inconvenience Mexican stations at or near Tampico, and it has been requested that such vessels, while in the port of Tampico, confine their wireless operations to the hours specified for that purpose by the Mexican authorities.

Operators on ships arriving at Tampico should ascertain from the Mexican Radio Station at that port (XAJ) during what hours they may use their transmitter while at anchor in the harbour.

MONACO

(See also Map Section)

MONACO is situated on the Mediterranean and surrounded by the Alpes Mountains. It is a department of France, but a Principality with Prince Louis, the reigning monarch.

ADMINISTRATION.

There is no commercial wireless telegraphy and telephony in the State. Private installations are regulated by the decree printed below.

A—Decree ruling the conditions of the establishment and use of radiotelegraphic apparatus designed solely to receive time and meteorological telegrams.

ORDER.

A We, Ministers of State of the Principality

Considering the agreement between the Government of the Principality and the French Government, resulting in an exchange of letters on April 12th, 1921.

Considering the deliberations of the Government Council on March 19th, 1921, and March 8th, 1922.

WE DECREE.

The conditions ruling the establishment, use and employment, are fixed as follows by such persons in the Principality of the radiotelegraphic stations designed solely to receive time signals and meteorological telegrams.

ART. 1.—Applications for licenses must be addressed to the Minister of State. The application must indicate the precise spot where the station will work and furnish a description of the apparatus employed.

ART. 2.—The license is granted by the Minister of State.

ART. 3.—The receiving stations endorsed in Article 1 can only be used for the receipt of time signals and meteorological telegrams. All transmission of signals is formally prohibited.

ART. 4.—The contents of the radiotelegrams, other than meteorological ones, which would eventually be collected by the authorised receiving stations, must not be written down nor made known to anyone outside the officials appointed by the Administration, or of competent legal police-officers.

No use whatever shall be made of these telegrams.

ART. 5.—The Administration reserves the right to subject the receiving stations to such control as seems proper.

ART. 6.—The State will be under no responsibility on account of the use of the receiving stations of wireless telegraphy, concession for which has been granted.

ART. 7.—The concessionaires must notify the Minister of State of any modification which they propose to adopt in the installation of their station.

The Administration can, moreover, at any time, and for whatever reason, suspend or revoke the granted permissions, without having to pay any indemnity whatever or making known any motive for their decision.

These licenses carry no privileges, and cannot be made an obstacle to any similar licenses granted subsequently to any other petitioner whatever. They cannot be transferred to a third party without the express consent in writing of the Administration.

At the first application of the Administration, each licensee must immediately place his station out of working order.

ART. 8.—The licensee must submit to all customary or fiscal arrangements resulting from the laws, rules and regulations which may happen to occur in the affairs of establishment or use of the wireless telegraphy stations.

ART. 9.—The licensee must pay a statistical fee fixed at 10 francs per annum, and for each authorised receiving station.

ART. 10.—The cost of stamps applied to the acts relating to the license of time signal stations are to be borne by the licensee.

ART. 11.—The present order shall be deposited at the General Secretary's Office of the Minister of State, to notify whom it may concern.

ART. 12.—The Counsel to the Government for Public Works and Miscellaneous Affairs is charged with the execution of the present Order.

Executed at Monaco, at Government House, March 24th, 1922.

R. LE BOURDON,

Minister of State.

MOROCCO

(See also Map Section)

KNOWN to the natives as "Maghreb-el-Aksa" (the farthest west), Morocco is an empire sometimes spoken of as the Mauritanian Quadrilateral. It lies in North West Africa between Algeria on the east and the Atlantic Ocean on the west, and is bounded on the north by the Mediterranean and on the south by the Sahara Desert. Mulai Yusef, G.C.M.G., was proclaimed Sultan in 1912. By the Conference of Algeciras, held in 1906, France and Spain agreed to organise the police force and customs of the coast towns, whilst the internal government of the country lies mainly in the hands of the Sultan and his advisers. The total area is about 231,500 square miles, of which 10,000 square miles in under Spanish control. The combined total population is about 6,000,000.

(a) FRENCH ZONE.

CONTROL.

The present arrangements are as follows:—

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
M. le Colonel Appiano ..	Directeur du Service des Transmissions ..	Résidence Général Rabat.
M. Walter	Directeur de l'Office des Postes Télégraphes et Téléphones	Résidence Général Rabat.

The Directeur du Service des Transmissions at the Residency General is in control, through a controlling station at the Residency General, of all wireless telegraph stations, Civil, Military, and Naval, in the French zone.

N.B.—This control station is not the same as the Rabat Station CNF which is now abolished.

ORGANISATION.

The question of establishing wireless telegraph stations in Morocco first arose in 1906, when the Shereefian Government decided to erect several stations. A company was formed at Tangier, called the Société Internationale de la Télégraphie Sans Fil, which received the concession to install the service. Its director was M. Henri Popp, a French engineer. The company did not exist long, however, for in 1908 the Shereefian Government bought it out, M. Popp remaining as manager and chief engineer.

The first stations to be established were Tangier and Casablanca, in 1907. Next came Rabat, in 1908, and Mogador at the end of the same year.

In 1910 M. Popp died, and was succeeded by M. Biarnay, under whose direction the Fez station was established during the summer and autumn of 1911. Since then the Shereefian Government has created no further stations. The French Military Authorities, however, have stations all over the French Zone, including one at Agadir. Portable military wireless telegraphy installations have been in use by French mobile columns since 1911.

The present organisation consists of the Shereefian Government stations at Tangier and Casablanca. These are for public use, the stations at Féz, Mequinez, Marrakech, Agadir, and others, being solely for military use. The station at Mediuna is to be used only for the transmission of public and official urgent (triple paid) messages.

The various military and civil posts all over Morocco (French Zone) keep the Service des Communications at the Residency General informed of meteorological conditions at their several posts, and the Service des Transmissions also receives the Eiffel Tower, Madrid, Algiers, etc., news, and hands it on to the Aviation Militaire and the Service Météorologique, which is on the aviation ground at Rabat.

A powerful "post" is under consideration to be constructed by the Civil Office, for civil aviation or postal service,* and direction finding stations are to be installed during 1923 for ship services.

ADMINISTRATION.

Wireless telegraph forms a Government monopoly.

Military wireless telegraph stations keep headquarters at Rabat informed as regards meteorological conditions for the use of the military Aeronautical Bureau.

The current Laws and Regulations governing wireless telegraphy consist of the Radiotelegraphic Convention of London, 1912.

No licenses are given, and legislation for the grant of licenses for working wireless telegraphy will not be undertaken.

In principal the French Laws and Regulations also apply to Morocco.

(b) SPANISH ZONE.

CONTROL AND ORGANISATION.

The first wireless telegraph station installed in the Spanish Zone was that of Melilla (call letters EGB), erected in July, 1918.

At the present time there are in existence the following stations: Melilla (EGB), erected in July, 1918; Ceuta and Tetuan (EGD and EGK respectively), put up in July, 1911, and July, 1914, and Larache (EGF), in December, 1911.

The officers in command of these stations are as follows:—

Official.	Title.	Address.
Don Andres F. Mulere ..	Major of Engineers	Melilla.
Don Juan Reig y Valerino ..	Major of Engineers	Ceuta and Tetuan.
Don Francisce L. Trejo ..	Captain of Engineers	Larache.

These are the only permanent wireless stations in the Spanish Zone. They are all under the jurisdiction of the Ministry of War, and are controlled by the Centro Electro-tecnico y de Comunicaciones (Engineers).

ADMINISTRATION.

Existing arrangements as regards meteorological information are the same as those for Spanish Stations, the Madrid Station being in charge of this service.

The Regulations governing these stations are the same as for Spain, and licenses are given by the Centro Electro-tecnico y de Comunicaciones after the necessary examinations.

MOZAMBIQUE (Portuguese East Africa)

(See also Map Section)

PORTUGUESE East Africa comprises three district entities—(a) The Province of Mozambique, (b) the Companhia di Moçambique, and (c) the Companhia do Nyasa.

The combined area of the colony is 426,712 square miles, with a population of 3,120,000.

CONTROL AND ORGANISATION.

Up to the time of going to press we have been unable to obtain information relating to wireless in any of the divisions of the colony.

* Our information does not definitely state which.

NEPAL

(See also Map Section)

NEPAL is an independent Kingdom in the Himalayas, bounded on the north by Tibet, the east by Sikkim, and on the south and west by British India. The reigning sovereign is the Mahárájadhírája *Tribhubana Bir Bikram Jung Bahádur Shah Bahádur Shumshere Jung*, who succeeded his father in 1911. The area of this Gurkha state is 54,000 square miles, with a population of 5,600,000.

CONTROL AND ADMINISTRATION.

At present there are no wireless stations and no legislation to provide therefore, but a project is under consideration which it is expected will mature in some three or four years' time.

NETHERLAND INDIES

(See under DUTCH EAST INDIES).

NETHERLANDS

(See under HOLLAND.)

NEW BRITAIN

(See under NEW GUINEA.)

NEW CALEDONIA

(See also Map Section)

Including : New Hebrides, Loyalty Islands, The Isle of Pines, The Wallis Archipelago, The Huon Islands, Futuna and Alofi.

NEW CALEDONIA is under the administration of a Governor assisted by a Privy Council. The seat of administration is Nouméa, the capital.

NEW HEBRIDES

The New Hebrides consist of four groups of islands, the Banks, Torres, Central, and Southern, lying between 12° and 20° south latitude and 165° and 170° east longitude. The four groups, which have an estimated area of 5,500 square miles, and a population of 60,000, comprise some 50 to 60 islands, large and small, of which the largest are Santo (Espiritu Santo), Malekula, and Efate. The islands are administered by a Condominium established under a Convention between Great Britain and France, signed on October 20th, 1906, each country being represented by a Resident Commissioner. The seat of Government is at Vila, in the island of Efate. The laws of the two nations apply to their respective nationals in the group, as also such joint regulations as may be passed by the Resident Commissioners, or the High Commissioners for Great Britain and France under the authority of the Convention referred to. Natives are subject to regulations similarly enacted.

CONTROL AND ORGANISATION.

An agreement was arrived at in 1913 between the British and French Governments to establish a wireless telegraph station in the New Hebrides at the joint expense of the two Governments. In March, 1915, a contract was entered into with the Société Française Radio-électrique for the erection of such a station at Vila on the island of Efate. In October, 1915, the engineer and operator, together with the material, arrived at Vila, and on September 1st, 1916, the installation was completed, and the station opened to the public.

Wireless telegraphy in the New Hebrides is practically a State monopoly. No provision is made for licenses for private installations, which are prohibited, except with the permission of the administration. The Resident Commissioners are responsible for the control of radiotelegraphic activity in the islands. The only station at present is the land station of Vila, which is directly controlled by Government and is open for public service to ships.

There are no firms or companies engaged in the manufacture of wireless apparatus, and no wireless societies or clubs. No aviation radio stations exist. A meteorological message is sent out daily to Fiji.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
The British and French	Resident Commissioners	Vila
Mr. J. Copie	Officer in Charge and Chief Operator	Vila
Mr. M. A. Prudence	Assistant Operator	Vila

ADMINISTRATION.

Two joint regulations affecting wireless telegraphy have been issued by the Condominium Administration, the first dated January 7th, 1909, No. 1, "The Wireless Telegraph Regulation, 1909," the other the "Wireless Telegraph (Ships) Regulation, No. 3, of 1916."

The texts of these appear below:—

A—Regulation dated 1909.

B—Wireless Telegraph (Ships) Regulation, 1916.

A JOINT REGULATION TO REGULATE THE INSTALLATION OF WIRELESS TELEGRAPHY IN THE NEW HEBRIDES.

A 1. From the date of the passing of this regulation it shall be unlawful for any person to use or establish in any of the islands of the New Hebrides, including the Banks and Torres Islands, any apparatus or installation for the purpose of electrical communication by wireless telegraphy without a license first obtained from the Resident Commissioners conjointly such license to be granted on such terms and conditions as the Resident Commissioners aforesaid may from time to time determine.

2. Any person offending against the provisions of the preceding section or failing to comply with the terms and conditions of a license when granted by the Resident Commissioners under the provisions of this regulation shall be liable to a penalty not exceeding twenty pounds and to forfeit any apparatus used or established for the purpose aforementioned.

3. Offences against this regulation shall be justiciable by the Joint Court contemplated by the tenth Article of the Anglo-French Convention of the twentieth day of October, one thousand nine hundred and six, and pending the establishment of such court by the court of the nation to which or to whose legal system the accused may belong.

4. This regulation may be cited as "The Wireless Telegraph Regulation, 1909."

Published and exhibited at the Public Offices of the Resident Commissioners for His Britannic Majesty and for the French Republic this seventh day of January in the year one thousand nine hundred and nine.

A JOINT REGULATION TO CONTROL THE USE OF WIRELESS TELEGRAPH APPARATUS ON MERCHANT VESSELS IN THE NEW HEBRIDES.

B 1. From the date of the passing of this regulation all apparatus for wireless telegraphy on board merchant ships in the territorial waters of the New Hebrides shall be worked in such a way as not to interfere with:

(a) Naval signalling;

(b) The working of any wireless telegraph station lawfully established, installed or worked in the New Hebrides or the territorial waters thereof; and

(c) The transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. No apparatus for wireless telegraph on board a merchant ship shall be worked or used while the ship is in any of the harbours of the New Hebrides except with the joint special or general permission of the Resident Commissioners.

3. The Resident Commissioners shall have power to issue such further rules as to them may seem expedient for the control of wireless telegraphy on merchant vessels and for the censorship of messages transmitted from such vessels while in the territorial waters of the Group.

4. Any infraction of this regulation shall be punishable by the Joint Court with a money penalty of from one to twenty pounds and imprisonment for one day to one month or with one or other of these penalties.

5. This regulation may be cited as the "Wireless Telegraph (Ships) Regulation, 1916."

Published and exhibited in the Public Offices of the Resident Commissioners for Great Britain and the French Republic, at Vila, in the New Hebrides, this 30th day of October, 1916.

NEWFOUNDLAND AND LABRADOR

(See also Map Section)

THE Island of Newfoundland lies between $46^{\circ} 37''$ and $52^{\circ} 39''$ north latitude; its longitude stretching from $52^{\circ} 35''$ to $59^{\circ} 25''$ west. Its north-western side is bounded by the Gulf of St. Lawrence, whilst the Straits of Belle Isle divide it from the North American Continent.

Newfoundland ranks as the oldest British Colony, having been formally occupied by Sir Humphrey Gilbert in August, 1583. A Governor was first appointed in 1728, and in 1855 "Responsible Government" was accorded.

The Executive is vested in a Governor aided by an Executive Council. Dependent on Newfoundland is Labrador, the most easterly part of the American continent. The combined area of the two is 162,734 square miles, with a population of 267,330.

CONTROL.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Hon. Mr. R. A. Squires, K.C., LL.B. ..	Prime Minister and Colonial Secretary ..	St. John's
Hon. Mr. W. F. Coaker	Minister of Marine and Fisheries ..	do.
Hon. Mr. W. W. Halfyard	Minister of Posts and Telegraphs ..	do.
Hon. Mr. Arthur Mews, C.M.G. ..	Deputy Colonial Secretary ..	do.
Mr. H. W. Le Messurier, J.P., C.M.G. ..	Deputy Minister of Customs ..	do.
Mr. Campbell	Secretary & Inspector Post Office ..	do.

Mr. H. W. Le Messurier, C.M.G., the Deputy Minister of Customs, refuses clearance to any vessels of Newfoundland Register not licensed in conformity with the Acts, or whose operators are not in possession of provisional service certificates issued by the Minister of Posts.

ORGANISATION.

The Colony is proud of its association with the first wireless message flashed across the Atlantic. This was received by Senatore Marconi himself on Signal Hill, an eminence overlooking the narrows of St. John's. Newfoundlanders hope that ere long some suitable memorial may be erected on Signal Hill of this epoch-making event.

In 1906 an agreement was made under which the Marconi Wireless Telegraph Company of Canada undertook to operate all the Labrador stations during the fishing season of each year, the Newfoundland Government to pay the company an annual royalty, and the revenue accruing from this traffic to go to the company, who further agreed to forward all traffic over the Newfoundland Government Postal Telegraph System.

The success of this arrangement prompted the Government to propose an extension of the system on the Labrador Coast by two or more stations—the Marconi Company to erect and operate the stations under the terms of the agreement. In the summer of 1913 stations were accordingly erected by the Marconi Company at Cape Harrison and Makkovik. In 1911 it was agreed to establish a station between Indian Harbour and Cape Harrison to complete the chain on the Labrador Coast.

After further negotiations, an important agreement was concluded in December, 1912, which covers the following points: The old agreement terminating in 1916 is extended for a further period of ten years, terminating in 1926; all other undertakings entered into in the earlier agreement will be continued until 1926. The Marconi Company has erected and is operating a station at Fogo, on the east coast of Newfoundland—this station to be the property of the Marconi Company, and to be exempt from the Government tax of \$4,000 during the currency of the agreement.

The Sealing Industry forms an important item in the industrial activities of the Colony, and the disaster of 1914 (wherein the *Southern Cross* was lost with all hands) led to the instalment of wireless equipment on the fleet of sealers, which was made compulsory by legislation to that effect.

At the present time the following stations exist:—

Public service to ships	5
Government service only	1
Public inland traffic	9
Direction-finding service	1
Ship stations	17

ADMINISTRATION.

The general Regulation of Wireless is governed by the Posts and Telegraph Acts, 1891 to 1906.

A—Act of 1905 (Cap. VII).

B—Post and Telegraph Act, 1906.

C—Wireless Telegraphy (Steamers) Act, 1914.

D—Wireless License.

E—Provisional Certificate for Wireless Operators.

F—Amateur Experimental License.

THE ACT OF 1905, CAP. VII.

A This Act refers to taxes upon business transacted by telegraph and telephone companies within and in transit through the Colony. Clause 2, Section 2, reads as follows:—

A sum equal to one per cent. in manner hereinafter provided of the total amount received by or due to the company in respect of all telegraphic messages passing over the land lines of the company or transmitted or received by any wireless method of telegraphy to or from any place within this Colony from or to any other place within this Colony during a period of twelve calendar months ending on the first day of May of each year: Provided that this subsection shall not apply to messages which originate or are delivered in any place outside the Colony.

The first of such payments shall be made on the 30th day of June, 1906, in respect of the period of twelve months ending on the preceding first day of May.

Section 4 of the same Clause (2) reads as follows:—

A sum of four thousand dollars (\$4,000) in respect of every wireless telegraph station or other means of communication by wireless methods of telegraphy between this Colony and any place, ship or vessel outside this Colony, for the time being belonging to or worked by or on behalf of the company which now is or hereafter shall be established in this Colony.

The first of such payments shall be made on the 30th day of June, 1906: Provided that if the Governor in Council is satisfied that any such wireless telegraph station or other such means of communication is established for the purpose only of reporting passing ships or vessels, he may dispense the payment of such last-named sum and discharge the company from liability therefor in respect of such station or means of communication.

Clause 1 (1) of the Act of June 15th, 1905, Cap. XXI, reads:—

Whenever in the opinion of the Governor an emergency shall have arisen in which it is expedient for the public service that the Government of the Colony shall have control over the transmission of messages over any telegraph line, telephone line, or by any other form of telegraphy, it shall be lawful for the Governor in Council at any time to assume and for any length of time retain possession of any telegraph line, telephone,

or any form of telegraphy in this Colony, and of all things necessary for the efficient working thereof, and may for the same time require the exclusive service of the operators and other persons employed in working such telegraph line, telephone, or any form of telegraphy; and the company or other proprietor of such telegraph line, telephone or any form of telegraphy, shall give up possession thereof, and the operators and other persons so employed shall, during the time of such possession, diligently and faithfully obey such orders, and transmit and receive such despatches as they are required to receive and transmit by any officer duly authorised by the Governor in Council, and every company or other proprietor, operator or person violating any of the provisions of this section shall incur a penalty not exceeding one hundred dollars (\$100) for every refusal or neglect to comply with the requirements thereof, such penalty to be recovered by action in the name of the Minister of Finance and Customs, in a summary manner before a Stipendiary Magistrate or Justice of the Peace.

POST AND TELEGRAPH ACT, 1906.

B 1. (1) A person shall not establish any wireless telegraph station or install or work any apparatus for wireless telegraphy, in any place in this Colony or on board any ship registered in this Colony, except under and in accordance with a license granted in that behalf by the Postmaster-General, with the consent of the Governor in Council.

(2) Every such license shall be in such form and for such period as the Postmaster-General may determine, and shall contain the terms, conditions, and restrictions on and subject to which the license is granted, and any such license may include two or more stations, places or ships.

(3) If any person establishes a wireless telegraph station without a license in that behalf, or installs or works any apparatus for wireless telegraphy without a license in that behalf, he shall be guilty of a misdemeanour, and be liable on conviction in a summary manner before a Stipendiary Magistrate to a penalty not exceeding fifty dollars, and on conviction on indictment to a fine not exceeding five hundred dollars or to imprisonment, with or without hard labour, for a term not exceeding twelve months, and in either case be liable to forfeit any apparatus for wireless telegraphy

installed or worked without a license, but no proceedings shall be taken against any person under this Act except by order of the Postmaster-General.

(4) If a Stipendiary Magistrate is satisfied by information on oath that there is reasonable ground for supposing that a wireless telegraph station has been established without a license in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any ship as aforesaid without a license in that behalf, he may grant a search warrant to any police officer or any officer appointed in that behalf by the Postmaster-General, and named in the warrant, and a warrant so granted shall authorise the officer named therein to enter and inspect the station, place or ship, and to seize any apparatus which appears to him to be used, or intended to be used, for wireless telegraphy therein.

(5) When a fine under this Act is imposed by a Court, Judge or Magistrate, and the master or owner of any ship is ordered to pay the same and the same is not paid at the time and in the manner prescribed, the Court, Judge or Magistrate making the order may, in addition to any other powers they may have for the purpose of compelling payment, direct the amount remaining unpaid to be levied by distress and sale of the ship, her tackle, furniture and apparel.

(6) The Postmaster-General may make regulations for prescribing the form and in which applications for licenses under this Act are to be made, and, with the consent of the Governor in Council, the fees payable on the grant of any such license.

(7) The expression "wireless telegraphy" means any system of communication by telegraph as defined in "The Post and Telegraph Acts, 1891 to 1904," without the aid of any wire connecting the points from and at which the messages or other communications are sent and received.

2. This Act shall be read with and form part of "The Post and Telegraph Acts, 1891 to 1904," and the said Acts and this Act may be cited as "The Post and Telegraph Acts, 1891 to 1906."

WIRELESS TELEGRAPHY (STEAMERS) ACT.

C The following Act respecting the provision of wireless telegraphy on steamers engaged in the trade of Newfoundland was passed on September 4th, 1914:—

1. Every steamer to which this Act applies shall be provided:—

(1) With a wireless telegraph installation approved of by the Minister of Marine and Fisheries;

(2) With at least one qualified wireless operator approved of by the Postmaster-General;

(3) With a Morse signalling apparatus approved by the Minister of Marine and Fisheries;

(4) With at least one person on board capable of operating such signalling apparatus and of reading signals from other ships.

2. The wireless telegraphy installation provided on a ship to which this Act applies shall be maintained in good order and shall be attended to by an operator qualified as aforesaid in accordance with rules and regulations to be made by the Governor in Council under this Act for the purposes thereof.

3. No steamer to which this Act applies shall receive a clearance at any Custom House for the Seal Fishery or otherwise unless and until the Collector is satisfied that the provisions of this Act in respect of said steamer have been complied with.

4. If any requirement of this Act is not complied with in the case of any steamer to which this Act applies, the master or owner shall be liable for each offence to a fine of twenty-five hundred dollars, to be recovered in a summary manner before a Stipendiary Magistrate.

5. This Act shall apply to any steamer which ordinarily is engaged in prosecuting the Seal fishery from any port of this Colony, when engaged in the Seal fishery or when carrying more than sixty persons; and to any other vessel carrying passengers from or within this Colony when named by the Governor in Council in a Proclamation to be published in the *Royal Gazette*.

6. Nothing in this Act shall affect the obligation to obtain a license for a wireless telegraphy installation under "The Postal and Telegraph Acts, 1891 to 1906," or prevent the Governor in Council or other person exercising a like control over such wireless telegraphy in times of war or otherwise as may be exercised in respect of other wireless telegraphy.

W. 19
D SHIP LICENSE No.
19....

COLONY OF NEWFOUNDLAND.

"LICENSE TO USE WIRELESS TELEGRAPHY."

Issued in accordance with the provisions of the London Convention, of 1912.

The herein named resident of is hereby licensed to establish and operate a wireless telegraph station on board the ship for the term or period commencing on the first day of April, nineteen hundred and, and terminating on the thirty-first day of March, nineteen hundred and, and to install and operate at such station the apparatus mentioned in the schedule hereto, on payment of the sum of one dollar, being the license fee for the privilege above named.

This license is subject to the following terms, conditions and restrictions:—

1. In this license, the following words and expressions shall have the several meanings hereinafter assigned to them unless there be something, either in the subject or context, repugnant to such construction, that is to say:

The expression "marine signalling" means signalling by means of any system of wireless telegraphy between two or more ships, between ships and shore stations and any other wireless telegraph station, or between shore stations and ships.

2. (1) The licensee shall not establish, install or operate any apparatus for wireless telegraphy, except the apparatus hereinafter called the "licensed apparatus," specified in the said schedule hereto.

(2) No tolls, fees or other consideration shall be received, levied or collected by the licensee until the same have been approved of by the Government of Newfoundland.

3. (1) The licensee shall so operate the licensed apparatus as not to interfere with the working of any wireless telegraph station established in

Newfoundland, or with marine signalling on the waters or territory of Newfoundland or neighbouring waters or territory.

(2) With a view to preventing such interference as aforesaid, the licensee shall comply with all directions which shall be given to the licensee by the Postmaster-General and with all rules prescribed by the Postmaster-General for observance by his licensees:

(a) With respect to all arrangements to be adopted for the purposes of syntony or enabling the messages exchanged by means of the licensed apparatus to be distinguished from those emanating from any other wireless telegraph station;

(b) With respect to any alternation of messages which the Postmaster-General may think necessary; and

(c) Generally with respect to avoiding interference between one wireless telegraph station and another.

(3) The licensed apparatus shall not, without the consent of the Postmaster-General, be altered or modified in respect of any of the particulars mentioned in the schedule hereto.

4. The licensee shall, if so required in writing by the Postmaster-General, cease to operate the licensed apparatus for such period (not exceeding, hours in any one day) as may be specified by the Postmaster-General.

5. Subject to the provisions of this license, and in accordance with the regulations issued from time to time by the Postmaster-General, the licensee shall transmit and receive messages by means of the licensed apparatus to and from any coast station or to and from any other ship without regard to the particular system of wireless telegraphy installed at such coast station or on such other ship, on equal terms without favour or preference, whether as regards rates of charge, order of transmission or otherwise.

6. The licensee shall not be obliged to transmit and receive commercial messages by means of the licensed apparatus to and from a ship station on a ship registered in a country which does not adhere to the International Radiotelegraphic Convention, unless instructed so to do by the Postmaster-General in his regulations.

7. (1) If and whenever any Department of the Government shall require the licensee, his servants or agents to transmit, by means of the licensed apparatus, any message on His Majesty's service (including messages to and from ships of His Majesty's Royal Navy or Newfoundland or Canadian Government vessels), such messages shall have priority over all other messages, and the licensee, his servants and agents shall, as soon as reasonably may be, transmit the same, and shall, until transmission thereof, suspend transmission of all other messages, and the rates to be charged on such messages shall not exceed half the rates charged the ordinary public.

(2) The licensee shall not be entitled to claim any compensation in respect of the suspension of the transmission of messages as aforesaid.

8. The licensee shall, so far as possible, receive from all other stations all requests for assistance and all signals of distress and retransmit them with the least possible delay to the proper authorities by means of the licensed apparatus or any other means in his power.

9. The licensee shall not divulge to any person (other than properly authorised officials of the Government or a competent legal tribunal) or make any use whatever of any message coming to the knowledge of the licensee and transmitted by marine signalling or by any system of wireless telegraphy.

10. All messages transmitted by means of the licensed apparatus shall be copied in full in registers to be kept by the licensee for that purpose, and in such registers each of such messages shall be accompanied by its identifying number and date and full particulars of its places of origin and ultimate destination and such further particulars as the Postmaster-General shall from time to time reasonably require to be shown, messages on His Majesty's service being in such registers distinguished from other messages. The licensee shall preserve all used message forms written and printed, and transcripts of messages and all other papers for such period as is from time to time prescribed by the Regulations of the International Radiotelegraphic Convention, and such registers and message papers shall be open to the inspection of the Postmaster-General or his officers thereto authorised at the head office of the licensee, in between the hours of 10 a.m. and 5 p.m., on every day except Sunday or a public holiday.

11. The Postmaster-General or his officers may, from time to time and at all reasonable times, enter upon the herein licensed station, for the purpose of inspection, and may inspect any apparatus fixed or in use in such station, for the purpose of sending and receiving messages by wireless telegraphy and all other telegraphic instruments and apparatus fixed or being in such stations, and the working and user of such apparatus and telegraphic instruments.

12. The licensee shall prepare a detailed return of the messages handled by the licensed station during each month on the forms provided for that purpose by the Postmaster-General and shall forward the same to the Postmaster-General at the end of each month.

13. (1) The licensee shall observe at the station the provisions of the International Radiotelegraphic Convention as adhered to by His Majesty in respect of the Colony of Newfoundland and the detailed regulations from time to time made thereunder for carrying such provisions into effect.

(2) The licensee shall operate the licensed apparatus in accordance with any regulations which may be issued from time to time by the Postmaster-General.

14. Except with the consent in writing of the Postmaster-General the licensee shall not assign or sublet this license.

15. The licensed apparatus at the said ship station shall be worked only by a person or persons holding a certificate or certificates issued by the Postmaster-General.

Certificates shall be granted to persons of such technical proficiency, and shall be in such form and subject to such conditions as the Postmaster-General may from time to time prescribe.

16. The licensees shall carry this license on the ship on which the ship station is established under this license, and also such documents as may be prescribed by the Postmaster-General, for the purpose of enabling the licensee to communicate with coast stations in accordance with the rules and regulations of the International Radiotelegraphic Convention of Berlin, 1906.

17. (1) If, and whenever, in the opinion of the Postmaster-General or any officer in command of one of His Majesty's ships of war, an emergency shall have arisen in which it is expedient for the public service that the Government shall have control over the transmission of messages by the licensed apparatus, it shall be lawful for the said Postmaster-General, by

warrant under his hand, to direct and cause the licensed apparatus or any part thereof to be taken possession of in the name and on behalf of His Majesty and to be used for His Majesty's service and, subject thereto, for such ordinary services as to the said Postmaster-General may seem fit, and in that event, any person authorised by the said Postmaster-General may enter upon the stations of the licensee, and take possession thereof and use the same as aforesaid.

(2) The Postmaster-General or any officer in command of one of His Majesty's ships of war may when he considers such an emergency as aforesaid to have arisen, instead of taking possession of the stations of the licensee, direct and authorise such persons as he may think fit to assume the control of the transmission of messages by the licensed apparatus, either wholly or partly and in such manner as he may direct, and such persons may enter upon the licensee's premises accordingly, or the said Postmaster-General or officer may direct the licensee to submit to him all messages tendered for transmission or arriving by the licensed apparatus or any class or classes of such messages, to stop or delay the transmission of any messages or deliver the same to him or his agent and generally to obey all such directions with reference to the transmission of messages as the said Postmaster-General or officer may prescribe, and the licensee shall obey and conform to all such directions.

3. In any such case as aforesaid, if the licensee shows that during the exercise of any of the powers aforesaid, his receipts for the licensed apparatus with respect to which the said powers have been exercised have been less than his receipts from the same source during a corresponding period, the Government shall pay to the licensee, as compensation for any loss of profit sustained by the licensee by reason of the exercise by the Postmaster-General of any of the powers hereby reserved, such sum as may be settled between the Postmaster-General and the licensee by agreement or as in case of difference may be determined by arbitration. Provided always that no such compensation as aforesaid shall be paid if and so far as the powers hereby reserved to the Postmaster-General are exercised

for the purpose of preventing direct communication with any of His Majesty's enemies, and, save with the consent of the Postmaster-General no such compensation shall be paid if and so far as the powers aforesaid are exercised for the purposes of preventing direct or suspected communication with any of His Majesty's enemies or of protecting the interests of His Majesty under the apprehension of impending war.

18. In case of any breach, non-observance or non-performance by or on the part of the licensee of any of the terms or conditions herein contained and on the part of the licensee to be observed and performed, then and in any such case, the Postmaster-General may, by writing revoke and determine these presents, and the said licenses, powers and authorities and each and every of them shall absolutely cease, determine and become void.

19. Nothing in these presents contained shall prejudice or affect the right of the Postmaster-General, from time to time, to establish, extend, maintain and work any system or systems of wireless telegraphic communication (whether of a like nature to that hereby licensed or otherwise) in such manner as he shall in his discretion think fit, neither shall anything herein contained prejudice or affect the right of the Postmaster-General, from time to time, to enter into agreements for or to grant licenses relative to the working and user of wireless telegraphs (whether of a like nature to those hereby licensed or otherwise), or the transmission of messages in any part of Newfoundland, by means of wireless telegraphy, with or to any person or persons whatsoever upon such terms as he shall, in his discretion, think fit.

20. Any notice, request or consent (whether expressed to be in writing or not), to be given by the Postmaster-General under these presents may be under the hand of any authorised officer, for the time being, of the Newfoundland Postal Telegraph Department and may be served by sending the same by registered letter to the licensee, and any notice to be given by the licensee, under these presents, may be served by sending the same by registered letter addressed to the Postmaster-General, St. John's, Newfoundland.

PROVISIONAL
WIRELESS OPERATOR'S CERTIFICATE.
E This is to certify that the
bearer.....
resident of.....
is a British subject and is certified by the
local Superintendent of the Marconi Wireless

Telegraph Company of Canada to have the necessary technical proficiency for the position of wireless operator having acted as such on the steamer.....plying upon the territorial waters of Newfoundland from.....to.....
He has subscribed to the Oath of Secrecy and understands that this certificate is a provisional one, valid for not more than six months from the date of issue inscribed hereon.
Issued in accordance with the London Convention, 1912, and the Wireless Telegraphy

(Steamers) Act, 1914, Newfoundland Legislature, and regulations made thereunder.

General Post Office,

St. John's, Newfoundland.

..... day of

Minister of Posts and Telegraphs,
Newfoundland.

AMATEUR EXPERIMENTAL LICENSE.

192.... LICENSE No.....

DOMINION OF NEWFOUNDLAND.

LICENSE TO USE RADIOTELEGRAPHY.

F Issued in accordance with the provisions of the London Convention, 1912, and the Post and Telegraphs Amendment Act, 1906, and these Regulations made thereunder.

The herein named..... resident of..... herein called the licensee, is hereby licensed to establish and operate an experimental radiotelegraph station situated at..... for the term of one year commencing on the..... day of..... and terminating on the..... day of..... and to install and operate at such station the apparatus mentioned in the schedule hereto, on payment of the sum of One Dollar (\$1) being the license fee for the privilege above named.

This license is subject to the said Act and Regulations and to the following terms, conditions and restrictions:—

1. In this license, the term "Minister" means the Minister of Posts and Telegraphs service for the time being.

2. (1) The licensee shall not establish, install or operate any apparatus for radiotelegraphy, except the apparatus hereinafter called the "licensed apparatus" specified in the said schedule hereto, nor use wavelengths other than those specified therein.

(2) The licensee shall work the licensed apparatus solely for the purpose of conducting experiments in radiotelegraphy and for no other purpose whatever.

3. (1) The licensee shall so work the licensed apparatus as not to interfere with the working of any radiotelegraph station established in Newfoundland or the territorial waters abutting on the coasts of Newfoundland (whether on shore or on any ship), by or for the purposes of the Minister of any Department of His Majesty's Government or for commercial purposes and in particular with the sending or receipt of any messages between or at radiotelegraph stations established as aforesaid on land and radiotelegraph stations established on ships at sea.

3. (2) With a view to preventing such interference as aforesaid the licensee shall comply with all directions which shall be given to the licensee by the Minister and with all rules prescribed by the Minister for observance by his licensees:—

(a) With respect to all arrangements to be adopted for the purpose of securing syntonised apparatus or for enabling the messages exchanged by means of the licensed apparatus to be distinguished from those emanating from any other radiotelegraph station;

(b) Generally with respect to avoiding interference between one radiotelegraph station and another.

4. The licensed apparatus shall not, without the consent of the Minister, be altered or modified in respect of any of the particulars mentioned in the schedule hereto.

5. (1) The coupling between the primary and the secondary circuits of the oscillation transformer shall not be closer than that which gives a difference of 5 per cent. between the mean wavelength and either of the two waves emitted by the coupled circuits.

5. (2) The logarithmic decrement per whole period, of the emitted waves, shall not exceed two-tenths.

6. The licensee shall not divulge to any person (other than the properly authorised officials of the Government or a competent legal tribunal) or make any use whatever of any message coming to the knowledge of the licensee and not intended for receipt by means of the licensed apparatus.

7. The Minister or his officers may, from time to time and at all reasonable times, enter upon the herein licensed station, for the purpose of inspection, and may inspect any apparatus fixed or in use in such station, for the purpose of sending and receiving messages by radiotelegraphy and all other telegraphic instruments and apparatus fixed or being in such stations and the working and user of such apparatus and telegraphic instruments respectively.

8. All apparatus used or intended to be used by the licensee shall be so erected, fixed, placed and used as not, either directly or by reason of the working or user thereof, to interfere with the efficient or convenient maintenance, working or user of any telegraphic line.

9. The licensee shall at all times indemnify the Minister against all actions, claims and demands which may be brought or made by any corporation, company or person in respect of any injury arising from any act licensed or permitted by these presents.

10. The licensed apparatus shall only be worked by a person, or persons, holding an Amateur Experimental Certificate of Proficiency in Radiotelegraphy.

11. The licensed apparatus shall be operated in accordance with the Regulations issued by the Minister and in accordance with such provisions of the International Radiotelegraph Convention as are applicable to such operation.

12. Except with the consent in writing of the Minister, the licensee shall not assign or sublet this license.

13. (1) The Minister may at any time in his absolute discretion give notice in writing to determine these presents and the license or permission hereby given at the end of one calendar month from the date of such notice, and at the expiration of that period the license or permission hereby granted shall cease and determine accordingly, but without prejudice to any remedy of the Minister under any provision herein contained on the part of the licensee to be observed and performed.

(2) The licensee shall, if so required by the Minister, cease to use the licensed apparatus for such period as may be specified by the Minister.

14. In case of any breach, non-observance or non-performance by or on the part of the licensee of any of the terms or conditions herein contained and on the part of the licensee to be observed and performed, then and in any such case, the Minister may, by writing, revoke and determine these presents and the licenses, powers and authorities hereinbefore granted, and thereupon these presents, and the said licenses, powers and authorities and each and every of them shall absolutely cease, determine and become void.

15. Nothing in these presents contained shall prejudice or affect the right of the Minister, from time to time, to establish, extend, maintain and work any system or systems of radiotelegraphic communication (whether of a like nature to those hereby licensed or otherwise) in such manner as he shall in his discretion think fit, neither shall anything herein contained prejudice or affect the right of the Minister, from time to time, to enter into agreements for or to grant licenses relative to the working and use of radiotelegraphs (whether of a like nature to those hereby licensed or otherwise), or the transmission of messages in any part of Newfoundland, by means of radiotelegraphy, with or to any person or persons whomsoever upon such terms as he shall, in his discretion, think fit.

16. Any notice, request or consent (whether expressed to be in writing or not), to be given by the Minister under these presents may be under the hand of any authorised officer, for the time being, of the Department of the Postal Telegraph Service, and may be served by sending the same by registered post letter to the licensee, and any notice to be given by the licensee, under these presents, may be served by sending the same by registered post letter addressed to the Minister of Posts and Telegraphs, St. John's Newfoundland.

SPECIAL REGULATIONS FOR AMATEUR EXPERIMENTAL STATIONS.

1. At amateur experimental stations the power used measured at the terminals of the transformer must not exceed $\frac{1}{2}$ kw.

2. The wavelengths which may be used vary with the distance between the licensed station and any commercial coast or land station or a route of navigation as follows :—

For transmission :—

Class I—Station located within five miles of a commercial coast or land station or a route of navigation, shall not use a transmitting wavelength greater than 50 metres.

Class II—Stations located more than five but less than 25 miles from a commercial coast or land station or a route of navigation, shall not use a transmitting wavelength greater than 100 metres.

Class III—Stations located more than 25 but less than 75 miles from a commercial coast or land station or route of navigation, shall not use a transmitting wavelength greater than 150 metres.

Class IV—Stations located more than 75 miles from a commercial coast or land station or route of navigation, shall not use a transmitting wavelength greater than 200 metres.

3. A distinctive call signal shall be allotted to each station commencing with the figure "8," e.g., 8AA, 8AB, which signal must be sent not less than three times at the termination of every transmission.

4. The Regulations of the International Radiotelegraph Convention, where applicable, be observed by the station.

5. The station must take every precaution to prevent interference with the working of other stations.

6. The station, when operating, must listen for the signal "STP" which will indicate that an amateur experimental station is interfering with commercial business.

7. The latter signal will only be made use of by certain authorised Government stations and will not be used unless absolutely necessary. The signal "STP" will, whenever possible, be preceded by the call signal allotted to the amateur experimental station to which the interference is attributed and will be followed by the call signal of the Government station. On receipt of the "STP" signal, all amateur experimental stations will cease to operate until the Government station gives the signal "Cancel STP."

8. The aerial must be connected to the transmitting apparatus only when actual communication is in progress or when measurements are being taken. At all other times such as when the spark is being tested or sending is being practised the aerial must be disconnected.

NEW GUINEA (Late German New Guinea)

(See also Map Section)

Including : New Guinea, Kaiser Wilhelm's Land, Bismarck Archipelago (New Britain, New Ireland, The Admiralty Islands), Solomon Islands, Hermit Islands, Naurii Islands, Papua.

THESE territories were the possessions of Germany in the Western Pacific, which, as a result of the mandate from the League of Nations, December 17th, 1920, are now under the administration of the Australian Commonwealth.

CONTROL AND ORGANISATION.

Up to the time of going to press we have been unable to obtain any special information relating to wireless in these territories. The laws and regulations of the Australian Commonwealth are, however, to be found under the section of that heading.

NEW IRELAND

(See under NEW GUINEA.)

NEW ZEALAND

(See also Map Section)

Including : Auckland Island, Chatham Islands, The Cook and other Pacific Islands, Kermadec Islands.

THE Dominion of New Zealand lies about 1,200 miles south-east of the mainland of Australia, and consists of three main islands in the South Pacific Ocean, known as the North, South, and Stewart Islands. They stretch between $33^{\circ} 0'$ and $53^{\circ} 0'$ S. latitude; their longitude varying from $160^{\circ} 0'$ E. to $173^{\circ} 0'$ W. The Colony includes several groups of smaller islands, and lying at some distance from those which form the centre of the Dominion. The total area is about 103,581 square miles with a population of 1,221,447 exclusive of aborigines.

The initial discovery is attributed to the Dutch explorer, Abel Jansen Tasman, who visited the South Island on December 13th, 1642. The first settlement of Europeans was made in 1814, British sovereignty was proclaimed in 1840, and the independence of the Colony dates from May 3rd, 1841. The constitution rests upon the Act of 1852, under which the Executive authority is vested in a Governor-General assisted by a Council of Ministers with a legislature of two houses.

CONTROL.

The Post and Telegraph Department is responsible for the administration of wireless telegraphy in New Zealand. The permanent head of this Department is the Secretary of the General Post Office at Wellington.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Hon. Mr. J. G. Coates	Postmaster-General and Minister of Telegraphs.	Wellington
Mr. R. B. Morris	Secretary, Post and Telegraph Department	Wellington
Mr. A. T. Markman	First Assistant Secretary	Wellington
Mr. G. McNamara	Assistant Secretary	Wellington
Mr. E. A. Shrimpton, M.I.E.E. ..	Chief Telegraph Engineer	Wellington
Mr. A. Gibbs, M.I.E.E.	Deputy Chief Telegraph Engineer ..	Wellington
Mr. H. A. Huggins	Controller of Savings Bank and Accounts	Wellington

AMATEURS.

In order to meet the growing demand for permission to experiment in wireless telegraphy, the Department issued in April, 1921, what are called "provisional permits," authorising the use of wireless receiving apparatus for experimental or instructional purposes, the conditions of the permits being designed to prevent interference with the conduct of public wireless-telegraph work. The interest that is being taken in the subject by wireless enthusiasts in New Zealand is indicated by the fact that over 800 of these permits have already been issued. It is intended shortly, to replace the permits by formal licenses.

Up to the present time the issue of licenses for experimental and broadcasting transmissions has been confined to persons engaged in the scientific study of radio problems or closely connected with the manufacture of wireless apparatus from a technical or a commercial point of view. Regulations which provide for the issue of formal transmitting and broadcasting licenses to approved applicants are now in course of preparation.

ORGANISATION.

The first wireless installation was placed in the tower of the General Post Office at Wellington in June, 1910, and experiments were carried out with different wireless systems. Later on a "Telefunken" set was installed, and a wireless telegraph office opened for commercial work on July 26th, 1911. At that time there were not more than half a dozen ships fitted with wireless apparatus trading to the Dominion; now the majority of New Zealand ships carry wireless apparatus, as well as a large number of vessels registered in other countries and trading to New Zealand ports.

On October 14th, 1912, the G.P.O. station was replaced by one of $2\frac{1}{2}$ -kW. upon Mount Wakefield, immediately behind the City of Wellington. At this station, known as "Radio-Wellington," a continuous service is maintained.

On October 24th, 1912, a $2\frac{1}{2}$ -kW. station was established on the roof of the Post Office at Auckland. The normal range of these $2\frac{1}{2}$ -kW. stations is 300 miles by day and 600 miles by night.

The installation of a wireless set of $2\frac{1}{2}$ -kW. power on the Government cable steamer *Tutanekai* was completed on June 20th, 1912. The equipment has been found to be of much service in aiding in the work of the repair of submarine cables.

A wireless station was opened at CHATHAM ISLANDS on September 18th, 1913, connecting this group of islands with the mainland of New Zealand and extending the range of communication eastward.

The high-power stations at Awanui and Awarua were opened for public business on December 18th, 1913. These stations are of 30 kW. primary power Telefunken system, and were undertaken primarily for defence purposes. They are required to communicate with Sydney during the day as well as at night. The high power station at Apia (Samoa) and the low power station at Rarotonga (Cook Islands) are under the control of the New Zealand Government.

At the present time five stations in New Zealand are open for public service with ships.

ADMINISTRATION.

In July, 1914, regulations were made for the control of ships carrying wireless telegraph apparatus while within the territorial waters of New Zealand. The Regulations relating to ship stations were also amended by new Regulations issued on September 7th, 1914.

Broadcasting regulations will be introduced at an early date, but at the time of going to press they have not been definitely settled.

A—Extracts from the Post and Telegraph Act (Part X), 1908.

B—Extracts from Amendment Acts of 1911, 1913, and 1920.

C—Regulations under Order in Council, January, 1918.

D—Regulations (affecting ships registered in New Zealand).

E—Regulations as to ships being provided with Wireless (October, 1913).

F—Form of Ship License.

G—Provisional Permit for Wireless Receiving Apparatus.

POSTS AND TELEGRAPHS ACT.

A The following extracts from Part X of the Post and Telegraph Act, 1908, and from the Post and Telegraph Amendment Acts, 1911, 1913, and 1920, relate to wireless telegraphy in the Dominion:—

162. The Governor may from time to time establish stations for the purpose of receiving and transmitting telegraph messages within New Zealand or between New Zealand and parts beyond New Zealand by what is commonly known as "wireless telegraphy," including in that expression every method of transmitting messages by electricity otherwise than by wires, whether such method is in use at the time of the coming into operation of this Act, or is hereafter discovered or applied.

163. The provisions of Part VII of this division of this Act shall, as far as is applicable, *mutatis mutandis*, extend and apply to stations established under this part of this Act, and to communications by wireless telegraphy.

164. Every person who erects, constructs, or establishes any station or plant capable of transmitting or receiving wireless telegraphic signals otherwise than in accordance with a license granted by him in that behalf by the Minister of Telegraphs is liable to a fine not exceeding five hundred pounds, and any plant, machinery, instruments, and material used by him for such purpose may be forfeited and dealt with as the Minister directs.

Part VII of this division of the Act referred to deals with the construction and regulation of electric lines. It authorises the Governor to establish electric lines and purchase lines and plant. He may make regulations as to the management, working and maintenance of any telegraph. Any officer or person employed in the working of any telegraph who improperly divulges the contents of any telegram transmitted or presented for transmission by such telegraph, or the purport of such telegram, is liable to a fine not exceeding one hundred pounds, or to imprisonment with hard labour for any period not exceeding six months.

EXTRACTS FROM AMENDMENT ACTS OF 1911, 1913 AND 1920.

POST AND TELEGRAPH (AMENDMENT) ACTS, 1911 AND 1920.

B The Minister of Telegraphs may, in accordance with regulations to be made in that behalf by the Governor-General in Council, grant licenses to any person, association, or corporation for the installation and working within New Zealand, or on board any ship registered in New Zealand, of apparatus for wireless telegraphy, within the meaning of Part X of the principal Act.

(2) Subject to any such regulation, every such license shall be in such form and for such period and shall contain such terms, conditions, and restrictions, as the Minister of Telegraphs thinks fit.

(3) The Governor may by Order in Council make such regulation as he thinks proper as to the granting of such licenses, and as to the form, period, terms, conditions, and restrictions thereof and as to the fees payable in respect thereof.

POST AND TELEGRAPH (AMENDMENT) ACT 1913.

9. (1) The Governor may from time to time, by Order in Council, make such regulations as he thinks proper governing the use of wireless telegraph apparatus on merchant ships whether

foreign ships or British ships not registered in New Zealand, while within the territorial waters of New Zealand.

(2) Such regulations may provide for the detention of any merchant ship on which a breach of the regulations has been made, pending the institution and determination of proceedings in respect of such breach and the recovery of any fine imposed in respect thereof.

REGULATIONS.

FOR CONTROL OF SHIPS CARRYING WIRELESS TELEGRAPH APPARATUS WHILE WITHIN TERRITORIAL WATERS OR HARBOURS OF NEW ZEALAND.

LIVERPOOL, Governor-General.

ORDER IN COUNCIL.

At the Government House at Wellington, this 30th day of January, 1918.

Present.

HIS EXCELLENCY THE GOVERNOR-GENERAL IN COUNCIL.

C Whereas, by Order in Council dated July 13th, 1914, and published in the *New Zealand Gazette*, of July 16th, 1914, regulations were made, under the authority of Section 9 of the Post and Telegraph Amendment Act, 1913 (hereinafter termed "the said Act"), for the control of ships carrying wireless telegraph apparatus while within the territorial waters of New Zealand:

And whereas it is desired to revoke such regulations, and to make others in lieu thereof:

Now, therefore, His Excellency the Governor-General of the Dominion of New Zealand, in pursuance and exercise of the power and authority conferred upon him by the said Act, and acting by and with the consent of the Executive Council of the said Dominion, doth hereby revoke the regulations hereinbefore mentioned, and in lieu thereof doth hereby make the regulations set forth in the schedule hereto; and doth hereby order that such regulations shall have effect on and from the date of publication of this Order in Council in the *New Zealand Gazette*.

SCHEDULE.

REGULATIONS.

1. In these regulations, if not inconsistent with the context:—

"Territorial waters of New Zealand" means and includes all tidal waters included within the Dominion of New Zealand, and all parts of the open sea within one marine league of the coasts of that Dominion measured from low-water mark.

"In harbour" means inside any harbour in New Zealand or within three miles of the entrance of any such harbour which a ship is about to enter or leave.

"Minister of Telegraphs" means the Minister of Telegraphs for the time being.

"Wireless telegraphy" has the same meaning as in Section 162 of the Post and Telegraph Act, 1908.

"Telegraph" has the same meaning as in section 119 of the Post and Telegraph Act, 1908.

"Naval signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and naval stations, or between a ship of His Majesty's Navy or a naval station and any other wireless telegraph station, whether a coast station or a ship station.

"The Admiralty" means the Commissioners for executing the office of Lord High Admiral of the United Kingdom of Great Britain and Ireland.

“Coast station” means a wireless telegraph station which is established on land or on board a ship permanently moored, and which is open for the service of correspondence between the land and ships at sea.

“Ship station” means a wireless telegraph station established on board a ship which is not permanently moored.

2. These regulations shall apply only to foreign merchant ships and to British merchant ships not registered in New Zealand, while such British or foreign ships are within the territorial waters of New Zealand, or in harbour.

3. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

SHIPS IN TERRITORIAL WATERS.

4. All apparatus for wireless telegraphy on board a merchant ship while in the territorial waters of New Zealand shall be worked in such a way as not to interfere with naval signalling, or with the working of any wireless telegraph station lawfully established, installed, or worked, in the Dominion of New Zealand or the territorial waters thereof; and, in particular, the said apparatus shall be so worked as not to interrupt or interfere with the transmission of messages between wireless telegraph stations established on ships at sea and wireless telegraph coast stations.

5. If and whenever an emergency shall have arisen in which it is expedient in the public interest that His Majesty's Government shall have control over the transmission of messages by the said apparatus, and it shall be lawful for any officer of His Majesty's Navy or Army, or for any other person authorised in that behalf by the Admiralty, or by the Minister of Telegraphs, to take possession of or to cause the said apparatus or any part thereof to be taken possession of in the name and on behalf of His Majesty, and to be used for His Majesty's service, and, subject thereto, for such ordinary services as to the said officer or person may seem fit; and in that event any person authorised by the said officer or person may enter upon any ship on which such apparatus is installed and take possession of the said apparatus and use the same as aforesaid.

6. Any such officer of person may in such event as aforesaid, instead of taking possession of the said apparatus as aforesaid, direct and authorise such persons as he may think fit to assume the control of the transmission of messages by the said apparatus, either wholly or partly, and in such manner as he may direct, and such persons may enter upon any ship on which the said apparatus is installed accordingly; and the said officer or person may direct the person or persons in charge of the said apparatus to submit to him, or any person authorised by him, all messages tendered for transmission or arriving by the said apparatus, or any class or classes of such messages, to stop or delay the transmission of any messages, or deliver the same to him or his agent, and generally to obey all such directions with reference to the transmission of messages as the said officer or person may prescribe, and the said person or persons in charge of the said apparatus shall obey and conform to all such directions.

SHIPS IN HARBOUR.

7. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in harbour, except with the consent in writing of the Minister of Telegraphs.

PENALTIES.

8. If any breach of these regulations is committed by any person on board any ship while in the territorial waters of New Zealand or in harbour, the person so committing the same and the owner and master of the ship shall be severally liable on summary conviction to a fine not exceeding £100.

(Clauses 9-12 deleted.)

13. Whenever the Minister of Telegraphs or the Secretary of the Post and Telegraph Department has reasonable cause to believe or suspect that any breach of these regulations has been committed on board any ship while in the territorial waters of New Zealand, or in harbour he may give notice in writing to the Collector of Customs at any port in New Zealand to detain the ship under section 9 of the Post and Telegraph Amendment Act, 1913, until the sum of £100, or such smaller sum as may be specified in the notice, has been deposited with the Collector by or on behalf of the owner of the ship.

14. If on the receipt of that notice, or at any time within three months thereafter, the ship is found within such port, the Collector of Customs shall withhold the certificate of clearance of the ship, under section 35 of the Customs Act, 1913, until and unless the aforesaid sum is deposited with him or the aforesaid notice of detention is withdrawn.

15. If within six months after the date of the offence in respect of which the ship has been detained a conviction for that offence is obtained against any person, the sum so deposited shall be available for the satisfaction of any fine and costs imposed or awarded by the conviction, and the residue, if any, shall be returned to the person by whom or on whose behalf the deposit was made.

16. If within the period of six months aforesaid no such conviction is obtained, the sum so deposited shall be returned to the person by whom or on whose behalf it was deposited.

J. F. ANDREWS,
Clerk of the Executive Council

WIRELESS TELEGRAPH REGULATIONS FOR SHIP STATIONS.

AFFECTING SHIPS REGISTERED IN NEW ZEALAND.

Whereas by Order in Council dated the twentieth day of November, one thousand nine hundred and eleven and published in the *New Zealand Gazette* of the twenty-third day of November, one thousand nine hundred and eleven, regulations were made under the authority of the Post and Telegraph Amendment Act, 1911 (hereinafter termed “the said Act”), as to the granting of licenses for the installation and working of apparatus for wireless telegraphy on board any ship registered in New Zealand, and whether on the high seas or in New Zealand waters, and as to the form, period, terms, conditions, and restrictions thereof, and as to the fees payable in respect thereof: And whereas it is desirable to revoke such regulations, and to make others in lieu thereof.

Now, therefore, His Excellency the Governor of the Dominion of New Zealand, in pursuance and exercise of the power and authority conferred upon him by the said Act, and of all other powers and authorities in that behalf enabling him, and acting by and with the advice and consent of the Executive Council, of the said Dominion, doth hereby revoke the regulations made by the above-mentioned Order in Council, and in lieu thereof doth hereby make the following regulations for the

LICENSE FOR THE INSTALLATION AND WORKING OF APP

purposes hereinbefore mentioned; and doth hereby order that such regulations and the revocation of the regulations first before recited shall have effect on and from the date of publication of this Order in Council in the *New Zealand Gazette*.

REGULATIONS.

1. In these regulations, if not inconsistent with the context:—

"Minister of Telegraphs" means the Minister of Telegraphs for the time being.

"Wireless Telegraphy" has the same meaning as in Section 162 of the Post and Telegraph Act, 1908.

"Telegraph" has the same meaning as in Section 119 of the Post and Telegraph Act 1908.

"Naval signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and naval stations, or between a ship of His Majesty's Navy and a naval station and any other wireless telegraph station, whether a coast station or a ship station.

"The Admiralty" means the Commissioners for executing the office of Lord High Admiral of the United Kingdom of Great Britain and Ireland.

"The International Telegraph Convention" and the "International Telegraph Regulations" means respectively the International Convention of St. Petersburg dated the 10th-22nd July, 1875, and the service regulations made thereunder; and include respectively any modifications of the convention or regulations made from time to time.

"The Radiotelegraph Convention, 1912," means the convention signed at London on the 5th day of July, 1912, and the service regulations made thereunder; and includes any modification of the convention or regulations made from time to time.

"Coast station" means a wireless telegraph station which is established on land or on board a ship permanently moored, and which is open for the service of correspondence between the land and ships at sea.

"Ship station" means a wireless telegraph station established on board a ship which is not permanently moored.

2. The Minister of Telegraphs may, at the request of any person or company desirous of establishing, installing, working, and using on ships belonging to such person or company, and registered in New Zealand, apparatus for wireless telegraphy, grant to such person or company (hereinafter called "the licensee") a licence, in the form of the Schedule hereto, for the period, upon the terms, and subject to the conditions and restrictions hereinafter appearing.

3. Each ship station is bound to exchange radiotelegrams with any coast station, or with any other ship station, without distinction as to the radiotelegraph system adopted by that station.

4. Each ship station shall be of such class mentioned in Article 13 of the Service Regulations annexed to the Radiotelegraph Convention, 1912, as is specified in the licence issued in respect thereof, and the equipment of the station, hours of duty observed, and other requirements shall be appropriate to such class in accordance with the provisions of the Radiotelegraph Convention, 1912.

5. The apparatus used at all ship stations shall, as far as possible, be in keeping with scientific and technical progress. The waves emitted must be as pure and as little damped as possible.

6. The apparatus must be capable of transmitting and receiving at a speed of at least equal to twenty words per minute, the word being reckoned at the rate of five letters.

7. The apparatus shall be so constructed as to be capable of using wavelengths of 600 to 300 metres as measured by the standard of measurement in use by the Post and Telegraph Department for the time being; and such

Character of Apparatus.		Power.		
System of Radiotelegraphy with the Characteristics of the System of Emission.	Wave-lengths (in Metres).	Source and Maximum Output.	Maximum to be normally taken by Sending Instruments.	If Alternator is used, Number of Cycles per Second.
(8)	(9)	(10)	(11)	(12)

other wavelengths not exceeding 600 metres as shall be authorised from time to time by the Minister of Telegraphs; Provided always that the wavelength of 600 metres shall normally be used for communication, and, further, that the wavelength of 1,800 metres may be used for transmission in the exceptional case referred to by Article 35 (2) (a) of the Service Regulations annexed to the Radiotelegraph Convention, 1912: Provided, further, that only wavelengths of 600 metres shall be used by the licensee during the period of any war in which the United Kingdom is engaged.

8. The licensed apparatus shall not be used by the licensee, or by any other person either on behalf or by permission of the licensee, for the transmission or receipt of messages except messages authorised by these regulations; and the licensee shall not, except with the consent in writing of the Minister of Telegraphs, send or receive messages from or at the licensed apparatus when in any harbour in the Dominion of New Zealand.

9. (1) The licensee shall not by the transmission of any message by means of the licensed apparatus or otherwise by the use of the licensed apparatus, interfere with naval signalling.

(2) If the Admiralty are of opinion that the working of the licensed apparatus at any ship station is inconsistent with the free use of naval signalling, the licensee shall, when required in writing by the Minister of Telegraphs so to do, close the said station.

(3) These provisions for the protection of naval signalling shall be construed to be without prejudice to the generality of any other provisions of the license.

provisions of the license.

10. The licensee shall observe the International Telegraph Convention and International Telegraph Regulations so far as the said convention and regulations are capable of being applied to wireless telegraphy in common with ordinary land and submarine telegraphy.

II. The licensee shall observe the provisions of any regulations from time to time made under the provisions of the Post and Telegraph

Act, 1908, and its amendments, by the Governor in Council or by the Minister of Telegraphs in relation to the conduct of wireless telegraph business, so far as the same are applicable to the licensee.

12. The licensee shall observe the provisions of the Radiotelegraph Convention, 1912.

13. The licensee shall comply with all such directions and observe all such rules as may be given or made by the Minister of Telegraphs from time to time for the purpose of preventing interference with the working of any other wireless telegraph station, and for enabling the messages exchanged by means of the licensed apparatus to be distinguished from those emanating from any other wireless telegraph station.

14. The licensed apparatus shall not, without the consent of the Minister of Telegraphs be altered or modified in respect of any of the particulars referred to in the license issued in respect thereof, and such apparatus shall at all times be maintained in good working order.

15. Except as provided in these regulations, the licensee shall transmit messages by means of the licensed apparatus on equal terms, without favour or preference, whether as regards rates of charge, order of transmission, or otherwise.

16. The licensee shall, so far as possible, receive from ships and light stations all requests for assistance and all signals of distress, and shall answer such requests and signals and retransmit them with the least possible delay, and with priority over all other messages to the proper authorities by means of the licensed apparatus or by any other means in the power of the licensee.

17. The licensed apparatus at ship stations shall be worked only by a person or persons holding a certificate or certificates issued or recognised by the Minister of Telegraphs. Certificates shall be granted to persons of British nationality possessing the qualifications prescribed by the Radiotelegraph Convention, 1912, and shall be in such form and subject to such conditions, directions, or rules as the Minister of Telegraphs shall from time to time

prescribe: and such certificates may at any time be withdrawn at the discretion of the Minister of Telegraphs in case of misconduct, or breach on the part of the holder of the Radiotelegraph Convention, 1912, or of any conditions, directions, or rules prescribed by the Minister of Telegraphs for the guidance of operators or for the working of such ship stations.

18. (1) The licensee, his servants and agents, shall not divulge the contents or the purport of the contents of any message, or make any use whatever of any message coming to his or their knowledge, other than to the addressee or his authorised agent, or to properly authorised officials of His Majesty's Government or of the Minister of Telegraphs, or to a competent legal tribunal.

(2) The licensee shall render to the Minister of Telegraphs such accounts as the Minister of Telegraphs shall direct in respect of all charges due or payable under the Radiotelegraph Convention, 1912, in respect of messages exchanged between the licensed ship stations and coast stations, and shall pay to the Minister of Telegraphs, at such times and in such manner as the Minister of Telegraphs shall direct, all sums which shall be due from the licensee under such accounts.

19. The licensee shall keep full accounts, records, and registers of all messages transmitted by means of the licensed apparatus; and in such registers each of such messages shall be accompanied by its identifying number and date, and full particulars of its place of origin and of ultimate destination, and such further particulars as the Minister of Telegraphs shall from time to time reasonably require to be shown. The licensee shall preserve all used message forms written and printed, and transcripts of messages, and all other papers for such period as is from time to time prescribed by the Radiotelegraph Convention, 1912, and, in default of any provisions on the subject in the said convention, for such period as is from time to time prescribed by the International Telegraph Regulations; and such registers and message papers shall be open to the inspection of the Minister of Telegraphs or his authorised officers.

20. The Minister of Telegraphs, and any agent authorised in that behalf in writing by him, may at all reasonable times enter upon any licensed ship station for the purpose of inspecting, and may inspect, any apparatus fixed or being in such station for the purpose of sending and receiving messages by wireless telegraphy, and all other telegraphic instruments and apparatus fixed or being in such station, and the working and user of such apparatus and telegraphic instruments.

21. The licensee shall carry on every ship on which a ship station is established a print or copy of the license, certified under the hand of an appropriate officer of the Minister of Telegraphs to be a true copy, and shall produce such print or copy for inspection if required to do so by the competent authorities of the countries where the ship calls, and also such documents as may be prescribed by the Minister of Telegraphs for the purpose of enabling the licensee to communicate with coast stations and ship stations, in accordance with the Radiotelegraph Convention, 1912.

22. (1) Every license shall be in force from the date of the granting thereof until the 31st December of the year in which it is issued, and no longer; but may be renewed from year to year.

(2) The licensee shall pay to the Minister of Telegraphs for and in respect of the license granted, and of every renewal thereof, a royalty of 5s. in respect of each ship station included in the license.

(3) All royalties payable under any license shall be payable on the date of the granting or renewal thereof, as the case may be.

23. Except with the consent in writing of the Minister of Telegraphs, the licensee shall not assign, underlet, or otherwise dispose of or admit any other person or body to participate in the benefit of any license.

24. If and whenever an emergency shall have arisen in which it is expedient in the public interest that His Majesty's Government shall have control over the transmission of messages by the licensed apparatus, it shall be lawful for any officer of His Majesty's Navy or Army, or for any other person authorised in that behalf by the Admiralty, or by the Minister of Telegraphs, to take possession of or to cause the licensed apparatus or any part thereof to be taken possession of in the name and on behalf of His Majesty, and to be used for His Majesty's service and subject thereto for such ordinary services as to the said officer or person may seem fit; and in that event any person authorised by the said officer or person may enter upon any ship on which any such apparatus is installed and take possession of the said apparatus and use the same as aforesaid.

25. Any such officer or person may in such event as aforesaid, instead of taking possession of the licensed apparatus as aforesaid, direct and authorise such persons as he may think fit to assume the control of the transmission of messages by the licensed apparatus either wholly or partly and in such manner as he may direct, and such persons may enter upon any ship on which any apparatus is installed accordingly; or the said officer or person may direct the licensee, his servants or agents, to submit to him, or any person authorised by him, all messages tendered for transmission or arriving by the licensed apparatus, or any class or classes of such messages, to stop or delay the transmission of any messages or deliver the same to him or his agent, and generally to obey all such directions with reference to the transmission of messages as the said officer or person may prescribe, and the licensee, his servants or agents, shall obey and conform to all such directions.

26. In any of the following cases, that is to say:—

(a) In case any sum of money which ought to be paid by the licensee to the Minister of Telegraphs under or by virtue of these regulations shall be in arrear and unpaid for one calendar month after the time at which the same ought to be paid under or by virtue of the provisions herein contained; or

(b) In case of any breach, non-observance, or non-performance by or on the part of the licensee, his servants or agents, of any of the provisions (other than a provision for the payment of money) or conditions herein contained,—

then and in any such case the Minister of Telegraphs may, by notice in writing, revoke and determine the license as to all or any of the ship stations thereby licensed, and thereupon the said license shall absolutely cease, determine, and become void as to all or any of the said ship stations, as the case may be, but without prejudice to any right of action or remedy which shall have accrued to His Majesty under these regulations or otherwise.

27. Nothing in these regulations shall prejudice or affect the right of the Minister of Telegraphs from time to time to establish, extend, maintain, and work any system or systems of telegraphic communication (whether of a like nature to those licensed hereunder or otherwise) in such manner as he shall in his discretion think fit. Neither shall anything herein contained prejudice or affect the right of the Minister of Telegraphs from time to time to enter into agreements for or to grant licenses relative to the working and use of telegraphs (whether of a like nature to those licensed hereunder or otherwise) or the transmission of messages in any part of New Zealand by means of wireless telegraphy, or by any other means, with or to any person or persons whomsoever, upon such terms as he shall in his discretion think fit. And (save as in these regulations expressly provided) nothing herein contained shall be deemed to authorise the licensee to exercise any of the powers or authorities conferred on or acquired by the Minister of Telegraphs by or under the Post and Telegraph Act, 1908.

28. Any notice, request, or consent (whether required to be in writing or not) to be given by the Minister of Telegraphs under these regulations may be under the hand of the Secretary for the time being of the Post and Telegraph Department, and may be served by sending the same in a registered letter addressed to the licensee at the office or place of residence for the time being of the licensee, or, if such notice, request, or consent relates to any particular ship station, by delivery to the master of the ship upon which such station is installed; and any notice to be given by the licensee under these regulations may be served by sending the same in a registered letter addressed to the Secretary, General Post Office, Wellington.

29 All licenses heretofore issued under the regulations hereby revoked shall continue in force, subject to the regulations under which they were issued, until the expiry of the current term thereof, but shall not be capable of renewal under the regulations so revoked.

REGULATIONS

AS TO SHIPS BEING PROVIDED WITH WIRELESS TELEGRAPHY APPARATUS.

ORDER IN COUNCIL.

E At the Government House, at Wellington, this twentieth day of October, 1913.

Whereas it is enacted by Section 50 of the Shipping and Seamen Amendment Act, 1909, that the Governor may from time to time by Order in Council make regulations requiring ships registered in New Zealand, and carrying passengers, to be provided with apparatus for transmitting messages by means of wireless telegraphy, and may by such regulations prescribe fines not exceeding fifty pounds for any breach thereof by the owner or master of a ship. And whereas it is desirable to make such regulations:

Now, therefore, His Excellency the Governor of the Dominion of New Zealand, in exercise of the hereinbefore recited power and authority, and acting by and with the advice and consent of the Executive Council of the said Dominion, doth hereby make the following regulations, and doth hereby order that they shall come into force on July 1st, 1914:

Provided that, if in his opinion the circumstances justify it, the Minister of Marine may exempt any steamship from the operation of these regulations, and may limit the time for which any such exemption shall be in force.

REGULATIONS.

1. Every steamship registered in New Zealand, and carrying passengers, which is engaged in the foreign or inter-colonial trade, except steamships trading to the Chatham, Auckland, Campbell, and Antipodes Islands, and every home trade steamship which is authorised by her ordinary survey certificate to carry not less than 150 passengers at sea, shall not leave or attempt to leave any port in New Zealand unless such steamship is equipped with an efficient apparatus for radio communication in good working order, to be operated by a person skilled in the use of such apparatus, which apparatus shall be capable of transmitting and receiving messages over a distance of at least one hundred miles, day or night.

2. Ships required by these regulations to carry the apparatus prescribed above shall be placed in the third class as defined by Article XIII of the Detailed Service Regulations, appended to the International Radiotelegraph Convention, 1912—that is, they are not bound to perform any regular listening service.

3. The Minister of Marine may appoint inspectors for the purposes of these regulations, and such inspectors and superintendents of Mercantile Marine may visit any steamship required by these regulations to be equipped with apparatus for radio communication before they leave port, and ascertain if they are equipped with such apparatus the operation of which shall be carried out by a telegraphist holding a certificate as prescribed by Article X of the Detailed Service Regulations attached to the International Radiotelegraphic Convention.

4. Where a passenger steamship subject to these regulations is without the apparatus and the operator prescribed, and is about to attempt to leave port, an inspector or superintendent shall:—

(a) Notify the master of the fine to which he will be liable and of the particulars in respect of which the law has not been complied with;

(b) Notify at once the Collector of Customs, who may thereupon withhold the vessel's clearance until the requirements of these regulations are complied with;

(c) Prepare a report in writing of his action and transmit it to the Collector of Customs, who shall forward a copy to the Secretary of the Marine Department.

5. An inspector or superintendent may, at any time before a vessel subject to these regulations leaves port, require the master to give him a certificate, in the form set forth in the appendix hereto, that the wireless apparatus of his ship is sufficient and in good working order, and the master shall give such certificate before the vessel leaves port.

6. The power necessary to transmit signals shall at all times, while the vessel is under way be available for the wireless operator's use.

7. Subject to the above regulations, the installation and operation of the apparatus required by them to be fitted shall be in conformity with the requirements of the Post and Telegraph Act, 1908, and its amendments, and the regulations made thereunder.

8. Any master or owner of a steamship committing a breach of these regulations is liable to a fine not exceeding £50.

APPENDIX.

This is to certify that the wireless operator in principal charge of the apparatus for radio-communication on the s.s. " " has this day certified to me in writing that the said apparatus is efficient and in good working order.

(Signed)

Master.

LICENSE TO ESTABLISH WIRELESS TELEGRAPH SHIP STATION.

F In pursuance and exercise of the power and authority conferred upon me by section 3 of the Post and Telegraph Amendment Act, 1911, I, Minister of Telegraphs of the Dominion of New Zealand, hereby grant a license to _____ for the installation and working of apparatus for wireless

telegraphy (within the meaning of Part X of the Post and Telegraph Act, 1908), on board the ship or ships named in the Schedule hereto, and subject to the regulations providing for the working of wireless telegraphy on ship stations made by Order in Council of the seventh day of September, 1914, a copy of which is printed hereon.

Given under my hand, at Wellington, this _____ day of _____, 19____

Minister of Telegraphs

Entered in the Register of Warrants of the Minister of Telegraphs, this _____ day of _____, 19____

Secretary, Post and Telegraph Department.

POST AND TELEGRAPH DEPARTMENT.
PROVISIONAL PERMIT ISSUED BY THE MINISTER OF TELEGRAPHS.

G AUTHORIZING THE USE OF WIRELESS RECEIVING APPARATUS FOR EXPERIMENTAL OR INSTRUCTIONAL PURPOSES AS INDICATED HEREON.

PARTICULARS REGARDING PERMITTEE AND APPARATUS.

Name of person to whom the permit is issued, and where applicable, the body on whose behalf the permit is held:—

Address:—

Location of apparatus:—

Purpose for which apparatus authorised (experimental or instructional):—

THIS PERMIT authorises the person or body referred to herein to use for experimental/instructional purposes wireless receiving apparatus subject to the conditions hereinafter mentioned. The Permit is a provisional one and will subsequently be replaced, where circumstances justify the same, by a license.

The Permit is subject to withdrawal or cancellation at any time when, in the opinion of the Minister of Telegraphs, such action becomes necessary.

Any breach of the conditions referred to will result in withdrawal or cancellation of the Permit and will be regarded *per se* as indicating the unfitness of the Permittee to receive a regular license.

While it is the intention to give every reasonable facility to persons or bodies who are in any way likely to further the interests of wireless science or of radio communication, and who are not actuated solely by motives of amusement, it should be distinctly understood that the Minister of Telegraphs is charged *inter alia* with the responsibility for the uninterrupted carrying-on of the public radio services, for the secrecy of public radio correspondence, and for the reliable detection of Distress Signals upon which depends in a great measure the safety of life at sea. These facts render it imperative that the following conditions should be strictly observed, and Permittees are therefore enjoined to co-operate with the Post and Telegraph Department in every possible way

with a view to ensuring the furtherance of the objects mentioned.

Secretary, Post and Telegraph Department.
Date

Signature of Permittee.

Witness:

Radio Inspector.

Date:

CONDITIONS UNDER WHICH PERMIT IS ISSUED

1. "Radio Inspector" in this Permit means the District Telegraph Engineer of the district in which the wireless receiving station is situated, or such officer or officers as may be deputed by him. "Permittee" means the person in whose name the Permit is issued, and who is held responsible for the due observance of the following conditions:—

2. *Object of Permit.*—This Permit authorises the use of the wireless receiving apparatus described in Schedule A, or such modification thereof as may subsequently be approved in writing by the Radio Inspector.

3. *Alterations to Apparatus.*—Any change that is contemplated in the type or characteristics of the receiving apparatus referred to in Schedule A must first be notified in writing to the Radio Inspector and be accompanied where necessary by descriptive diagrams. These changes must not be effected until the written sanction of the Radio Inspector has been obtained. This precaution is necessitated mainly on account of the highly "interfering" properties of valve receivers operating under certain conditions, and it should be clearly understood by Permittees authorised to use valve receivers that serious interference may actually result from the same within a radius of ten miles of a public radio station.

4. *Amateur Warning Signal.*—When using valve receivers within ten miles of a Government Radio Coast Station, Permittees must continually listen for the Amateur Warning Signal from such station—*viz.*, A.A.A.A.Q.R.M. (followed by a figure indicating minutes), and must immediately cease operations upon receipt of the same until the time indicated has expired. In this connection the greatest care must be exercised on the part of the Permittee to avoid interfering with the receipt and handling by radio stations open for public correspondence of the International Distress Signal, SOS.

5. *SOS Signals: Procedure.*—If, in connection with his use of the authorised apparatus any Distress Signals should come under the notice of the Permittee, and there is reason to believe that such signals have not been intercepted by a radio station open to public correspondence, the Permittee shall immediately take such steps as may be available (*e.g.*, by telephone) for communicating the same to the nearest Government radio station, or, if this be impracticable, to a responsible officer of the Post and Telegraph Department.

6. *Custody of Apparatus.*—The wireless apparatus authorised by this Permit shall be kept in secure custody, and no part of the same shall be removed from its authorised location without the approval of the Radio Inspector.

7. *Inspection of Apparatus.*—The wireless apparatus shall be subject to inspection by the Radio Inspector at all times, and every facility shall be given to such officer to carry out any inspection or test that may be considered necessary

8. *Supervision by Permittee.*—The apparatus shall not be brought into operation for any purpose in the absence of the Permittee or apart from his supervision, and in order to safeguard this requirement the Permittee must see that Condition 6, requiring the apparatus to be kept in safe custody, is faithfully observed.

9. *Declaration of Secrecy.*—The Permittee shall be required to execute a Declaration of Secrecy which provides that he shall not divulge to any unauthorised person any information relating to public radio correspondence which may come to his knowledge, and that he will by every means in his power seek to preserve the secrecy of the same. Exception is made in the case of meteorological and time signals which are broadcasted for general information. Any breach of this condition will be seriously noticed. The Permittee shall not commit to writing any such public radio correspondence that may come to his knowledge, and shall be responsible for seeing that no unauthorised person is permitted to become acquainted with the same. In the case of bodies for whom the Permittee may be acting in a representative capacity, the latter shall be held responsible for satisfying the Radio Inspector that all members of the body having access to the apparatus shall first have executed the Declaration of Secrecy. The apparatus shall be regarded as under the direct supervision of the Permittee, but, in order to facilitate the work of such body, the responsibility of supervision may be shared with one or more approved persons, as may be arranged in writing with the Radio Inspector. These responsible supervisors shall be present whenever the apparatus is being used, and shall supervise such use with the object of ensuring that all the conditions of the Permit, particularly those relating to the Amateur Warning Signal, to Distress Signals, and to the secrecy of public correspondence, are strictly observed.

10. *Log Record.*—The Permittee shall keep a log record showing the hours during which the authorised apparatus is in operation and embodying a record of the reception of any of the special signals referred to in Condition 4. This log shall be produced for perusal by the Radio Inspector whenever required.

11. *Temporary Disuse of Apparatus.*—Apart from the requirements of Condition 4, the use of the apparatus shall cease at any time and for any period that may be considered necessary by the Radio Inspector.

12. *Amendment of Conditions.*—The Permittee shall be prepared and shall be required to comply with any amended or additional conditions that circumstances may from time to time render it necessary to impose.

SCHEDULE A.

DESCRIPTION OF WIRELESS RECEIVING APPARATUS AUTHORISED UNDER THIS PERMIT.

NICARAGUA

(See also Map Section)

THIS Central American State lies between Costa Rica on the south and Honduras on the north. Its area is estimated at 49,200 square miles, and it possesses a coast line of about 300 miles on the Atlantic, whilst that on the Pacific Ocean stretches for about 200 miles. It has a population of 638,119.

The present constitution came into force on April 5th, 1913. It vests the executive functions in a President, and the legislative power in a Congress of two houses. On February 18th, 1916, a treaty between Nicaragua and the United States was ratified, which laid down the conditions for the acquisition by the latter of naval bases on the Pacific and Atlantic coasts and of the projected canal route.

CONTROL.

The control of wireless telegraphy and telephony is in the hands of the Government, under the direction of the Minister of Public Works and the Director-General of Communications.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
General Tomás Masís	Minister of Public Works	Managua.
Mr. Paulino Solórzano	Director-General of Communications	Managua.

ORGANISATION.

With regard to wireless telegraphy, none of the installations at present existing in Nicaragua is owned by the Government. The United States Government possesses a station in Managua, the capital of the Republic, and there are two stations owned by private companies on the Atlantic Coast. These stations (with the exception of that owned by the American Government) have been erected under contract with the Government of the Republic, and are subject to the provisions of the London Radiotelegraphic Convention of 1912. Only one of them is open to public service with ships.

The United Fruit Co. erected in 1906, a radiotelegraphic station at Bluefields for correspondence with the United States and Europe. They also owned a station at Rama, situate on the Escondido River, about 40 miles above Bluefields, but this was abandoned when the Company discontinued its banana producing and exporting activities in Nicaragua.

A small station has also been erected at the Eden Mines in Pis Pis mining district at the expense of the company, and is used exclusively by the firm.

The Mexican Government have offered the Government of Nicaragua a wireless station, which will be erected in, or in the neighbourhood of the town of, Managua. It will be used for public correspondence for both land and ship stations.

A receiving station has recently been installed at the Administration General of Communication for press and time (75 meridian) messages.

ADMINISTRATION.

The Nicaraguan Government have granted a concession to the Tropical Radio Telegraph Co. for the installation and exploitation of wireless stations in the country for public use.

NIGERIA

(See also Map Section)

THIS territory comprises the Colony and Protectorate of Nigeria, which is practically identical with the old Colony of Lagos. The Protectorate is divided into the Northern and Southern Provinces, which almost coincide with the old Protectorates of Northern and Southern Nigeria. It has an area of 332,000 square miles, with a population of 16,250,000.

The Governor and Commander-in-Chief of the Colony is *ex officio* the Governor and Commander-in-Chief of the Protectorate. The Northern and Southern Provinces are each administered by a Lieutenant-Governor. The Colony is administered by the Lieutenant-Governor of the Southern Province.

An Executive Council advises the Governor both for the Colony and Protectorate. The Legislative Council confines its operation to, and considers, the laws and estimates of the Colony. The Nigerian Council is an advisory and deliberate body.

CONTROL AND ORGANISATION.

There is only one wireless station in Nigeria—at Lagos—and this was erected by the African Direct Telegraph Company in 1912. It is open to public service with ships. The Postmaster-General controls the wireless services.

ADMINISTRATION.

Wireless telegraphy is administered under :—

A—The Wireless Telegraph Ordinance, 1916.

B—Regulations made under the Ordinance of 1916.

THE WIRELESS TELEGRAPHY
ORDINANCE, 1916.

A 1. *Short Title.*—This Ordinance may be cited as the Wireless Telegraphy Ordinance, 1916.

2. *Definition.*—Definition: "Wireless Telegraphy" means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent or received.

3. *License for Wireless Telegraphy.*—(1) A person shall not establish any wireless telegraph station or install or work any apparatus for wireless telegraphy in any place or on board any ship registered in Nigeria except under and in accordance with a license granted in that behalf by the Governor.

(2) Every such license shall be in such form and for such period as the Governor may determine, and shall contain the terms, conditions and restrictions on and subject to which it is granted.

4. *Apparatus Aboard Ships to be Worked in Accordance with Regulations.*—A person shall not work any apparatus for wireless telegraphy installed on any merchant ship, whether British or foreign, while that ship is in the territorial waters of Nigeria, otherwise than in accordance with regulations made under this Ordinance.

5. *Regulations.*—(1) The Governor may make regulations for carrying into effect the purposes of this Ordinance.

(2) If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless

telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters of Nigeria shall be subject to such further Regulations as may be made by the Governor and such Regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

6. *Search Warrant.*—If a Magistrate is satisfied by information on oath that there is reasonable ground for suspecting that a wireless telegraph station has been established without a license in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any merchant ship without a license in that behalf, or contrary to the provisions of any Regulations made under this Ordinance or of any license granted under this Ordinance, he may grant a search warrant to any police officer or any person appointed in that behalf by a superior officer and named in the warrant, and a warrant so granted shall authorise the police officer or person named therein to enter and inspect the station, place or ship, and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

7. *Penalties and Procedure.*—Any person who shall offend against any provision of this Ordinance or any of the Regulations made thereunder shall be liable to a fine of fifty pounds, and the Court may order that any apparatus for wireless telegraphy in connection with which the offence was committed shall be seized and forfeited.

8. *Saving Section as Regards Electrical Apparatus.*—Nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than that of wireless telegraphy.

9. Repeal No. 12 of 1913 of *Southern Nigeria and Chapter 55 of the Laws of Northern Nigeria*.—The Wireless Telegraphy Ordinance, 1913, and the Wireless Telegraphy Proclamation are hereby repealed.

REGULATIONS MADE UNDER THE WIRELESS TELEGRAPHY ORDINANCE, 1916.

B The following Regulations are made by His Excellency the Governor-General under and by virtue of the provisions of section 5 of the Wireless Telegraphy Ordinance, 1916:—

1. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of Nigeria shall be worked in such a way as not to interfere with:—

(a) Naval signalling, or

(b) the working of any wireless telegraph station lawfully established, installed or worked in Nigeria or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. In these Regulations "Naval signalling" means signalling by means of any system of

wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and Naval Stations, or between a ship of His Majesty's Navy or a Naval Station and any other wireless telegraph station whether on shore or on any ship.

3. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour or bay or waters of Nigeria except with the special or general permission of the Governor.

4. For the purpose of any proceedings under these Regulations the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

5. Any summons or other document in any proceedings under these Regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

6. These Regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

Made by His Excellency the Governor this 10th day of November, 1916.

NORWAY

(See also Map Section)

THE most westerly of the Scandinavian nations emerged from the obscurities of myth and legend in the ninth century, and after a vigorous separate national existence, was united with Sweden and Denmark under Queen Margaret by the Union of Kalmar in 1397. In 1814 Norway separated from Denmark, and Charles XIII of Sweden established his rule over the two countries. This co-partnership endured until the peaceful revolution of 1905 restored to the Norwegians their complete independence, with Haakon VII as reigning King.

Norway covers an area of 124,964 square miles, with a population of 2,646,306.

CONTROL.

Radiotelegraphy is organised under the supervision of the Telegraph Department; whilst for naval and military purposes the War Office and Admiralty exercise jurisdiction over their own wireless section.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Capt. Niels Stockfleth Schultz Nickelsen Mr. H. Petersen ..	Director-General of Posts and Telegraphs .. Radio Engineer and Chief of Wireless Department Director of Mining Department of the Navy Inspector Wireless Department of the Navy..	Christiania Christiania (Telegraph Department) Horten (Navy Yard) Horten (Navy Yard)

ORGANISATION.

The first wireless stations to be erected and opened for public correspondence were those at Sörvaagen and Röst, both completed in 1906. Radiotelegraphic communication was established in 1911 between Norway and Spitzbergen, and has been maintained ever since.

Some improvements have been made in the existing land stations, the Bergen radio having been equipped with a 5 kW. valve transmitter. The Government intend modernising the Stavanger Transatlantic Station, the transmitter as well as the receiver, but nothing has as yet been decided upon. Two $\frac{1}{4}$ kW. automatic radio beacons are to be erected in the near future, one on the Færder Lighthouse at the entrance of the Kristianiafjord, and the other on the Marstenen Lighthouse on the west coast of Norway, near Bergen.

In the Norwegian Mercantile Marine progress is still being made in the fitting of ship stations, and by the end of this year probably about 550 ships will be fitted with wireless, about two-thirds of this total having the Marconi system installed.

The latest available statistics enumerate :—

Stations for public service to ships	7
Stations for Government traffic only	1
Stations for public service	3
Stations for public service radio telephony	2
Stations for Transatlantic public traffic	1
Stations under construction	3
Installation on Norwegian merchant vessels	about 500

Two Norwegian companies have been formed under the titles of "Norsk Marconi Kompani A/S" at Christiania, and A/S Det Norske Radioselskap. The former company is working in conjunction with Marconi's Wireless Telegraph Co., Ltd., London, and has the sole rights of the Marconi patents for Norway. The latter is working in conjunction with the Telefunken Company.

Meteorological, Storm Warning and Fisheries Services are largely in use, and there are three D.F. stations in operation.

There has recently been formed a wireless club called Norsk Radio Amatør Klub.

ADMINISTRATION.

The Laws and Regulations under which wireless is administered in this country appear in the following pages in accordance with the list appended hereto :—

The general laws and regulations with regard to the control and use of wireless stations are still unchanged, and the question of amateur licenses and experimental working for private individuals is not yet solved. There is, however, reason to believe that everything is being done to facilitate matters, particularly in view of the broadcasting problem which is also arising in this country.

E—Certificate for Wireless Telegraphists.

F—Agreement between Telegraph Administration of Norway, Denmark and Sweden regarding expeditious forwarding of radiotelegrams.

LAW OF JULY, 1914.

A Law of July 24th, 1914, supplementing and amending the Law of April 29th, 1899, relating to the forwarding of communications by aid of telegraphic conductors or such like installations and relating to the repeal of Law No. 2 of July 16th 1907 :—

Section 1.—On ships which sail under the Norwegian flag and which do not belong to the Norwegian Navy, stations or installations for telegraphing or telephoning by wireless both within and without the boundaries of the Kingdom may only be installed and worked

after an authorisation obtained in advance, which will be granted by the King, or whoever may be authorised thereto, on certain definite conditions for a stipulated period of time. The permission may at any time be withdrawn if the conditions imposed are not adhered to.

Detailed Rules and Regulations relating to the fitting up and working of such stations or installations shall be drawn up by the King.

On ships which sail under a foreign flag and are within Norwegian territorial waters wireless telegraphing and telephoning can only be carried on—even if they have permission for same from the authorities of the foreign

country—subject to observance of the provisions which are made with respect thereto by the King or whomsoever he may have authorised for the purpose, who may, moreover, forbid all telegraphing or telephoning from such ships, whenever circumstances may be considered to require it.

Section 2.—The exceptions mentioned in the Law of April 29th, 1899, under Section 1, 2nd paragraph, relating to the working of plant which may be used by a commune or private person for his own use, or such as railways may install for their own working, shall not apply so far as the working of installations for wireless telegraphy or telephony are concerned.

Section 3.—Any infractions of the aforementioned conditions shall be punished pursuant to the provisions laid down in the Law of April 29th, 1899, Section 6.

Moreover, any transgression of the rules or provisions which are drawn up with regard to Section 1 of the present Law shall be punished by fines.

Section 4.—This Law shall come into force immediately. The Law of July 16th, 1907, containing additions and amendments to the Law of April 29th, 1899, relating to the forwarding of communications by means of telegraph lines or similar installations, is hereby repealed.

LAW OF AUGUST, 1914.

B The following paragraph, taken from the "Law of August 18th, 1914," amending the Law of April 29th, 1899, relates directly to Wireless Telegraphy:—

Within the boundaries of Norway, or its territorial waters, stations and installations for wireless telegraphy and telephony may only be erected or worked after permission has been obtained from the King or whomsoever he may authorise thereto, and on such conditions as are laid down in the said permission.

REGULATIONS.

C The following regulations are based on the Law of July 24th, 1901:—

1. Within the limits of Norwegian territorial waters radiotelegraphic or radiotelephonic stations on board foreign ships must not be used without special license, unless it concerns:—

(1) Correspondence regarding ships in distress or in order to prevent accidents.

(2) Correspondence with the nearest Norwegian coast station.

(3) Correspondence with other ship stations provided each of the ships are at least 10 nautical miles from the nearest Norwegian coast station.

In the cases (2) and (3) the correspondence shall at once be suspended if it is required by the Telegraph Department, the Marine Department, or by any one of the radio stations under their authority.

2. In Norwegian ports, where official radio stations are established, and within territories which at any time may be determined by Norwegian authorities, and about which information may be obtained at the nearest official coast station, the ship station must not be used for other correspondence than mentioned in para. 1 (1), unless special permission is obtained.

3. Requests for permission to use the radio stations within the Norwegian territorial waters for other correspondence than mentioned above must be sent to the Telegraph Department, which takes its decision after conference with the Marine Department.

4. However, the preceding provisions do not, with the following exceptions, apply to stations on board foreign ships of war. Provided the

ships enter Norwegian ports, where official radio stations are established (see the list published by the Telegraph Department), and wish to make use of the radio apparatus on board, they shall first apply to the manager of the official radio station at the place, which will inform at what times it is permitted to use the apparatus.

At this application, which can take place by radio, the wavelength which one wishes to use shall be stated.

In Norwegian ports and territorial waters such vessels may otherwise freely use their radio stations. The correspondence must, however, at once be suspended, when it is required by the Telegraph Department, the Marine Department, or by any one of the stations under their authority.

5. Whenever the radio station is used during the stay of the ship in Norwegian waters, this shall be done subject to the regulations contained in the International Telegraph Convention, with the rules pertaining thereto.

6. The above-mentioned regulations are only applicable when Norway is not at war, and only to the ships of non-belligerent foreign forces.

7. The preceding regulations come into force from September 1st, 1922. From the same date the previous regulations approved by the Royal Decree of October 24th, 1908, are repealed.

NORWEGIAN LICENSE CONDITIONS.

D Conditions for erection and working of Radiotelegraph and Radiotelephone stations on board ships (ship stations).

FORM OF LICENSE.

According to the Law of 24th July, 1914, and the Royal Decree of the 30th August, 1913, permission is hereby given to.....

..... to erect and work on board the ship..... a Radiotelegraph Station (Radiotelephone Station) on accordance with the Table of Particulars on the last page of this form. The permission is valid from..... to..... and is given on the following conditions.

1. The station shall belong to the..... class of stations as specified in the International Radiotelegraph Convention Service Regulations, Art. XIII b, and will thus have..... service.

2. The installation shall be effected in every respect in accordance with the installation plan approved by the Telegraph Department, and must not be departed from without the agreement of the said department. Ships belonging to the 1st and 2nd classes must be provided with emergency Radiotelegraph installations, as laid down in the existing Radiotelegraphic Service Regulations.

3. The holder of the license shall, as far as the erection and working of the station is concerned, be under the obligation in every respect to adhere to existing international agreements with annexed regulations concerning Radiotelegraphy and Telephony when such International agreements have been adhered to by Norway, and further he shall abide by such regulations as may be issued by the Department for Public Works or by the Telegraph Department.

4. The Telegraph Department shall have the right, in the interests of the service and (after conferring with the Naval Department) to require any alterations to be made in the wavelengths employed as given in the above-mentioned Table of Particulars within the limits laid down in the regulations either as a temporary or permanent measure in the working of the station.

5. The holder of the license shall recognise the importance of keeping the station in the best possible condition in order to ensure good working.

6. The station shall be under the obligation to forward telegrams to and from persons on board, with due regard to existing general rules for such work. Further, the station shall be obliged to communicate with other ship or coast stations without regard to the system of apparatus employed at those stations.

7. The answering of signals from ships in distress and the correspondence caused thereby shall have priority over all other correspondence.

8. During the ship's stay in a Norwegian Port the station must not be used for communication either with Norwegian or with Foreign coast stations. Neither shall the station, while the ship is in a Norwegian port, be used for communication with other ship stations without special permission, or unless such communication is effected with a view to prevent accidents. Special permission is granted by the Telegraph Department after conferring with the Naval Department.

9. The call signal of the station is.....

10. The tax due to the ship station is.....
.....(ore) centimes) per
word with a minimum of(ore)
(..... centimes) per message.

11. The service on board must be performed by one telegraphist, or, for ship stations of class I, by two or more telegraphists holding a certificate issued by the Telegraph Department.

This certificate states that the telegraphist concerned possesses the knowledge and abilities as prescribed in the existing International Regulations.

The granting of such certificate depends upon the passing of an examination arranged by the Telegraph Department. Petty Officers and Seamen belonging to the Navy's staff of mechanics, and who are specially trained as Radiotelegraphists for the Navy, are entitled to such certificate when they can prove to the Telegraph Department that they have the necessary knowledge of the handling of telegrams and when they procure from the authority concerned in the Navy, a testimonial to the effect that they satisfy the International Regulations as far as their knowledge of the instruments, ability, etc., is concerned. Without the permission of the Telegraph Department other than Norwegian subjects must not be employed for the service on board.

The holder of the license will take the best possible care that the contents of messages do not come to the knowledge of unauthorised persons.

The telegraphist will make the usual promise of secrecy.

12. The holder of the license is responsible for the charges that are due for the transmission of the messages sent from the ship station, including the charge for the coast station.

The Telegraph Administration, on its side, pays to the holder of the license the charges that are due to the ship station for the messages addressed to the ship. "Journals" (abstract) should be kept in respect of the correspondence (traffic). These "Journals," together with the originals of the transmitted messages and such other documents as may be required, are to be sent to the Telegraph Department, as far as possible, at the end of each month.

The mutual settlement of the charges will take place quarterly or monthly, as may be

arranged between the Telegraph Department and the holder of the license. However, with the agreement of the Telegraph Department the holder of the license may make other arrangements for the accounting of stations on ships that are exclusively engaged in foreign waters. Such arrangements may be made with the Administrations to which the coast stations that the ships usually make use of belong. Similarly, the Telegraph Department may make arrangements other than those mentioned above with Foreign Administrations.

13. The station is subject to such supervision as may be decided by the Department for Public Works, and one or more of the Officials appointed by the Department for Public Works or by the Telegraph Department should be given opportunity to inspect the station.

For the supervision of the station the holder of the licence has to pay a certain fee that will be decided by the Department.

14. When State or other public reasons so demand it, the Department for Public Works or the Naval Department may partly or entirely prohibit the transmission of any kind of traffic correspondence at the station without admitting any claim for compensation. Likewise, in the interests of the service, the Telegraph or Naval Department can prohibit with the same effect all correspondence from the station, either at certain places or at certain times of the day.

15. The Norwegian State has the right to take over the station with six months' notice against compensation, the amount of which will be fixed after valuation, should it not be possible to arrive at an amicable adjustment.

The valuation will be made by a Committee of three members, whereof one member is nominated by the owner, one by the Telegraph Department and one by the Department for Public Works.

The member nominated by the Department for Public Works will be the Chairman of the Committee.

The questions put before the Committee will be decided solely by majority of votes.

In case the owner has not, within thirty days after the reception of the invitation, made any such nomination as mentioned above, or in case the member nominated by him fails to attend, the valuation will then with obligatory effect be decided by the other nominees.

In case of equal voting the vote of the Chairman shall decide the matter.

In the valuation regard shall only be paid to the technical value of the station at the moment of valuation, the income, etc., derived from the station not being taken into account.

The valuation shall take place within a time-limit fixed by the Telegraph Department and will be at the public expense.

16. The license shall become null and void in case:—

(a) Use is not made of it within a year of its issue.

(b) Breach is made of any of its regulations.

(c) The ship ceases to fly the Norwegian flag.

17. Disputes as to the intent and meaning of this licence shall, with obligatory effect, be decided by the King.

The Telegraph Department,
Christiania.....19

AGREEMENT

REGARDING CERTAIN EXCEPTIONS TO THE PROVISIONS OF ARTICLE XXXV OF THE SERVICE REGULATIONS ANNEXED TO THE INTERNATIONAL RADIOTELEGRAPH CONVENTION.

F With a view to securing a more expeditious forwarding of radiotelegrams from a ship to its homeland, the following Agreement has been concluded between the Royal Norwegian, the Royal Danish, and the Royal Swedish Telegraph Administrations, subject to the necessary sanctions:—

Notwithstanding what is stipulated in Article XXXV para. 1 of the service regulations annexed to the International Radiotelegraph

Convention, according to which a ship station shall as a rule send its radiotelegrams to the nearest coast station, radiotelegraph stations on board ship flying the Norwegian, Danish or Swedish flag are entitled to send to the nearest coast station of the ship's homeland such radiotelegrams as are addressed to that country subject to the following conditions:—

1. That the ship is at least 25 nautical miles from any other coast station open for general correspondence.

2. That the ship's distance from the coast station concerned is not greater than the distance from any other coast station situated in a country other than Norway, Denmark or Sweden and open for general correspondence.

3. That transmissions cease immediately at the request of a nearer coast station whose correspondence is being disturbed by such transmissions, and

4. That the provisions of the International Radiotelegraph Convention and the annexed Service Regulations be maintained in other respects.

This Agreement which is executed in three copies and in each of three countries' languages comes into force on the 1st January, 1921, and shall remain in force indefinitely and until three months from the day on which it shall have been determined by one of the contracting parties.

Christiania, the..... December, 1920.

NYASALAND PROTECTORATE

(See also Map Section)

THIS Colony was constituted on May 14th, 1891, as the "British Central Africa" Protectorate, and so remained until 1907, when it assumed its present appellation. Its area covers 39,573 square miles, with a population of 1,201,519.

It is administered (under the Colonial Office) by the Governor and Commander-in-Chief, assisted by an Executive and a Legislative Council.

ADMINISTRATION.

Wireless Telegraphy is not at present in operation, although provision has been made in the Statute Book for its regulation if ever it be introduced, as follows —

WIRELESS ORDINANCE, 1908.

1. This Ordinance may be cited as "The Wireless Telegraphy Ordinance, 1908."

2. No person shall establish or use any apparatus or installation for the purpose of operating wireless telegraphs without a license from the Governor.

Any person contravening this section shall be liable on conviction to a fine not exceeding £100 or to imprisonment with or without hard labour for a term not exceeding twelve months with or without the option of a fine, and in addition any apparatus or installations in respect of which an offence under this section is

committed may be forfeited and sold or disposed of as the Governor may direct.

3. The Governor in Council may from time to time make, and when made shall publish in the *Gazette*, rules prescribing the terms and conditions upon which licenses to establish or use apparatus or installations for the purpose of operating wireless telegraphs may be granted, and may impose a penalty on conviction for breach of any rules so made of a fine not exceeding £50 or imprisonment with or without hard labour for a term not exceeding six months with or without the option of a fine, and such Rules may further provide for forfeiture and sale or disposal as the Governor may direct of any such apparatus or installations as aforesaid

PACIFIC ISLANDS

(See also Map Section)

Including :

BRITISH—Tonga (Friendly Islands), Ducie Islands, Gilbert and Ellice Islands Colony, British Solomon Islands, Starbuck Islands, Malden Island, Baker Islands, Palmyra.

JAPANESE—The Marianne (Ladrone) Islands, The Caroline Islands, Marshall Islands.

TONGA ISLANDS

(Friendly Islands)

THIS group remained, until 1899, a neutral territory in accordance with the Declaration of Berlin, April 6th, 1886. Under the terms of the Anglo-German Agreement (November 14th, 1899), subsequently accepted by the United States, the Tonga Islands fell practically under the protectorate of Great Britain, which was proclaimed on May 19th, 1900. The present Sovereign is Queen Salote, who is assisted by a Legislative Assembly.

The area of these islands is 385 square miles with a population of 23,562.

CONTROL.

A department of Telegraphs and Telephones was inaugurated at the time of the erection of the wireless station, under whose jurisdiction fall all matters concerning radiotelegraphy and telephony.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. J. R. Land	Officer in Charge of Telegraphs and Telephones ..	Nukualofa
—	Assistant Wireless Officer	Nukualofa

The station of Nukualofa is owned and controlled by the Tongan Government and handles commercial traffic.

ORGANISATION.

Nukualofa Radio (the only station yet erected in the Friendly Islands) was opened for commercial traffic on December 30th, 1919. The station works with Suva (Fiji), Apia (Samoa) and ships. It was equipped by the Amalgamated Wireless (Australasia), Ltd.

Telegrams are delivered between the hours of 9 a.m. and 4 p.m. No portorage charge is imposed on delivered telegrams. These are delivered within a one-mile radius of the wireless station. Telegrams for persons residing outside the mile radius are either posted to the addressee or delivered to an authorised agent residing within the mile radius.

No form of license is issued, there being at present no amateurs or experimenters in the Kingdom.

There are no time, press, aviation or direction finding services.

No regular system of broadcasting meteorological reports is in vogue, but when conditions demand it, weather reports are sent out for the information of all stations. All meteorological telegrams are handled free of charge.

ADMINISTRATION.

As regards the European population, Tonga comes under King's Regulation No. IX of 1912. (*See* Gilbert and Ellice Colony.) The use of wireless stations on merchant ships is controlled by the "Wireless Telegraphy Rules, 1917," made under the above-mentioned King's Regulation. An Ordinance is in effect regulating the use of wireless by Tongan natives.

A—An Ordinance to govern the use of wireless telegraphy in the Kingdom of Tonga. (No. 5 of 1918.)

AN ORDINANCE

TO GOVERN THE USE OF WIRELESS TELEGRAPHY IN THE KINGDOM OF TONGA. (No. 5 of 1918.)

A Be it enacted by the King by the advice and with the consent of the Privy Council as follows :—

1. The short title of this Ordinance shall be The Wireless Telegraphy Ordinance, 1918.

2. It shall not be lawful for any Tongan to establish maintain or use in the Kingdom of Tonga any apparatus or instrument for the purpose of electrical communication by means of wireless telegraphy without having previously obtained from the Privy Council a license in that behalf to be granted on such terms and conditions as may be prescribed by any rules made under this Ordinance and on such other terms and conditions as the Privy Council may from time to time think fit to prescribe.

3. It shall be lawful for His Majesty the King in Council from time to time to make rules :—

(a) Prescribing the manner in which licenses under this Ordinance are to be

applied for and granted and the fees payable on the grant of such license.

(b) Generally for the purpose of carrying this Ordinance into effect.

4. Any person who contravenes the provisions of this Ordinance or of any rules made hereunder or fails to observe or perform the terms or conditions of a license granted hereunder or prescribed by any rules aforesaid shall be liable on conviction to a fine not exceeding fifty pounds or in default of payment to imprisonment for any term not exceeding six months and the apparatus or instrument in respect of which such conviction was obtained may by order of the magistrate before whom such conviction was obtained be forfeited.

5. All proceedings under this Ordinance may be taken before a Police Magistrate and the mode of procedure shall be according to the law in force for the time being in respect of other offences punishable on conviction before a Police Magistrate.

March 5th, 1918.

DUCIE, PITCAIRN, PHOENIX ISLANDS GROUP

UNDER the control of the High Commissioner for the Western Pacific, the affairs of these islands are conducted by local councils. They are of small dimensions and thinly inhabited.

CONTROL AND ORGANISATION.

As far as we are aware wireless has no part in the affairs of these islands.

GILBERT AND ELLICE ISLANDS COLONY

THE Gilbert Islands were declared a British Protectorate on the 27th May, 1892, followed by the Ellice Islands in September of the same year, and named the "Gilbert and Ellice Islands Protectorate." The jurisdiction of the Resident Commissioner of the Protectorate was extended to the Ocean Island on the 28th November, 1900.

By the "Gilbert and Ellice Order in Council, 1915," the aforesaid Islands, together with all small islands, islets, rocks and reefs, depending on them, shall be annexed to and form part of His Majesty's Dominions, and shall be known as the "Gilbert and Ellice Islands Colony." The Administration of the Group is vested in a Resident Commissioner, who is responsible to The High Commissioner for the Western Pacific, with headquarters on Ocean Island.

The group comprises 31 islands, with a number of islets depending upon them, and lies between latitude 4° N. and 10° S.; its longitude being 169° E. to 158° W. The total area approximates to 200 square miles with a population of about 32,000.

CONTROL AND ORGANISATION.

Radiotelegraphy is a Government monopoly, though licenses may be granted for private erection and working. There are three wireless stations in the group, viz.: Ocean Island, Fanning, and Washington Islands. The two latter stations, which are privately owned by the Fanning and Washington Islands Trading Company, and licensed by this Colony, are not at present in operation.

Ocean Island is the only Government land station, being operated and controlled by the Government of the Colony. It comprises a Marconi standard 5 kW. set and modern amplifying valve receivers.

Both day and night communication was established with Suva, Fiji, in January, 1920, and an efficient service has been maintained since. In addition this station works with Tulagi and Nauru. 1,650 metre wave is used with all land stations, and 600 metres for ship working.

The times of working are as follows:—

Tulagi—Once daily, 9.15 a.m. until clear.

Nauru—9.45 a.m., 3.45 p.m. and 7.45 p.m. until clear.

Suva, Fiji—10.30 a.m. and 8 p.m. until clear.

Ships—9.30 a.m., 3.30 p.m. and 7.30 p.m.

Time—Standard of meridian 170° East.

There are no existing or projected stations designed for aviation or meteorological purposes and no time or weather programme is in force at any of the existing stations.

Mr. G. L. G. Tilford	Officer in Charge	Ocean Island

ADMINISTRATION.

The following are the rules and regulations at present in force:—

A—King's Regulation No. IX of 1912.

B—Rules under the provisions thereof.

KING'S REGULATION No. IX OF 1912.

TO GOVERN THE USE OF WIRELESS TELEGRAPHY IN THE WESTERN PACIFIC.

A 1. This Regulation may be cited as "The Wireless Telegraphy Regulation, 1912."

2. The Wireless Telegraphy Regulation, 1907, is hereby repealed.

3. (1) It shall not be lawful for any person to establish, install or use any apparatus for the purpose of electrical communication by means of wireless telegraphy in any protectorates, islands, or places within the jurisdiction of the High Commissioner for the Western Pacific specified in the schedule hereto without a license to do so first obtained from the said High Commissioner.

(2) A license under this section shall be subject to such terms and conditions as may be prescribed by any rules made under this regulation and to such other terms and conditions as the High Commissioner may from time to time prescribe.

4. The High Commissioner may make rules from time to time to carry out the provisions of this regulation and in particular to regulate the use of apparatus for wireless telegraphy on board merchant ships, whether British or foreign vessels, while in the territorial waters of the protectorates or islands or places aforesaid.

5. Any person who contravenes the provisions of this Regulation or of any rules made hereunder, or fails to observe and perform the terms and conditions of a license granted

by the High Commissioner hereunder or prescribed by any rules aforesaid, shall be liable to a penalty not exceeding one hundred pounds and to the forfeiture of any apparatus established, installed or used for the purpose aforesaid.

6. This Regulation shall not apply to the islands of the Pacific Ocean known as the New Hebrides, including the Banks Islands and Torres Islands.

SCHEDULE.

The British Solomon Islands Protectorate, The Gilbert and Ellice Islands Protectorate, The Union (Tokelau) Islands, The Phoenix Islands, Fanning Island, Washington Island, Christmas Island and all other islands in the Western Pacific not being within the jurisdiction of the Commonwealth of Australia or any of the states thereof or of the Dominion of New Zealand or of any civilised Power.

B RULES TO REGULATE THE USE OF WIRELESS TELEGRAPH APPARATUS ON MERCHANT SHIPS IN THE WESTERN PACIFIC, MADE BY THE HIGH COMMISSIONER UNDER THE PROVISIONS OF THE WIRELESS TELEGRAPHY REGULATION, 1912.

1. These rules may be cited as the Wireless Telegraphy Rules, 1917.

2. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the protectorates, islands and places specified in the Schedule to the Wireless Telegraphy Regulation, 1912, shall be worked in such a way as not to interfere with—

- (a) Naval signalling; and
 (b) The working of any wireless telegraph station, lawfully established, installed or worked in those protectorates, islands or places or the territorial waters thereof;

and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

3. (a) The apparatus for wireless telegraphy on board a merchant ship shall not be worked whilst such ship is within a harbour in any colony, protectorate or island specified in the Schedule to the Wireless Telegraphy Regulation, 1912.

(b) For the proper enforcement of the above every ship of British register in any such harbour shall completely disconnect its aerial wires from its radio apparatus, the ends of such wires being suspended entirely clear of the radiotelegraph cabin, preferably from the main rigging, in such a manner as to show they are properly disconnected.

(c) Every ship of foreign register in any such harbour shall, subject to the provisions of the following subsection (d) take down its aerial wires completely and disconnect the same from its radiotelegraph apparatus.

(d) A ship of foreign register remaining in any such harbour for less than twelve hours, may, at the discretion of the Resident Commissioner or other Government officer in charge of the colony, protectorate or island to which such harbour belongs, be permitted to leave its aerials up, provided the same are disconnected in accordance with the provisions of subsection (b) of this rule.

4. If at any time, in the opinion of the High Commissioner, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters aforesaid shall be subject to such further rules as may be made by the High Commissioner from time to time, and those rules may prohibit or regulate that use in all cases or in such cases as may be deemed desirable.

5. It shall be the duty of the master of a ship to see that the requirements of these rules are carried out.

6. These rules shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

7. The rules made on December 16th, 1912, are hereby repealed.

Dated this twenty-ninth day of August 1917.

BRITISH SOLOMAN ISLANDS

THIS group comprises an area of 11,000 square miles with a population of 150,750, and is under British protection.

CONTROL AND ORGANISATION.

Up to the time of going to press we have been unable to obtain any information relating to wireless in this group. For the remainder of the Solomon Islands see under New Guinea.

STARBUCK, MALDEN, JARVIS, PALMYRA AND BAKER ISLANDS

THESE islands are mostly of coral formation; they have a small area, and are very thinly populated.

CONTROL AND ORGANISATION.

As far as we are aware wireless has no part in the affairs of these islands.

MARIANNE, (LADRONE), CAROLINE, MARSHALL ISLANDS

BY the Treaty of Versailles Japan obtained mandatory of the former German possessions north of the equator, their population being largely Japanese.

CONTROL AND ORGANISATION.

Up to the time of going to press we have been unable to obtain any information relating to wireless in these islands.

PALESTINE

(See also Map Section)

AFTER its conquest in 1917-18 by the British forces, the country remained until July 1st, 1920, under British Military Administration, when a High Commissioner was appointed, and a Civil Administration set up.

The boundaries (political) are not yet entirely delimited, but are approximately shown in the map.

The area is about 9,000 square miles, and the population approximately 770,000.

CONTROL AND ORGANISATION.

There are no Government or commercial wireless stations in the country. Wireless traffic is transmitted via Egypt, the charges being similar to those in force in Lower Egypt, with the addition of a terminal charge at the usual international rates.

PANAMA

(See also Map Section)

Including : Panama Republic, Panama Canal Zone.

PANAMA, formerly a department of the Republic of Colombia, asserted its independence on November 3rd, 1903. It has an area of 32,380 square miles and a population (excluding the Canal Zone) of 401,428.

The idea of a Canal through the Isthmus of Panama originated with a Spanish engineer in 1530. Monsieur de Lesseps laboured on its construction from 1882 to 1894, when the United States Government took over the undertaking, and by a treaty between the United States and Panama of November 18th, 1903, the latter granted to the United States in perpetuity a strip of land 10 miles in width, extending across the Isthmus a distance of 50 miles. The rights of sovereignty are vested in the U.S.A. under a Treaty signed on February 26th, 1904.

The zone is ruled by a Governor, who reports through the Secretary of War to the President and conducts the government according to the authority invested in him by Acts of Congress and Executive orders. In periods of crisis or times of war the supreme command is vested in the Commanding Officer of the Troops, designated as the Panama Canal Department of the U.S.A. Army. The American Canal was opened for traffic on August 15th, 1914.

CONTROL.

Radiotelegraphy in the zone is administered by the Navy Department of the United States. All wireless stations on the Isthmus are under control of the Commandant, 15th Naval District, Balboa Heights, Canal Zone, and under the immediate supervision of the Communication Superintendent, 15th Naval District.

Under agreement between the Republic of Panama and the United States of America Radiotelegraphic Communication within the Republic, as well as in the Canal Zone, remains under the control of the U.S.A. This arrangement rests on Decree No. 130 of August 29th, 1914, signed by the President of the Panama Republic.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
Capt. L. R. Sargent, U.S.N.	Marine Superintendent Panama Canal and Commandant 15th U.S. Naval District	Balboa Heights
Lt.-Com. F. L. Riefkohl ..	Communication Superintendent 15th U.S. Naval District	Balboa Radio Station Fort Amador

ORGANISATION.

The first radio station erected was situated in the Republic of Panama within the municipal limits of the City of Colon, in 1906, and the reservation there established is still the site of a successor to this pioneer station.

The small station established at Porto Bello, Panama, in 1909, was closed on May 13th, 1914. The Colon station, established on March 1st, 1910, was re-equipped with improved apparatus, and opened to commercial traffic in January, 1913. At Balboa (Pacific end of the Canal) there stands a station opened for commercial business in June, 1913, and replaced by an improved installation on the same site in 1914. The well-known "Darien" station

(located alongside the Canal, midway between the oceans) is a high-power installation, designed primarily for communication with Washington and for naval vessels at sea. It possesses a sending radius of 3,000 miles, and was placed in regular service on April 5th, 1915.

The Almirante Radio station belonging to the United Fruit Co., was established in 1921, superseding the Bocas del Toro station.

There is a Naval Radio Station for communication with aircraft at the Naval Air Station, Coco Solo, C.Z. It is contemplated to install a radio telephone transmitter at that station some time in the near future, which will be available for use in handling commercial traffic. No definite information is available as to the time when this set will be installed.

There have been some developments not shown above, but no information concerning them has yet been disclosed.

There are no wireless clubs or radio societies, the whole of the wireless operations being controlled and administered by the U.S. Navy.

An unofficial news service for the benefit of persons at sea is carried on by the Colon station, which each day at 3.30 p.m. radiates broadcast about 200 words of news made up of extracts from the Panama morning papers, whilst Press despatches obtained by radio from the United States are re-broadcasted at 5 a.m. by Balboa (NBA) on 7,000 metres (arc) and 2,400 metres spark.

ADMINISTRATION.

We publish below the text of the various Acts and Decrees affecting radiotelegraphy in the Canal Zone and the following is the text of a circular relating to radio practice:—

The following is a copy of Circular No. 626-10, issued by the Executive Office, The Panama Canal, February 17th, 1922:—

"Hereafter ships with clean bills of Health, from non-infected ports, and without sickness on board, intending to transit the canal without taking supplies or stores of any kind or landing passengers or cargo, may be granted practice by radio under the following conditions:—

(a) By making application therefor by radio between the hours of 8 a.m. and 4 p.m. Such application to state—

(1) That the vessel has a clean bill of health and has no sickness on board.

(2) Names of ports and places visited within the past ten days.

(3) That the vessel intends to transit the canal without taking stores of any kind or landing passengers or cargo.

(b) Radio will be addressed to Chief Quarantine Office, through port captain.

(c) Practice will not be considered as granted until reply has been received from port captain, 'Chief quarantine officer grants practice.'

A—Act to regulate Radio Communication issued August 13th, 1912.

B—Section 6 of Act to Provide for Opening, Maintenance, Protection and Operation of the Panama Canal (dated August 24th, 1912).

C—Extracts from Rules and Regulations for the Operation and Navigation of the Panama Canal, dated August 15th, 1919.

D—Notice concerning Commercial Service at Naval Stations, dated September 1st, 1913.

E—Circular *re* Compulsory Wireless, dated July 23rd, 1914.

F—Circular *re* Free Radio Service, dated November 17th, 1914.

AN ACT TO REGULATE RADIO COMMUNICATION.

A Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That a person, company, or corporation within the jurisdiction of the United States shall not use or operate any apparatus for radio communication as a means of commercial intercourse among the several States, or with foreign nations, or upon any vessel of the United States engaged in interstate or foreign commerce, or for the transmission of radiograms or signals the effect of which extends beyond the jurisdiction of the State or Territory in which the same are made, or where interference would be caused thereby with the receipt of messages or signals from

beyond the jurisdiction of the said State or Territory, except under and in accordance with a license, revocable for cause, in that behalf granted by the Secretary of Commerce and Labour upon application therefor; but nothing in this Act shall be construed to apply to the transmission and exchange of radiograms or signals between points situated in the same State: Provided, that the effect thereof shall not extend beyond the jurisdiction of the said State or interfere with the reception of radiograms or signals from beyond said jurisdiction; and a license shall not be required for the transmission or exchange of radiograms or signals by or on behalf of the Government of the United States, but every Government station on land or sea shall have special call letters designated and published

in the list of radio stations of the United States by the Department of Commerce and Labour. Any person, company, or corporation that shall use or operate any apparatus for radio communication in violation of this section, or knowingly aid or abet another person, company, or corporation in so doing, shall be deemed guilty of a misdemeanour, and on conviction thereof shall be punished by a fine not exceeding five hundred dollars, and the apparatus or device so unlawfully used and operated may be adjudged forfeited to the United States.

SEC. 2.—That every such license shall be in such form as the Secretary of Commerce and Labour shall determine and shall contain the restrictions, pursuant to this Act, on and subject to which the license is granted; that every such license shall be issued only to citizens of the United States or Porto Rico or to a company incorporated under the laws of some State or Territory or of the United States or Porto Rico, and shall specify the ownership and location of the station in which said apparatus shall be used and other particulars for its identification and to enable its range to be estimated; shall state the purpose of the station, and, in case of a station in actual operation at the date of passage of this Act, shall contain the statement that satisfactory proof has been furnished that it was actually operating on the above-mentioned date; shall state the wavelength or the wavelengths authorised for use by the station for the prevention of interference and the hours for which the station is licensed for work; and shall not be construed to authorise the use of any apparatus for radio communication in any other station than that specified. Every such license shall be subject to the regulations contained herein, and such regulations as may be established from time to time by authority of this Act or subsequent Acts and treaties of the United States. Every such licence shall provide that the President of the United States in time of war or public peril or disaster may cause the closing of any station for radio communication and the removal therefrom of all radio apparatus, or may authorise the use or control of any such station or apparatus by any department of the Government, upon just compensation to the owners.

SEC. 3.—That every such apparatus shall at all times while in use and operation as aforesaid be in charge or under the supervision of a person or persons licensed for that purpose by the Secretary of Commerce and Labour. Every person so licensed who in the operation of any radio apparatus shall fail to observe and obey regulations contained in or made pursuant to this Act or subsequent Acts or treaties of the United States, or any one of them, or who shall fail to enforce obedience thereto by an unlicensed person while serving under his supervision, in addition to the punishments and penalties herein prescribed, may suffer the suspension of the said license for a period to be fixed by the Secretary of Commerce and Labour not exceeding one year. It shall be unlawful to employ any unlicensed person or for any unlicensed person to serve in charge or in supervision of the use and operation of such apparatus, and any person violating this provision shall be guilty of a misdemeanour, and on conviction thereof shall be punished by a fine of not more than one hundred dollars or imprisonment for not more than two months, or both, in the discretion of the court, for each and every such offence: Provided,

that in case of emergency the Secretary of Commerce and Labour may authorise a collector of customs to issue a temporary permit, in lieu of a license, to the operator on a vessel subject to the radio ship Act of June twenty-fourth, nineteen hundred and ten.

SEC. 4.—That for the purpose of preventing or minimising interference with communication between stations in which such apparatus is operated, to facilitate radio communication, and to further the prompt receipt of distress signals, said private and commercial stations shall be subject to the regulations of this section. These regulations shall be enforced by the Secretary of Commerce and Labour through the collectors of customs and other officers of the Government as other regulations herein provided for.

The Secretary of Commerce and Labour may, in his discretion, waive the provisions of any or all of these regulations when no interference of the character above mentioned can ensue.

The Secretary of Commerce and Labour may grant special temporary licenses to stations actually engaged in conducting experiments for the development of the science of radio communication, or the apparatus pertaining thereto, to carry on special tests, using any amount of power or any wavelengths, at such hours and under such conditions as will insure the least interference with the sending or receipt of commercial or Government radiograms, of distress signals and radiograms, or with the work of other stations.

In these regulations the naval and military stations shall be understood to be stations on land.

REGULATIONS.

1. *Normal Wavelength.*—Every station shall be required to designate a certain definite wavelength as the normal sending and receiving wavelength of the station. This wavelength shall not exceed 600 metres or it shall exceed 1,600 metres. Every coastal station open to general public service shall at all times be ready to receive messages of such wavelengths as are required by the Berlin Convention. Every ship station, except as hereinafter provided, and every coast station open to general public service shall be prepared to use two sending wavelengths, one of 300 metres and one of 600 metres, as required by the international convention in force: Provided, that the Secretary of Commerce and Labour may, in his discretion, change the limit of wavelength reservation made by Regulations 1 and 2 to accord with any international agreement to which the United States is a party.

2. *Other Wavelengths.*—In addition to the normal sending wavelength all stations, except as provided hereinafter in these regulations, may use other sending wavelengths: Provided, that they do not exceed 600 metres or that they do exceed 1,600 metres: Provided further, that the character of the waves emitted conforms to the requirements of Regulations 3 and 4 following.

3. *Use of a "Pure Wave."*—At all stations if the sending apparatus, to be referred to hereinafter as the "transmitter," is of such a character that the energy is radiated in two or more wavelengths, more or less sharply defined, as indicated by a sensitive wavemeter, the energy in no one of the lesser waves shall exceed 10 per cent. of that in the greatest.

4. *Use of a "Sharp Wave."*—At all stations the logarithmic decrement per complete oscillation in the wave trains emitted by the transmitter shall not exceed two-tenths, except when sending distress signals or signals and messages relating thereto.

5. *Use of "Standard Distress Wave."*—Every station on shipboard shall be prepared to send distress calls on the normal wavelength designated by the international convention in force except on vessels of small tonnage unable to have plants insuring that wavelength.

6. *Signal of Distress.*—The distress call used shall be the international signal of distress:—
• • • • •

7. *Use of "Broad Interfering Wave" for Distress Signals.*—When sending distress signals, the transmitter of a station on shipboard may be tuned in such a manner as to create a maximum of interference with a maximum of radiation.

8. *Distance Requirement for Distress Signals*—Every station on shipboard, wherever practicable, shall be prepared to send distress signals of the character specified in Regulations 5 and 6 with sufficient power to enable them to be received by day over sea a distance of 100 nautical miles by a shipboard station equipped with apparatus for both sending and receiving equal in all essential particulars to that of the station first mentioned.

9. *"Right of Way" for Distress Signals.*—All stations are required to give absolute priority to signals and radiograms relating to ships in distress; to cease all sending on hearing a distress signal; and, except when engaged in answering or aiding the ship in distress, to refrain from sending until all signals and radiograms relating thereto are completed.

10. *Reduced Power for Ships near a Government Station.*—No station on shipboard, when within fifteen nautical miles of a naval or military station, shall use a transformer input exceeding one kilowatt, nor, when within five nautical miles of such a station, a transformer input exceeding one-half kilowatt, except for sending signals of distress or signals or radiograms relating thereto.

11. *Intercommunication.*—Each shore station open to general public service between the coast and vessels at sea shall be bound to exchange radiograms with any similar shore station and with any ship station without distinction of the radio systems adopted by such stations, respectively, and each station on shipboard shall be bound to exchange radiograms with any other station on shipboard without distinction of the radio systems adopted by each station, respectively.

It shall be the duty of each such shore station during the hours it is in operation, to listen in at intervals of not less than fifteen minutes and for a period of not less than two minutes, with the receiver tuned to receive messages of 300 metre wavelengths.

12. *Division of Time.*—At important seaports and at all other places where naval or military and private or commercial shore stations operate in such close proximity that interference with the work of naval and military stations cannot be avoided by the enforcement of the regulations contained in the foregoing regulations concerning wavelengths and the character of signals emitted, such private or commercial shore stations as do interfere with the reception of signals by the naval and military stations concerned

shall not use their transmitters during the first fifteen minutes of each hour, local standard time. The Secretary of Commerce and Labour may, on the recommendation of the Department concerned, designate the station or stations which may be required to observe this division of time.

13. *Government Stations to Observe Division of Time.*—The naval or military stations for which the above-mentioned division of time may be established shall transmit signals or radiograms only during the first fifteen minutes of each hour, local standard time, except in case of signals or radiograms relating to vessels in distress, as hereinbefore provided.

14. *Use of Unnecessary Power.*—In all circumstances, except in case of signals or radiograms relating to vessels in distress, all stations shall use the minimum amount of energy necessary to carry out any communication desired.

15. *General Restrictions on Private Stations.*—No private or commercial station not engaged in the transaction of *bona fide* commercial business by radio communication or in experimentation in connection with the development and manufacture of radio apparatus for commercial purposes shall use a transmitting wavelength exceeding 200 metres, or a transformer input exceeding one kilowatt, except by special authority of the Secretary of Commerce and Labour contained in the licence of the station: *Provided*, That the owner or operator of a station of the character mentioned in this regulation shall not be liable for a violation of the requirements of the third or fourth regulations to the penalties of \$100 or \$25, respectively provided in this section unless the person maintaining or operating such station shall have been notified in writing that the said transmitter has been found, upon tests conducted by the Government, to be so adjusted as to violate the said third and fourth regulations, and opportunity has been given to said owner or operator to adjust said transmitter in conformity with said regulations.

16. *Special Restrictions in the Vicinities of Government Stations.*—No station of the character mentioned in regulation 15 situated within five nautical miles of a naval or military station shall use a transmitting wavelength exceeding 200 metres or a transformer input exceeding one-half kilowatt.

17. *Ship Stations to Communicate with Nearest Shore Station.*—In general, the shipboard stations shall transmit their radiograms to the nearest shore station. A sender on board a vessel shall, however, have the right to designate the shore station through which he desires to have his radiograms transmitted. If this cannot be done, the wishes of the sender are to be complied with only if the transmission can be effected without interfering with the service of other stations.

18. *Limitations for Future Installations in Vicinities of Government Stations.*—No station on shore not in actual operation at the date of the passage of this Act shall be licensed for the transaction of commercial business by radio communication within fifteen nautical miles of the following naval or military stations—to wit: Arlington, Virginia; Key West, Florida; San Juan, Porto Rico; North Head and Tatoosh Island, Washington; San Diego, California; and those established or which may be established in Alaska and in the Canal Zone; and the head of the department having control of such Government stations shall, so far as is consistent with the transaction of

governmental business, arrange for the transmission and receipt of commercial radiograms under the provisions of the Berlin convention of 1906 and future international conventions or treaties to which the United States may be a party, at each of the stations above referred to and shall fix the rates therefor, subject to control of such rates by Congress. At such stations and wherever and whenever shore stations open for general public business between the coast and vessels at sea under the provisions of the Berlin convention of 1906 and future international conventions and treaties to which the United States may be a party shall not be so established as to insure a constant service day and night without interruption, and in all localities wherever or whenever such service shall not be maintained by a commercial shore station within 100 nautical miles of a naval radio station, the Secretary of the Navy shall, so far as is consistent with the transaction of governmental business, open naval radio stations to the general public business described above, and shall fix rates for such service, subject to control of such rates by Congress. The receipts from such radiograms shall be covered into the Treasury as miscellaneous receipts.

19. *Secrecy of Messages.*—No person or persons engaged in or having knowledge of the operation of any station or stations shall divulge or publish the contents of any messages transmitted or received by such station, except to the person or persons to whom the same may be directed, or their authorised agent, or to another station employed to forward such message to its destination, unless legally required so to do by the court of competent jurisdiction or other competent authority. Any person guilty of divulging or publishing any message, except as herein provided, shall, on conviction thereof, be punishable by a fine of not more than \$250 or imprisonment for a period of not exceeding three months, or both fine and imprisonment, in the discretion of the Court.

Penalties.—For violation of any of these regulations, subject to which a license under sections 1 and 2 of this Act may be issued, the owners of the apparatus shall be liable to a penalty of \$100, which may be reduced or remitted by the Secretary of Commerce and Labour, and for repeated violations of any of such regulations the licence may be revoked.

For violation of any of these regulations, except as provided in Regulation 19, subject to which a license under section 3 of this Act may be issued, the operator shall be subject to a penalty of \$25, which may be reduced or remitted by the Secretary of Commerce and Labour, and for repeated violations of any such regulations, the licence shall be suspended or revoked.

SEC. 5.—That every license granted under the provisions of this Act for the operation or use of apparatus for radio communication shall prescribe that the operator thereof shall not wilfully or maliciously interfere with any other radio communication. Such interference shall be deemed a misdemeanor, and upon conviction thereof the owner or operator, or both, shall be punishable by a fine of not to exceed \$500 or imprisonment for not to exceed one year, or both.

SEC. 6.—That the expression "radio communication" as used in this Act means any system of electrical communication by telegraphy or telephony without the aid of any

wire connecting the points from and at which the radiograms, signals, or other communications are sent or received.

SEC. 7.—That a person, company, or corporation within the jurisdiction of the United States shall not knowingly utter or transmit or cause to be uttered or transmitted, any false or fraudulent distress signal or call or false or fraudulent signal, call, or other radiogram of any kind. The penalty for so uttering or transmitting a false or fraudulent distress signal or call shall be a fine of not more than \$2,500 or imprisonment for not more than five years, or both, in the discretion of the court, for each and every such offence, and the penalty for so uttering or transmitting, or causing to be uttered or transmitted, any other false or fraudulent signal, call, or other radiogram shall be a fine of not more than \$1,000 or imprisonment for not more than two years, or both, in the discretion of the court, for each and every such offence.

SEC. 8.—That a person, company, or corporation shall not use or operate any apparatus for radio communication on a foreign ship in territorial waters of the United States otherwise than in accordance with the provisions of sections 4 and 7 of this Act and so much of section 5 as imposes a penalty for interference. Save as aforesaid, nothing in this act shall apply to apparatus for radio communication on any foreign ship.

SEC. 9.—That the trial of any offence under this Act shall be in the district in which it is committed, or if the offence is committed upon the high seas or out of the jurisdiction of any particular State or district the trial shall be in the district where the offender may be found or into which he shall be first brought.

SEC. 10.—That this Act shall not apply to the Philippine Islands.

SEC. 11.—That this Act shall take effect and be in force on and after four months from its passage.

Approved, August 13th, 1912.

EXTRACT FROM ACT.

(Dated August 24th, 1912.)

TO PROVIDE FOR OPENING, MAINTENANCE, PROTECTION AND OPERATION OF THE PANAMA CANAL.

B SEC. 6.—That the President is authorised to cause to be erected, maintained, and operated, subject to the International Convention and the Act of Congress to regulate radio communication, at suitable places along the Panama Canal and the coast adjacent to its two terminals, in connection with the operation of the said Canal, such wireless telegraphic installations as he may deem necessary for the operation, maintenance, sanitation, and protection of said Canal, and for other purposes. If it is found necessary to locate such installations upon territory of the Republic of Panama, the President is authorised to make such agreement with said Government as may be necessary, and also to provide for the acceptance and transmission by said system, of all private and commercial messages, and those of the Government of Panama, on such terms and for such tolls as the President may prescribe: *Provided*, That the messages of the Government of the United States and the departments thereof, and the management of the Panama Canal, shall always be given precedence over all other messages. The President is also authorised, in his discretion, to enter into such operating agree-

ments or leases with any private wireless company or companies as may best insure freedom from interference with the wireless telegraphic installations established by the United States.

EXTRACT FROM RULES AND REGULATIONS.

(Dated August 15th, 1919.)

C 40. *Radio Communication.* — As soon as radio communication can be established with the Canal, vessels should report their names, nationality, length, draft, tonnage, whether or not they desire to pass through the Canal, require coal, provisions, supplies, repairs, to go alongside of a wharf, the use of tugs, probable time of arrival, length of stay in port, or any other matters of importance or interest. If this information has been previously communicated through agents or otherwise to the captain of the port, it will not be necessary to report by radio; but the probable time of arrival should always be sent.

41. Control of radio communication is entirely in the hands of the radio shore stations. No vessel will be allowed to interfere in the slightest degree with the Canal radio stations; upon an order being received by a vessel at any time while within the waters under the control of the Canal to discontinue using radio, even if in the midst of transmission of a message, she shall immediately comply.

42. Upon a ship's arriving within the 15-mile limit, and until leaving the 15-mile limit of the Canal Zone, she shall transmit only with low power, not exceeding one-half kilowatt.

43. Messages to stations will be sent only to Colon station (NAX) when in Gatun Locks and to northward thereof, and only to Balboa station (NBA) when in Miraflores Locks and to southward thereof; between these two points ships may work to either station, preferably to the nearer one; the high-power station (Darien) at Radio will not handle commercial work and will not be called for Canal business except in case of emergency.

44. All messages between ships in the Canal Zone and ships at sea must be forwarded through the nearer shore station.

45. Messages from ships in the Caribbean Sea for ships in the Pacific waters, or *vice versa*, shall be routed through the Canal Zone shore stations.

46. All vessels fitted with radio, after leaving the terminal harbour to pass through the Canal, shall keep an operator on watch until the further terminal harbour has been reached; this applies to the time when they are anchored in Gatun Lake, while passing through the locks, or moored to the lock walls, or to any of the wharves in the Canal proper, as well as when they are under way. Messages relating to the ship's movements and the Canal business shall take precedence over all commercial messages.

47. Pilots on vessels passing through the Canal shall have the right to use a vessel's radio freely for the transaction of the Canal business.

48. Under the direction of the pilots, vessels will from time to time report their progress through the Canal; accidents to machinery, propellers, steering gear, equipment, or anything else that may delay them or require assistance; any sickness or casualties that

require medical attendance from Canal officials; or any other matters of importance that may arise.

49. No radio tolls, either coast station or forwarding, will be imposed against ships on radiograms transmitted by ships on Canal business. There will be no charge made against the Panama Canal, by Canal Zone land lines or radio stations, for the transmission of radiograms to ships on Canal business.*

50. No vessel will be allowed to communicate with any lock or signal station while in transit through the Canal, except through the pilot; all messages of any kind must be sent through him. This does not apply to vessels moored at the terminals at Cristobal or Balboa, before entering or after having passed through the Canal, which may wish to communicate through the terminal stations.

51. Vessels in transit through the Canal can communicate with the lock and signal station through the pilots, both by the international code and special signals; information on this subject may be obtained from the Governor of the Panama Canal.

118. In thick and foggy weather vessels will not be allowed to enter the Canal or leave locks or mooring station until the weather has cleared. Vessels in transit, when overtaken by thick or foggy weather, must immediately take every precaution and make preparation to anchor or moor at the first available place, and so remain until the weather clears. Vessels equipped with radio, when overtaken by thick or foggy weather, should immediately so report, in order that the proper fog signals may be made at the mooring stations on the approach of such vessels.

RADIO SERVICE.

Control of Radio.—The United States Government controls radio in the Republic of Panama and contiguous waters. The U.S. Naval Communication Service maintains three Naval Radio Stations in the Canal Zone; coastal stations at Colon and Balboa, and a high-powered station at Darien. In the Republic of Panama it maintains Naval Radio Stations at Cape Mala, La Palma, and Puerto Obaldia. The Cape Mala Radio Station, located at Cape Mala, R. P., at the south-west entrance to the Bay of Panama, is connected by telegraph with the Canal Zone and all telegraph offices in the Republic of Panama. The Radio Stations at La Palma and Puerto Obaldia are located in outlying sections of the Republic of Panama which have no telegraph connections, and are primarily for intercommunication between these districts and other sections of the Republic of Panama and the Canal Zone, through Balboa Radio. Control of radio communication is entirely in the hands of these stations. No vessel will be allowed to interfere in the slightest degree with the Canal radio stations; upon an order being received by a vessel at any time while within the waters under the control of the Canal to discontinue using radio, even if in the midst of transmission of a message, she shall immediately comply.

Commercial Radiograms.—All Naval Radio stations given above, except Darien, are open to commercial traffic.

Canal Business Radiograms.—With the exception of Darien, all Naval Radio Stations given above will handle Canal business addressed to the proper officials of the Panama Canal, its departments and subsidiary com-

* Canal Zone. Itemised lists not allowed.

* As Amended by Executive Order of November 4th, 1914.

panies. No receiving or forwarding charge will be made by the Naval Radio Stations for this service. The first word in the address of such messages should be "GOVT" (Example: "GOVT Port Captain Cristobal,") to show that they are official messages on Canal business. The shore stations reserve the right to decide whether a message is official or commercial in character.

Stations to be Called.—Ships on the Atlantic side will communicate only with Colon (NAX). Ships on the Pacific within 50 miles of Balboa will communicate only with Balboa (NBA). Ships in the Pacific when more than 50 miles from Balboa will communicate with Cape Mala (NNT), from which station messages are relayed to the Canal Zone or Republic of Panama by telegraph. Ships in the Canal, when to the Northward of Darien will work Colon (NAX), when to the Southward of Darien work Balboa (NBA).

Ships will communicate through nearest shore station. On arriving within range of a shore station ships should send a (TR) position report, furnishing data required by Article 28, Service Regulations Affixed to the International Radiotelegraphic Convention, London, 1912. Due to the large amount of radio work in the vicinity of the Canal, and the necessity of reducing interference to a minimum, ships should send the required position report whether they have messages to transmit or not. This is desired in order that the calling of vessels by shore stations having messages for such ships may be reduced to a minimum. Upon receiving a position report from a ship, the shore station will know that the ship is in range and will immediately deliver any messages on file for that ship. Any ship which desires to communicate with a shore station, and has not previously submitted a (TR) report to that station, will be requested to submit such report before any messages are accepted from it.

All TR reports received are given to the Port Captain concerned and to the vessel's agents (if known).

Balboa Radio (NBA) is a distant control (Receiving) station, therefore, in case of emergency, Balboa Radio may be called and communication with it established, though Balboa may at the time be transmitting.

Hours of Service.—Colon, Balboa, and Cape Mala maintain a constant watch, day and night.

La Palma and Puerto Obaldia maintain daily schedules of watches.

EXTRACT FROM SUPPLEMENT TO RULES.

(Dated September 1st, 1913.)

COMMERCIAL SERVICE AT NAVAL RADIO STATIONS.

D Beginning September 1st, 1913, the radio stations of the United States Navy at Colon and Balboa are handling special classes of commercial radiograms, heretofore prohibited, as follows:—

1. Reply paid messages (where both message and answer can be prepaid by the sender).

2. Messages calling for repetition of messages (for verification only). Charge for repeating back is one-fourth the charge for the original message.

3. Radiograms to be delivered by mail. (If received from a ship, these will be mailed from the radio station. "Ocean letters" will be mailed by the ship at the first port of call, or at any port of call designated).

4. Multiple radiograms. These are messages addressed either to several persons at same address or to same person at several addresses served by the same radio station. These messages when received from sea will be separated and sent as so many individual messages over the land wire.

5. Radiograms calling for acknowledgment of receipt. (Such acknowledgment is restricted to notification of date and hour at which the coast station delivered the radiogram to ship addressed; and may be sent by either mail or telegram).

6. Paid service notices. (Sent in order to correct address or text to cancel a message, etc.)

Both stations, Colon and Balboa, are connected by direct wire with the Panama railroad telephone system and radiograms can be filed at any local office. Attention is invited to the fact that no collect messages are handled, and no commercial messages are handled, between stations which are connected by cable or telegraph, as, for instance, to Key West or Port Lincoln.

The time of arrival of all Panama railroad boats is given to the telephone control at Colon as soon as received, and can be obtained there upon request without calling the radio station at Colon.

E EXECUTIVE ORDER. WIRELESS APPARATUS ON OCEAN-GOING VESSELS.

Published in Circular No. 601-16, dated Culebra, C.Z., July 23rd, 1914.

To Require Ocean-going Vessels to be Fitted with Wireless Apparatus.

By virtue of the authority vested in me, I hereby establish the following order for the Canal Zone:—

Sec. 1.—From and after the first day of July, 1915, it shall be unlawful for any ocean-going steamer of the United States, or of any foreign country, carrying fifty or more persons including passengers and crew, to leave or attempt to leave any port of the Canal Zone unless such steamer shall be equipped with an efficient apparatus for radio communication in good working order in charge of a person skilled in the use of such apparatus, which apparatus shall be capable of transmitting and receiving messages for a distance of at least 100 miles, night or day: *Provided*, That the provisions of this order, shall not apply to steamers plying only between the Canal Zone and ports less than 200 miles therefrom.

Sec. 2.—The master or other person being in charge of such vessel which leaves or attempts to leave any port of the Canal Zone in violation of any of the provisions of this order shall, upon conviction, be fined in a sum not to exceed Five Thousand Dollars (\$5,000), and any such fine shall be a lien upon such vessel, and the vessel may be liable therefor in the District Court of the Canal Zone, and

the leaving or attempting to leave by any vessel from each and every port of the Canal Zone shall constitute a separate offence.

SEC. 3.—This order shall take effect from and after this date July 9th, 1914.

EXECUTIVE ORDER.

FREE RADIO SERVICE FOR CANAL BUSINESS.

Published in Circular No. 601-33, dated Balboa Heights, C.Z., November 17th, 1914.

Amending Paragraph 49 of the "Rules and Regulations for the Operation and Navigation of the Panama Canal and Approaches Thereto, Including All Waters Under its Jurisdiction."

F By virtue of the authority vested in me under the Panama Canal Act, paragraph 49 of the "Rules and Regulations for the Operation and Navigation of the Panama Canal and Approaches Thereto, Including All Waters Under Its Jurisdiction," promulgated by Executive Order No. 1990, dated July 9th, 1914, is hereby amended to read as follows:—

49.—No radio tolls, either coast station or forwarding, will be imposed against ships on radiograms transmitted by ships on Canal business. There will be no charge made against the Panama Canal, by Canal Zone land lines or radio stations, for the transmission of radiograms to ships on Canal business.

PARAGUAY

(See also Map Section)

THE inland republic of South America known as Paraguay is divided into two distinct portions by the river bearing the same name. The first Spanish Colony was settled in 1535, and the country remained under Spanish rule until 1811. After a number of vicissitudes, the present constitution was proclaimed on the 25th November, 1870. The legislative authority is vested in a Congress of two houses, the executive being entrusted to a President, assisted by five ministers. It has an area of 75,673 square miles and a population estimated at 1,050,000.

CONTROL.

There are three wireless stations in Paraguay at present open to the public, their control being vested in the Director of Posts and Telegraphs. These stations are situated at Asuncion, the capital of the Republic (or—more strictly—Lambaré, on the outskirts thereof), Concepcion, and Encarnacion. They are identical in capacity and possess a radius of 300 miles by day and 600 miles by night. They were erected by Siemens Schuckert in accordance with a contract made with that firm and the Paraguayan Government in 1913. The Asuncion (Lambaré) station was completed in December, 1914, that at Concepcion in March, 1915, and that at Encarnacion was taken over by the Government in February, 1916.

There are no privately owned stations. The Government has instituted a wireless telegraph school which is attached to the College of Military and Naval Cadets.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Dr. Luis A. Riart	Minister of Interior	Avenida Colombia, Asuncion
(Vacant)	Director-General of Posts and Telegraphs	Calle Yegros, Esq. Bermejo, Asuncion
Juan B. Tendil	Head of Telegraph Office	431 Calle Oliva, Asuncion
Francisco Fernandez ..	Technical Inspector	Calle 14 de Julio, Asuncion

ORGANISATION.

The Paraguayan wireless service is at present confined to the interior of the country, for the Governments of Paraguay and Argentina have not yet been able to come to a working agreement for the maintenance of a public service. An agreement, however, has been entered into by the two Governments to use wireless as an auxiliary to relieve congestion or breakdown of the line system.

The three Government installations are not confined to a specific Government service, but are available for the public service within the country, and occasionally, on emergency, for communication with the exterior.

The War Department have seven subsidiary, or portable, installations for use at the five military centres and on the armed patrol steamers.

ADMINISTRATION.

There are no special laws or regulations affecting the subject, but the text of the Convention referred to above will be found below.

A—Convention between Paraguay and Argentina.

CONVENTION.

A The following is the text of a Convention entered into between the Governments of Paraguay and the Argentine Republic.

Date of the Convention,
November 15th, 1918.

Plenipotentiaries—

For Paraguay: Dr. Eusebio Ayala.

For Argentina: Dr. José Maria Cantilo.

After an interchange of credentials, which were found in order, the following agreement was signed, the object of which is to facilitate communication between the two countries mentioned.

1. For the telegraphic interchange between Argentina and Paraguay radiotelegraphic methods will be used as an auxiliary whenever—owing to the amount of traffic or breakdowns in the terrestrial lines—it may become necessary to use wireless in order to maintain an uninterrupted service.

2. Both the Argentina and the Paraguay offices will use for the exchange of messages the Posadas and Formosa stations, one at a time, or the two if necessary. The two manage-

ments will see to it that the traffic is distributed in such a way as to ensure the quickest service between the hours between 12 noon and 12 midnight, Argentine time. The wavelengths will be of the standard damped type of 600 metres.

3. Whenever it is required, and should it be impossible to carry through the exchange over the stations named in the preceding article, the service may be taken off directly between Buenos Aires and Asuncion.

4. In all matters referring to transmission rates, accounts and service regulations, the Argentine and Paraguay regulations at present in force in the telegraphic service will apply.

5. This Convention will come into effect thirty days after its ratification by the contracting parties, and either party may withdraw at any time by giving 90 days' notice previous to the date when the suspension of the service is intended to take effect.

This Convention is made out in duplicate and signed by the two plenipotentiaries whose seals have been affixed, and they have agreed that the exchange of the ratification will take place in the city of Asuncion within thirty days from this date.

PERSIA

(See also Map Section)

WITH a constitution similar to that of Turkish rule, Persia is ruled by a Shah, Sultan Ahmad Shad. The country is divided into 33 provinces, each under a Governor-General, directly responsible to the government.

The total area of this desert land is about 628,000 square miles and the population between eight and ten million.

CONTROL AND ORGANISATION.

Up to the time of going to press we have been unable to obtain any information relating to wireless in Persia.

PERSIAN GULF

(See also Map Section)

Including: Oman, Bahrein Islands, Aden, Perim, Sokotra, and the Kuria Murai Islands.

OMAN is an independent State in South-Eastern Arabia, whose integrity has been guaranteed by Great Britain and France. It extends along the southern shore of the gulf for about 1,000 miles. It has an area of 82,000 square miles and a population estimated at 500,000. Sultan Seygid Taimur bin Feysil is the reigning head.

The Bahrein Islands are a group situated in the Gulf 20 miles off the coast of El Hasa in Arabia, they have an area of about 300 square miles and support a population of about 110,000.

Aden is a volcanic peninsula on the Arabian Coast, and is an important coaling station for ships voyaging to and from the east. With Perim at the entrance to the Red Sea and the Kuria Muria Islands, the protectorate comprises some 9,000 square miles and supports a population of 54,923.

The Island of Sokotra, off the coast of Africa, is under British Protection, and has an area of 1,382 square miles with a population of 12,000.

CONTROL AND ORGANISATION.

A small Lodge-Muirhead Station was erected in 1910 at Jask, by the Indian Telegraph Department. It was transferred later to Lingah where it is now worked by the Indo-European Telegraph Department.

The India Telegraph Department in 1914-15, erected Marconi Stations at Bahrein (5-kW.), Bushire (5-kW.) and Henjam (3-kW.). When complete they were handed over to the Indo-European Telegraph Department, who maintains and works them.

PERU

(See also Map Section)

THE Republic of Peru, formerly the most important Spanish Vice-royalty in South America, declared its independence on July 28th, 1821, but was not actually free until three years later. Its new constitution was proclaimed on February 4th, 1920, and entrusts the new executive power to a President, the legislation being in the hands of a Senate and House of Representatives. Territorially it is divided into twenty departments and three littoral provinces, the total area being estimated at 722,461 square miles, with a population of about 4,620,201. The capital city is Lima, which is closely connected with Callao, its port on the Pacific coast.

CONTROL.

The control of radiotelegraphy is directed by the Minister of the Interior.

OFFICIAL CONTROLLING WIRELESS TELEGRAPHY.

Official.		Title.	Address.
Sir William Slingo	Administrator-General of Posts and Telegraphs ..	Lima
Mr. S. R. Groser	Engineer-in-Chief of the Radiotelegraphic Service ..	Lima

ADMINISTRATION.

There are fifteen radiotelegraphic stations open to public service in Peru, but no special legislation has been issued, the wireless service being subject to the same regulations as the ordinary wired service, differing therefrom only with regard to rates.

The Radio Service has hitherto been a State monopoly and there are no forms of license in existence.

By virtue of an agreement with the Peruvian Government, Marconi's Wireless Telegraph Co., Ltd., on May 1st, 1921, took over the administration of the Postal Telegraph and Radiotelegraphic Services of the Republic and will operate them for a period of twenty-five years, Sir William Slingo, late Engineer-in-Chief of the British Post Office, having been appointed Administrator-General of Services.

The concession includes the sole and exclusive operation of all national and international wireless telegraph stations within the Republic and the exclusive right to erect any further wireless stations that may be necessary.

In accordance with the terms of the above agreement a programme of reconstruction and reorganisation of the Radio Service is in preparation, and it is anticipated that new laws and regulations affecting radiotelegraphy will in due course be drawn up.

There are at present no time, weather, meteorological, hydrographic or press services.

PHILIPPINE ISLANDS

(See also Map Section)

THE Philippine Islands form a part of the great archipelago known as the East Indies. They lie south-east of the continent of Asia, nearly south of the Japanese Empire, and north of Borneo and Celebes; between the meridians of $116^{\circ} 40'$ and $126^{\circ} 34'$ E. longitude, and between the parallels of $4^{\circ} 40'$ and $21^{\circ} 10'$ N. latitude. The boundaries and the limits of the group are set forth in the paragraph concerning limits in the Treaty of Paris between the United States and Spain, of December 10th, 1898.

In addition to the lands thus delimited, the United States subsequently acquired from Spain the little group of islands known as Cagayan Sulu, and nine other small islands, lying off the north coast of Borneo.

The Philippine Islands have an area of 114,400 square miles, and are made up of 7,083 islands. They have a population of 10,350,730. Considering the Philippine Archipelago by itself, it may be regarded as having the form of a triangle, open at the base and with its most acute angle pointing northward, this being represented by northern Luzon and the Batan and Babuyan Islands. The western leg of the triangle is represented by Palawan and dependent islands, and the eastern one by the Visayan Islands and Mindanao, with the Sulu sea lying between them.

CONTROL.

Several of the stations now operated by the Philippine Insular Government were originally erected by the Signal Corps, United States Army, when that corps operated the telegraph and cable lines of the Philippines, but with the rest of the telegraph system of the Philippine Islands they were during the period from 1903 to 1907 gradually turned over to the Civil Government, the entire telegraph system, other than military lines and wireless stations, being now controlled by the Insular Government and forming a part of the Bureau of Posts.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
<i>U.S. Army and Naval Stations</i>		
Lieut. T. N. Alford. . .	Philippine Communication Superintendent . . .	Manila
<i>Insular Government Stations</i>		
Hon. Mr. D. Jakosalem . .	Secretary of Commerce and Communications . .	Manila
Mr. José Topacio . . .	Director of Posts . . .	Manila
Mr. W. H. Howard. . .	Radio Engineer and Technical Adviser . . .	Manila
Mr. V. P. Villanueva . .	Electrical Engineer of the Bureau of Posts . .	Manila

ORGANISATION.

Nearly all of the commercial wireless traffic of the Philippines is between shore stations, which form an integral part of the telegraph system of the Insular Government.

The Continental Morse alphabet is used for wireless, and the American Morse alphabet for land and cable lines; and the radio laws and regulations of the United States are conformed to as far as local conditions permit. The service is operated and maintained almost entirely by Filipinos.

There are no wireless societies nor amateur or privately owned stations on record in the Philippines. There is one ship station on a Government owned vessel, and several ship stations on privately owned vessels.

There are seventeen land stations open for general public service, and some of the stations operated by the United States Army and Navy are open to ship and foreign traffic, ten of them being operated by the Bureau of Posts. These include five operated by the United States Army or Navy, but not ship stations licensed by the United States Government.

An American manufacturing concern has established a radio broadcasting service for both telegraph and telephone. The range is 600 miles, and is in daily operation.

The Philippine Insular Government has an extensive programme for the erection of additional wireless stations, and the erection of 18 in different parts of the archipelago is now under way.

The Bureau of Posts stations are designed strictly for commercial business and the relief of the cable system. Therefore, there has been no provision for radio compass stations, nor are there any regulations relative to aviation at present. The Bureau of Posts is, however, taking up the question of aerial mail service between the various islands, and it is possible that if such should become a reality there would be regulations in force and several radio compass stations erected.

A comprehensive system of time and weather signals is in operation in these islands.

ADMINISTRATION.

At present it is not possible to give the actual text of the laws regarding radio work. They are, however, practically the same as those in force in the United States, with a few exceptions due to local conditions.

Bills similar to the Radio Act and Ship Act of the United States, regulating radio communication and requiring radio apparatus on certain passenger carrying vessels respectively, will soon be presented before the Philippine Legislature for passage.

POLAND

(See also Map Section)

THE historic Kingdom of Poland has recently been restored as a Polish Republic. Its record has been an unhappy one, culminating in its third and last partition between Austria, Prussia and Russia in 1795. It has an approximate area of 149,042 square miles, and a population of 24,272,505.

CONTROL.

Normally the establishment and control of radiotelegraph stations is vested in the Ministry of Posts and Telegraphs Section of Radio Communication, Department III. A State Wireless Telegraph Society has been formed under the control of the Ministry of Posts and Telegraphs for dealing with all matters relative to radiotelegraphy and radiotelephony.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Wladislaw Gadomski, Jr. . .	Director of Department	Warsaw.
Eugenjusz Stalinger, Jr. . .	Chief of Radiotelegraphic Section	Warsaw.

The following transmitting stations are now in operation :—

A transatlantic central station just outside the town of Warsaw of 400 kW. (antenna current), was the Alexanderson system, built by the Radio Corporation of America. It is equipped with two Alexanderson alternators of 210 kW. each and allows of continuous communication with Rocky Point Station, America.

In Warsaw a 10-kW. station and a 1-kW. valve station for internal communication, together with a 5-kW. telephone station for scientific and meteorological purposes.

At Grudziadz, for European communication, a 10-kW. station.

At Posen a 4-kW. Poulsen arc station and an 8-kW. valve station.

At Cracow a 4-kW. Poulsen arc station is under construction.

At Danzig there is a 1-kW. station.

Plans have been prepared for the erection of transmitting stations for interior and aerial services at Wilno, Lublin, Livóu, Katowice and Lodz, and the existing stations at Cracow and Danzig are being fitted with valve transmitters.

Receiving stations fitted with a "frame antenna" and valve transmitting apparatus, made in Poland by the United Wireless Telegraphy and Telephony Society, are in operation.

Commercial and amateur radiotelegraphy is being considered, and a law is being prepared on this subject.

ADMINISTRATION.

The existing rules and regulations respecting the wireless service are of a temporary nature. They will soon be replaced by regulations established by the civil authorities.

PORTO RICO

(See also Map Section)

THE island of the "Greater Antilles" group in the West Indies known under the Spanish name of Rich Harbour lies with regard to latitude between $17^{\circ} 50'$ and $18^{\circ} 30'$ N.; its longitude ranging from $65^{\circ} 30'$ to $67^{\circ} 15'$ W., and its total area comprising 3,606 square miles. The capital, San Juan, is 1,400 miles from New York and 982 from Key West, Florida. It is administered by a Governor appointed by the President of the United States, with a Cabinet and a Senate and a House of Representatives elected for four years. Its population is 1,299,809.

CONTROL AND ORGANISATION.

The regulation of wireless telegraphy rests in the hands of the Department of Commerce for private stations and in the hands of the United States Navy Department for the Naval Section. No clubs or societies exist in the island. There are private stations worked by the South Porto Rico Sugar Company of Porto Rico (sugar factory), at Ensenada, P.R., connecting with Central Romana (a similar company in the Republic of Santo Domingo). The Ensenada station, owned by the South Porto Rico Sugar Company, is being operated under a general commercial license granted by the U.S. Navy Department, Washington, D.C. It communicates directly with the Romana station, the Santo Domingo City public station, and San Pedro de Macoris station, in the Republic of Santo Domingo; also with ships at sea.

The radio station at San Juan sends out a meteorological bulletin every night at 9 p.m., 75th meridian time, on 2,750 metres, audible radiation. Hydrographic and emergency weather reports are sent when received and also at 8, 12, 16, and 20, 60th meridian time. No time or press signals are sent.

There are no direction finding stations in Porto Rico at present.

There are two stations belonging to, controlled and operated by, the Navy Department of the United States in Porto Rico, one in the city of San Juan and the other in the city of Cayey, P.R.

ADMINISTRATION.

The Laws and Regulations affecting the Naval Radio Stations in Porto Rico are as follows:—

- The International Radio Convention ;
- The National Radio Laws of the United States ; and the
- Navy Regulations and Communication Instructions.

(See under U.S.A.)

PORTUGAL

(See also Map Section)

Including : Cape Verde Islands, St. Thomé and Principe, Azores.

AN independent State since the twelfth century, "England's Oldest Ally" remained a monarchy till 1910. On October 5th of that year the Republic was proclaimed, and on August 20th, 1911, the present constitution was established. Affairs are administered by a President, the two Chambers reserving to themselves the legislative functions.

Portugal is a country with 5,423,132 inhabitants, and has a superficial area of 35,490 square miles. She claims to be the pioneer colonising nation of the modern world, and her colonies still cover an area of 1,111,572 square miles.

CONTROL.

The radiotelegraphic service in Portugal is a state monopoly. No private individual is allowed to erect or work wireless, and may not even own a simple receiver. The only exception made is that in favour of shipping companies, which are allowed to have wireless stations on board their vessels.

-----------------------	---

ORGANISATION.

Portugal's first experiments in wireless telegraphy date from 1905, and were conducted with two small Telefunken stations on a war vessel and the fortress of Cascaes, by the staff of the Posts and Telegraphs. The results, however, were not very satisfactory. Later on, Alvares, Captain of Engineers, carried out experiments on a small scale with two Decretet stations having coherer receivers. In 1907 the first fixed station was set up at the School of Torpedoes and Electricity at Valle de Zebro (Escola de Torpedos e Electricidade).

With this Naval station a series of experiments were made, and it was here that the first studies in wireless originated, and the first officers and sailors of the Portuguese Marine received instruction.

The whole work of installation, tests, and tuition was directed by the naval officer who, at the time, was the instructor at the School of Torpedoes and Electricity, and who was in charge of the Wireless Telegraphy Department.

Nowadays the School of Torpedoes and Electricity at Valle de Zebro, besides having the old apparatus for instruction, possesses a complete Marconi station with all the receivers used in the Navy, and continues to be a Naval School for officers and sailors.

Radiotelegraphy has made considerable headway, especially in the Portuguese Colonies.

The Government has ratified an agreement with the Marconi Company for the erection of radio stations at Lisbon, Madeira, Angola, Mozambique and the Cape Verde Islands.

A concession has been granted for 40 years for the exploitation of these stations on the condition that the administration shall be composed, in the majority, of Portuguese citizens.

Contracts have been entered into between the Colonial Office and the Marconi Company for stations at Timor (Java) and a network of stations at Angola (West Africa). A complete system of installations has been arranged for São Thomé (Gulf of Guinea) and for Mozambique (East Africa). The present Minister of Colonies, Dr. Alexandre de Vasconcellos e Sá, is responsible for the execution of this project.

The Administration of Posts and Telegraphs have also purchased a 5-kW. station for Terceira Island (Azores).

ADMINISTRATION.

The current laws and regulations reprinted below comprise :—

A—Act of July 15th, 1913.

B—Regulations.

C—Decree of April 8th, 1916.

D—Decree of March 29th, 1917.

THE ACT OF JULY 15TH, 1913.

A 1. On the expiration of a period of three months from the approval of the Regulations for the execution of the present law, no Portuguese steam vessel, with accommodation for more than fifty passengers (including crew), shall be permitted to sail from any port without having installed a wireless telegraph apparatus of the system which suits it best, in good working order, and capable of despatching and receiving radiotelegrams within a radius of action which must never be less than 100 miles.

(a) From this provision those steamers are excepted which navigate only between ports situated at distances of less than 200 miles.

(b) For steam vessels, which navigate in the Colonies where there are coastal radiotelegraph stations, and which only occasionally come to the Metropolis, the period granted for the installation of wireless telegraphy, to which the present article refers, shall be six months.

2. The wireless telegraph material of a vessel, and the respective service of transmission and reception of radiotelegrams, shall be under the charge of one or more duly qualified telegraphists.

§ The number of telegraphists, their qualifications, and that of the indispensable auxiliary staff, the organisation of their technical instruction, provisions with respect to the service of supervision, conditions of the installation of the apparatus, and the official verification of their working, shall be

determined pursuant to the Regulation drawn up for the execution of the present law.

3. It is the province of the captain of the vessel to give instructions and orders for the complete carrying out of the laws and regulations in force with respect to the radiotelegraphic service, and he shall exercise the necessary supervision, carrying out and causing to be carried out any provisions which he may consider advantageous for the good working of the said service.

4. The captain shall be held responsible for any negligence in complying with the requirements of Article 1, and on conviction he shall be liable to a fine not exceeding Rs.200 and the suspension of his master's certificate for one year.

5. Negligence or failure on the part of the captain to carry out the provisions of Article 3 shall render him liable to a fine not exceeding Rs.50, which may be accompanied with imprisonment not exceeding one month after the first offence.

6. If there should be a disaster, stranding or loss of the vessel, resulting from the lack of vigilance of the telegraph staff, and the said fault was due to the negligence of the captain in failing to carry out and causing to be carried out the provisions in force relating to the radiotelegraph service, the captain shall be liable to a fine not exceeding Rs.200, accompanied or not, according to the gravity of the offence with suspension of his certificate for a period of from one to five years.

If the serious injury, or the death, of one or more persons should result from the disaster, the penalties applicable shall be respectively those laid down in Articles 368 and 369 of the Penal Code.

7. The offences referred to in Articles 4, 5 and 6 constitute maritime crimes, and shall be judged by the Commercial Maritime Tribunal pursuant to the disciplinary Code of the Mercantile Marine.

8. All the wireless apparatus intended for Portuguese vessels shall be exempt from Customs and Municipal Duty.

9. Any legislation contrary hereto is hereby repealed.

REGULATIONS.

B The following regulations were issued on August 29th, 1913:—

1. Ships may be equipped with any wireless telegraph apparatus which is in keeping with scientific progress.

2. The shipping or any other company may establish and work a wireless telegraph station on board ship. The station must possess a license granted by the Government of the nationality to which the ship belongs. The "class" of the station is mentioned in the license.

3. There are three classes:—

(a) Long voyage passenger steamers with accommodation for more than 150 passengers must maintain continuous service.

(b) The same type of steamer with accommodation for less than 150 passengers must maintain continuous receiving service, whereas the transmission may be limited.

(c) Cargo or fishing boats, or vessels carrying more than 50 persons (including crew), may have limited service.

4. and 5. Wavelength of 300 m., 600 m. and more than 1,800 m. may be employed. Small boats may work on a 300 m. wave when sending, but 600 when receiving. The waves must be as pure and as undamped as possible.

The oscillator must not be directly connected to the antennae, except in case of distress, or on certain small steamers where the energy employed in the primary does not exceed 50 watts.

6. The cabin must be divided into two parts so that the transmitting gear and the spark gap may be separated from the receiving apparatus. Double walls must be used to isolate the interior from the exterior.

7. The instruments must be able to receive and send 100 letters per minute.

8. New installations employing a power of more than 50 watts must possess such arrangements as will enable them to have a range inferior to their normal, the smallest being approximately 15 miles. All old stations must be brought to this standard as soon as possible.

9. The receiving instruments must be able to tune for waves up to 600 m., being highly protected against perturbations.

10. The power measured at the terminals of the generator must not exceed 1 kw. in normal circumstances. An increase is allowed when a station desires to communicate with a land station other than the nearest, at a distance of more than 200 miles from the nearest land station, and when, in exceptional circumstances, the communication cannot be effected with 1 kw.

11. First and second-class steamers must carry an emergency set in as safe a place as is possible. The emergency set must be able to

work for six hours at least at a distance of 80 miles for first class, and 50 miles for second-class steamers.

12. The apparatus must be operated by a telegraphist who possesses a certificate from the Portuguese Government, or, in urgent cases and for one trip only, from any other Government which has signed the International Convention:

13. There are two certificates:—

(a) 1st Class (same as International).

(b) 2nd Class (12 words, adjustment of apparatus, knowledge of each instrument and its work, and rules *re* handling of telegrams).

Service.—Any member of the crew able to assist the telegraphist in his work, and possessing a knowledge of the operation of the apparatus, may be an "auxiliary" operator.

14. Second-class telegraphists may be employed on board where the wireless service is only for the shipping company's requirements or on fishing vessels, or they may act as assistants in cases where there is already one first-class operator. On first-class steamers two first-class telegraphists must be employed.

15. On second-class steamers, one first-class and one second-class telegraphist should be employed; on third-class vessels one second-class telegraphist will suffice.

Service.—As long as land stations do not exist in the Portuguese Colonies, Portuguese steamers plying there are allowed to carry one first-class telegraphist and one "auxiliary."

16. Transmitting must be performed by a first or a second-class telegraphist, except in urgent cases.

17. The certificates state that the telegraphist has taken an oath of secrecy with regard to the correspondence.

18. The captain has authority over the working of the station.

19. Portuguese operators are preferred.

20. Should none be obtainable, foreigners may be employed if they are in possession of the Portuguese Government's certificate.

In urgent cases where no certificated telegraphist is available, provisional certificates may be issued for one voyage.

21. Certificates are supplied by the Commission after the examination of the telegraphist.

22 and 23. Captains are also bound by an oath of secrecy.

24. All telegrams sent and received on board must be registered by the captain on forms supplied by the Government. The date and hour of the sending or reception of these telegrams must be indicated.

25. Only the telegraphists and the captain are allowed to enter the wireless cabin.

26. The wireless room and the bridge must be connected by either a speaking tube or a telephone, unless they are within easy distance of one another.

DECREE OF APRIL 8TH, 1916.

C This decree forbids the installation of either wireless transmitting or receiving stations, but Government can authorise the setting up of receiving stations only.

These said stations, when authorised by Government, are subject to its control, and whenever Government may judge convenient, it may withdraw the same authorisation without any indemnification.

The owners of these stations have to pay in advance the tax of Escudos \$5.50 per annum.

Anyone who sells wireless material is obliged to send to the Government a statement of the material sold, with the names of the persons who have purchased it to identify them. Those who do not fulfil this identification will pay the fine of Escudos \$20.00 to \$100.00, and all the material that he has for sale will be seized by the Government, and will belong to the Government. In case of a second offence he will be prosecuted.

The owner of any receiving station, or any person who may have made use of the same station, and who divulges contents of messages that have been received by such station incurs a penalty.

In case of a second offence he is subject to imprisonment for six months to a year, and a fine.

DECREE OF MARCH 29TH, 1917.

D In consideration of the highest interest of the State, it is undesirable in the existing circumstances that private persons should possess wireless apparatus of any kind, or make use of the same apparatus.

It has been decided that it is desirable to confine the employment of such apparatus to schools of observatories, so as to limit the risk of misuse; and availing ourselves of the authorisation granted by the Executive Power by the Laws Nos. 373 and 491 of September 2nd, 1915, and March 12th, 1916,

We decree by the proposal of the Minister of Works and Social Providence, the following:—

ART. 1.—It is expressly forbidden to private persons to possess or make use of wireless apparatus and fittings, or to import or sell to the public the said apparatus and accessories.

ART. 2.—The owners—whatever they may claim to be its purpose—of apparatus and wireless accessories without conducting wires, will have to deliver the said articles for deposit against receipt; in Lisbon, at the warehouses of the Material of the Posts and Telegraphs; in Oporto, at the Secretary's Office of the Second Electric Circumspection; and in the

other capitals of the administrative districts of the continent and adjacent islands, at the Secretary's Offices of the Electric Sections and Sub-sections, or of the Post and Telegraph Service.

The deliveries in deposit to which this article refers will have to be effected for the Continent of the Republic, in the maximum period of five days from the date when this Decree is published in the "Diário do Governos"; for the adjacent islands in the same period reckoned from the date when the same daily paper reaches there.

ART. 3.—The apparatus and wireless fittings without conducting wire that are in the Government Teaching Institutions, and at the Astronomical and Meteorological Observatories, in the first case for the purpose of demonstration, and in the second case for scientific tests, are to be under the safe keeping of the directors of the same institutions and observatories, and will be used only for those purposes and in the presence of the said directors and under their entire responsibility, in the presence of the respective teachers and observers.

ART. 4.—He who transgresses the stipulations of this Decree incurs a penalty of Escudos \$20.00 to \$100.00, which will be fixed and collected by the Administration of Posts and Telegraphs; when it is paid voluntarily, the same Administration will order all the material to be seized, which will then belong to the Government.

In case of a second offence the fine will be fixed at its maximum.

If the fine is not paid voluntarily, the transgressors will be handed over to the judiciary, in order to be judged and the penalty imposed by the correctional police.

In Lisbon and Oporto the jurisdiction will concern the tribunal of transgressions.

ART. 5.—This Decree will come into force immediately, and will be valid to the end of the European War, after which the apparatus and wireless fittings which were voluntarily delivered will be returned to their owners, against receipt as to the conditions of Article 2.

ART. 6.—All legislation to the contrary is hereby revoked.

PORTUGUESE EAST AFRICA

(See under MOZAMBIQUE.)

PORTUGUESE GUINEA.

(See also Map Section)

THIS Portuguese Colony, situated on the West Coast of Africa, is bounded by the limits fixed by the Convention with France held on May 12th, 1886, and is entirely enclosed on the land side by French possessions. The estimated population is 289,000 and the area 13,940.

ORGANISATION.

The wireless telegraph installation has not yet been completed but all the apparatus has been received and there are three stations in the course of erection.

ADMINISTRATION.

Up to the time of going to press we have been unable to obtain any further information relating to wireless in Portuguese Guinea. A reference, however, is to be found under Portugal.

RHODESIA

(See also Map Section)

Including : Northern Rhodesia.

RHODESIA comprises the whole region extending from the Transvaal Province northwards to the borders of the Congo State and Tanganyika Territory. It is under the administration of the British South Africa Company, and is divided up into Northern Rhodesia and Southern Rhodesia for administrative purposes. The combined area is 440,000 square miles, with a population of 1,035,000.

CONTROL AND ORGANISATION.

Wireless telegraphy is under the control of the Department of the Administrator and the principal assistants of the Postmaster-General. There are at present no official wireless stations in operation, but authority has been given for the erection of a small wireless telegraph installation at Bulawayo for experimental and instructional purposes. Several applications have recently been made for private wireless stations, and legislation is pending regarding the granting of such licenses. The wireless sets installed in connection with the Cape to Cairo air flight are to be maintained.

ADMINISTRATION.

Southern Rhodesia regulates radiotelegraphy within its border by the "Electric Telegraph Amendment Ordinance" of 1904, and sundry Notices of 1912, the text of which will be found below.

It is possible that legislation and regulations will become necessary in connection with aerial navigation which is now in course of development, and efforts are being made to secure, as far as possible, uniformity with the proposed laws and regulations of the Union of South Africa on this subject.

It is proposed to repeal Section C of Government Notice No. 391 of 1912, to introduce new legislation as printed below—

No permanent arrangements have yet been made for the transmission of time and weather and meteorological signals.

A—Electric Telegraph Amendment Ordinance, 1904.

B—Postal Notice No. 55 of 1912.

C—Government Notice No. 391 of 1912.

D—Amendment to Ordinance of 1906 regarding the issue of licenses.

TELEGRAPH (AMENDMENT) ORDINANCE.

A The term "electric telegraph" whenever used in the "Electric Telegraph Act, 1861," or any law amending the same or relating to "electric telegraphs," shall be interpreted as including any system or means of conveying signs, signals, or communications by electricity, magnetism, electro-magnetism, or other like agency, and whether with or without the aid of wires, and including the system commonly known as wireless telegraphy, or ætheric signalling, and any improvements or developments of such system; and the term "line of electric telegraph" shall be interpreted as including any apparatus, instrument, mast, standard, wire, substance, matter, or thing whatever, which is, or may be, used for the purpose of sending, transmitting, conveying, or receiving such signs, signals, or communications.

2. The meaning of the term "person" shall be further extended so as to include individuals, partnerships, companies, and corporations.

3. The provision of the first section of the said Act as to its application to Southern Rhodesia shall be read and construed as including the territorial waters thereof.

4. Within Southern Rhodesia, or the territorial waters thereof, no person not thereto expressly authorised by some law shall erect or make use of any mast, standard, or apparatus of any kind, for the purpose of signalling without wires by means of electricity, magnetism, electro-magnetism, or other like agency, or shall erect or construct any line of electric telegraph, except under a license to be granted by the Administrator.

5. The Administrator may authorise the issue of a license for the establishment or use of any apparatus or installation for the transmission of signs, signals, or communications, by electric telegraph, with or without the aid of wires, and may revoke the same at any time, and there shall be payable annually in respect of such a licence such sum not exceeding One Hundred Pounds sterling, as may be fixed by regulation.

6. The terms and conditions of such license, and the duration thereof, shall be subject to such regulations as may from time to time be made by the Administrator.

7. Any person who shall establish or use, or attempt to establish or use, any such apparatus or installation as is mentioned in Sections

1 and 4 of this Ordinance, in contravention of the provisions thereof, or of any other law relating to electric telegraphs, or of any regulation thereunder, shall be liable upon conviction to forfeit all apparatus so used, and to a penalty not exceeding Two Hundred and Fifty Pounds, and, in default of payment, to imprisonment, with or without hard labour, for a period not exceeding three months, and, in case of a second or subsequent conviction, in addition to such forfeiture to a penalty not exceeding Five Hundred Pounds, or in default of payment to imprisonment, with or without hard labour, for a period not exceeding six months.

8. Any Magistrate or Justice of the Peace before whom information shall be given on oath by credible persons, that the provisions of this Ordinance are being, or have been, or are likely to be infringed, may issue a search warrant, and authorise the seizure of any instruments, apparatus or appurtenances reasonably suspected to be intended for use in such contravention.

9. Notwithstanding the provisions of Section 4 of "The Electric Telegraph Act, 1861," all regulations made under the authority of that Act shall be published in the *Gazette*, and be subject, *mutatis mutandis*, to the provisions of Section 7 of Act No. 5 of 1883 of the Cape of Good Hope.

10. This Ordinance may be cited as the "Electric Telegraph Amendment Ordinance, 1904," and shall be read as one with "The Electric Telegraph Act, 1861," of the Cape of Good Hope, and the "Telegraph Protection Ordinance, 1901," and the said laws may be cited together as the "Electric Telegraph Laws, 1861 to 1904."

POSTAL NOTICE No. 55 OF 1912.

B Public attention is hereby directed to the provisions of the "Electric Telegraph Amendment Ordinance, 1904," under which no person not thereto expressly authorised by some law shall erect or make use of any mast, standard or apparatus of any kind for the purpose of signalling without wires by means of electricity, magnetism, electro-magnetism or other like agency, or shall construct any line of electric telegraph except under a licence to be granted by the Administrator.

The term "Line of Electric Telegraph" is defined as any apparatus, instrument, mast, standard, wire, substance, matter or thing whatever which is or may be used for the purpose of sending, transmitting, conveying or receiving signs, signals, or communications.

All persons having, or desiring to have, such lines of electric communication, including telephone lines, whether on their private property or otherwise, are hereby notified that application for license to use such lines must be made to the Administrator through the Postmaster-General.

The license fees payable in respect of such lines, as published in Government Notice No. 391 of 1912 are as follow:—

(a) 1s. per annum for a private telephone or telegraph line exclusively on the private property of the person constructing and using the same;

(b) 10s. per annum for a private telephone or telegraph line passing beyond the boundaries of the owner's land. (The license does not confer any right to erect telephone or telegraph lines outside the boundaries of the applicant's land, and the applicant must make his own arrangements in this regard);

(c) £50 per annum for any installation of wireless telegraphy or telephony.

All persons having in use lines of electric communication which have not been authorised by the Administrator are hereby notified that unless the required permission be applied for within one month of the date of publication of this Notice they will render themselves liable to the penalties provided in Section 7 of the Telegraph Ordinance above referred to.

GOVERNMENT NOTICE.

No. 391 of 1912.

DEPARTMENT OF POSTS AND TELEGRAPHS.

The Treasury, Salisbury,

December 19th, 1912.

C It is hereby notified for public information that His Honour the Acting Administrator, with the advice of the Executive Council, has been pleased to approve of the following Regulations regarding the issue of licenses for installations of private telephones, telegraphs, or other means of electric communication, whether with or without wires, in terms of section 5 of the "Electric Telegraph Amendment Ordinance, 1904."

By command of His Honour the Acting Administrator in Council.

P. D. L. FLYNN, Acting Treasurer.

When any person is authorised to establish or use any means of electric communication as defined in the "Electric Telegraph Amendment Ordinance, 1904," the Postmaster-General may issue to such person an annual license for the use of such line on payment in advance of the undermentioned fees, namely:—

(a) 1s. per annum for a private telephone or telegraph line exclusively on the private property of the person constructing and using the same;

(b) 10s. per annum for a private telephone or telegraph line passing beyond the boundaries of the owner's land. (The license does not confer any right to erect telephone or telegraph lines outside the boundaries of the applicant's land, and the applicant must make his own arrangements in this regard);

No.

June, 1922.

D It is hereby notified that under the powers conveyed by Section 6 of the "Electric Telegraph Amendment Ordinance, 1904," the following regulations in regard to the issue of licenses for the establishment and operation of private wireless telegraph or telephone installations shall have effect from the date of this notice.

1. Section C of Government Notice No. 391 of 1912 is hereby cancelled.

2. No license shall be issued except under the authority of the Administrator and on payment of such annual fee as may be specified therein, not exceeding one hundred pounds sterling.

3. Applications for licenses must be addressed to the Postmaster-General, and must contain the following information:—

(a) The full name and occupation of the occupant;

(b) The address at which the apparatus is proposed to be installed;

(c) A full description of the apparatus, with such diagrams as may be required;

(d) The purpose for which the apparatus is proposed to be used; and

(e) Generally such other information as may be required by the Postmaster-General.

4. An applicant may further be required:—
 (a) To produce evidence of British birth or nationality;
 (b) To furnish two approved written references as to character;
 (c) To satisfy the Postmaster-General by examination or otherwise that he has attained a knowledge of the regulations of the International Radiotelegraphic Convention in so far as they relate to the prevention of interference and impose certain duties on all wireless operators, and that he can read by sound Morse signals at the rate of 12 words per minute; and
 (d) To satisfy the Postmaster-General that he has in view some definite object of scientific value or general public utility.
5. Each license issued under these regulations shall contain a schedule setting forth:—
 (a) The maximum power which may be used;
 (b) The maximum wavelength;
 (c) The maximum dimensions of the aerial;
 (d) The stations, if any, with which communication may be established; and
 (e) Such other details as may be required.
- And the licensee shall not at any time exceed or vary the limits or conditions therein laid down except with the consent in writing of the Postmaster-General.
6. The granting of any license under these regulations shall not in any way vary or detract from the rights, powers or privileges of the

Postmaster-General as defined by law or regulation, nor shall it involve any obligation or responsibility on the Postmaster-General for any matter or thing which may be done by the licensee or his agents.

7. All apparatus and plant installed under license shall be subject to the approval of the Postmaster-General, and to inspection by any of his officers duly authorised thereto from time to time.

8. The licensee shall comply with all directions which shall be given to him by the Postmaster-General, and shall at any time cease to work, or shall completely dismantle the licensed apparatus and plant upon notice to do so in writing from the Postmaster-General.

9. The licensee shall not divulge to any unauthorised person, or make any use whatever of any message coming to his knowledge by means of his apparatus and not intended for his use.

10. The licensee shall account to the Postmaster-General for any rates or fees that may be chargeable on any message passing through his apparatus.

11. Except with the consent in writing of the Postmaster-General the licensee shall not permit the use of his apparatus by any other person nor shall he assign or dispose of any rights, powers or privileges granted to him by license.

12. The Postmaster-General may at any time give notice in writing to determine any license granted under these regulations.

RUMANIA

(See also Map Section)

THE country was formed by the fusion of the two Principalities of Moldavia and Wallachia on December 23rd, 1861, and its first ruler was Colonel Cuza, who had, in 1859, been elected "Hospodar" or "Lord" of the two Principalities, assuming the Government under the title of Prince Alexandru Joan I. The present ruler is Ferdinand I. The total population is 8,762,092 and the area of the Kingdom 122,282 square miles.

CONTROL.

All wireless telegraphic or telephonic services and stations are owned and operated by the State under the Direction Special of Radio Communications which forms part of the Ministry of Communications.

Authority to possess installations is given to scientific institutions, and also to those engaging in special wireless research work.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
M. Emile Gurgea, Dr. Sc.	Director of Radio Communications. . . .	Str. Renasterei, Nr. 6, Bucharest
Geles Emile	Technical Inspecting Engineer	Bucharest
M. Cottesco Cottesco	Wireless Engineer in the Wireless Service, Technical Director	Bucharest
M. B. Nicolesco-Dorobantu	Engineer in the Wireless Service	Bucharest
M. Dumitrescu Aurel	Technical Engineer.	Bucharest

The following is the position regarding the wireless stations in Rumania:—

International Service Stations	3
Interior Service Stations	3
Military and Fluvial	4
Under construction	27

ORGANISATION.

In 1915 Bucharest was cut off from telegraphic communication with the West, and an improvised wireless station of 8-10 kW. (50 cycles) was constructed from laboratory apparatus. A second station with an alternator (100 cycles) was also constructed in the Carol Park, Bucharest, by means of which communication was established with Athens, Rome and Paris. Several months later the Ministry of War constructed a new station of about 20 kW. (100 cycles), which only worked over small distances because shortly afterwards a 150 kW. station, system S.F.R. spark 1,000 cycles, with a horizontal antenna supported by eight towers 325 ft. high was erected at Herastreu (Bucharest). At the same station there existed an S.F.R. installation of 15 kW. These two S.F.R. stations afforded excellent wireless communication until the evacuation of Bucharest in November, 1916, when the 15 kW. station was installed at Vaslui (Moldavia), where it is still located—and established communication with Salonica and the 150 kW. station at Botosani (North Moldavia), where it worked until the evacuation of the latter town (June, 1917). The principal station at Herastreu (Bucharest), which was destroyed during enemy occupation, is being rebuilt. The eight metal towers, which were carried off by the Armies of Occupation, are being replaced by eight others about 365 ft. high, of which seven are ready. Whilst awaiting the proximate reinstallation of the 150 kW. station, a new 15 kW. station has been constructed on the spark system (600 cycles). The installation will soon be completed by a 50 kW. arc set, and will be fitted for automatic transmission and reception.

The whole system of radio communication is at present undergoing complete reorganisation, and it is hoped that by the beginning of this summer will be established and working.

A comprehensive system of public correspondence, meteorological, press and time signals is being drawn up and will be put into operation as soon as the new stations under construction are completed.

ADMINISTRATION.

Rumania took part in the various International Radiotelegraphic Conferences.

An entirely new set of Laws and Regulations concerning radiotelegraphy and radiotelephony are being drawn up and will shortly be passed, but up to the time of going to press no information is to hand regarding them.

RUSSIA

(See also Map Section)

Including : Bokhara, Khiva Armenia, Azerbayan, Ukraïne.

UNTIL March, 1917, this vast area was administered by the late ex-Czar Nicholas II, who was descended, in the female line, from Michael Romanoff, elected Czar in 1613 after the extinction of the House of Rurik. At the date above referred to, the Russian Duma carried through a *coup d'état*, as a result of which Czar Nicholas abdicated.

The approximate area is 8,166,130 square miles, and had originally a population of 131,546,045.

ADMINISTRATION.

Wireless telegraphy is extensively used throughout these wide territories; but we are not at present in a position to give any information regarding Laws and Regulations. Reference to the 1921 edition of the Year-Book will give such Statutes and Regulations as were in existence prior to the *coup de état* mentioned above.

SAINT HELENA

(See also Map Section)

Including : Tristan da Cunha.

THE lonely little island of St. Helena, with an area 47 square miles, in the South Atlantic, lies about 800 miles from the nearest land (Ascension Island) and 1,200 miles from the West Coast of Africa. Its claim to fame rests upon the fact that it formed the place of exile of the great Napoleon.

St. Helena is an Admiralty coaling station and a resting place for the Eastern Telegraph Company's cable between Cape Town and St. Vincent (Cape de Verdes). Its area is 47 square miles with a population of 3,747.

Tristan da Cunha is a small group of islands in the Atlantic half way between the Cape of Good Hope and South America. At present there is no wireless communication, but efforts are being made to erect a set suitable for communication with the outer world.

ADMINISTRATION.

Wireless Telegraphy is administered under the following Ordinance and Regulations:—

A—Wireless Telegraphy Ordinance, No. 2 of 1913.

B—Regulations.

IN THE FOURTH YEAR OF THE REIGN OF HIS MAJESTY KING GEORGE V.

MAJOR HARRY EDWARD SPILLER CORDEAUX,
Companion of the Most Honourable Order
of the Bath; Companion of the Most
Distinguished Order of Saint Michael and
Saint George; Governor and Commander-
in-Chief. 14th July, 1913.

A An Ordinance to provide for the regulation of wireless telegraphy.

Be it enacted by the Governor of
St. Helena as follows:—

I. This Ordinance may be cited as the
"Wireless Telegraphy Ordinance, 1913."

II. In this Ordinance "Wireless Telegraphy" means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent or received: Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

III. A person shall not establish any wireless telegraphy station or install or work any apparatus for wireless telegraphy in any place or on board any ship registered in the Colony except under and in accordance with a license granted in that behalf by the Governor.

2. Every such license shall be in such form and for such period as the Governor may determine, and shall contain the terms, conditions and restrictions on and subject to which it is granted.

IV. A person shall not work any apparatus for wireless telegraphy installed on any merchant ship, whether British or foreign, while that ship is in the territorial waters of the Colony, otherwise than in accordance with regulations under this Ordinance.

V. The Governor in Council may from time to time make regulations for carrying into effect the purposes of this Ordinance, and such regulations shall on publication in the *Gazette* have the same effect as if enacted in this Ordinance.

2. The regulations in the Schedule to this Ordinance shall have effect except in so far as they may be amended or rescinded by regulations made under the authority of this section.

3. If at any time, in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters of the Colony shall be subject to such further regulations as may be made by the Governor from time to time, and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

VI. If a Magistrate is satisfied by information on oath that there is reasonable ground for suspecting that a wireless telegraph station has been established without license in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place, or on board any merchant ship without a license in that behalf, or contrary to the provisions of any regulations made under this Ordinance, or of any license granted under this Ordinance, he may grant a search warrant to any police officer or any person appointed in that behalf by the chief of police and named in the warrant and a warrant so granted shall authorise the police officer or person named therein to enter and inspect the station, place, or ship and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

VII. (1) Any person who shall offend against any provision of this Ordinance or any of the regulations made thereunder shall be liable on summary conviction for every such offence to a fine not exceeding £50, and upon such conviction the Court may order that any apparatus for wireless telegraphy in connection with which the offence was committed shall be seized and forfeited.

2. Proceedings shall be taken before the police magistrate on the complaint of the chief of police or of any other person thereto authorised by him in writing, and the procedure

shall be the same as the procedure for the time being in force in respect of offences punishable on summary conviction.

VIII. "The Wireless Telegraphy Ordinance, 1912," is hereby repealed.

GOD SAVE THE KING !

Given under the Public Seal of the Island of St. Helena this 14th day of July, 1913.

By command of His Excellency the Governor,
(Signed) A. HANDS,
Chief Clerk.

REGULATIONS.

Made by the Governor in Council under Ordinance No. 2 of 1913, entitled "An Ordinance to provide for the Regulation of Wireless Telegraphy."

B

I. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the Colony shall be worked in such a way as not to interfere with

(a) Naval signalling, or

(b) the working of any wireless telegraph station lawfully established, installed or worked in the Colony or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

II. In these Regulations "Naval Signalling" means signalling by means of any system of wireless telegraphy between two or more ships

of His Majesty's Navy, between ships of His Majesty's Navy and Naval Stations, or between a ship of His Majesty's Navy or a Naval Station and any other wireless telegraph station whether on shore or on any ship.

III. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour or bay of the Colony except with the special or general permission of the Governor.

IV. For the purpose of any proceedings under these regulations the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

V. Any summons or other document in any proceedings under these regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

VI. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

Made by the Governor in Council this 14th day of July, 1913.

(Signed) A. HANDS,
Chief Clerk.

SAINT LUCIA

(See under BRITISH WEST INDIES.)

ST. PIERRE AND MIQUELON

(See also Map Section,

SITUATED close to the south coast of Newfoundland, these two groups of islands form a French Colony under an Administrator. They have an area of 93 square miles, and support a population of 3,918.

CONTROL AND ORGANISATION.

Up to the time of going to press we have been unable to obtain any special information relating to wireless in this colony. A reference, however, is to be found under France and Algeria.

SALVADOR

(See also Map Section)

THE independent Republic of El Salvador is situated on the West Coast of Central America, and occupies an area estimated at 13,183 square miles. The population, according to the Census of 1919, numbers 1,501,000. It originated in the course of the dissolution of the Central American Federation (Guatemala, El Salvador, Honduras, Nicaragua, and Costa Rica) which took place in 1839.

The form of Government is Republican, democratic and representative, with three branches of Administration: (1) The Executive, which comprises the President and Cabinet Ministers; (2) the Legislature or National Assembly; and (3) the Judiciary.

CONTROL AND ORGANISATION.

The only wireless station was erected by the Government and inaugurated in September, 1917. It is situated at the southern end of the city of San Salvador, near the military post "El Zapote." The station was presented to this Government by the Government of Mexico, and is known by the name of "Estación Venustiano Carranza." It is open to public correspondence with ships.

Radiotelegraphy is a State monopoly and is under the control of the Telegraph and Telephone Administration, which forms one of the departments of the "Ministerio de Gobernacion y Fomento." Private companies or individuals are permitted under license from the Government to erect and work wireless telegraph and telephone stations provided the present contract with the Cable Company is not infringed.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Señor Dr. don Arturo Argüello		
Loucel	Minister of Public Works	San Salvador
Señor Don Ricardo Posada ..	Director of Telegraphs	San Salvador

ADMINISTRATION.

At present there are no special laws regulating wireless telegraphy, and the only publication which deals with this subject is the *Revista Telegrafica*, the official organ issued by the Director-General of Posts and Telegraphs, wherein are reported any such notices and items.

SAMOA ISLANDS

(See also Map Section)

THE Dutch were the original owners of these islands in 1722, but in 1872 the Harbour of Pagopago, in Tutuila, was ceded to the United States for a naval and coaling station. After various changes of ownership the islands (east of 171° West of Greenwich) were finally ceded to the United States in 1900, Germany retaining the remainder of the group.

The area of the American possession is 102 square miles with a population of 8,324.

CONTROL AND ORGANISATION.

Up to the time of going to press we have been unable to obtain any special information relating to wireless in Samoa. A reference, however, is to be found under the United States of America.

SAN MARINO

(See also Map Section)

THE independent Republic of San Marino is embraced in the area of Italy. It claims to be the oldest state in Europe. The area of this Republic is 38 square miles with a population of 12,027.

CONTROL AND ORGANISATION.

Up to the time of going to press we have been unable to obtain any special information relating to wireless in San Marino. Reference, however, may be made under Italy.

SARAWAK

(See under BRITISH NORTH BORNEO.)

SERB, CROAT AND SLOVENE STATE

(See also Map Section)

THIS country was formed by the fusion, under the terms of the European Peace Treaty, of Servia, Montenegro, and the provinces of Bosnia and Herzegovina, which were annexed by Austria in 1908. Alexander I is the reigning king. The estimated area is 95,628, with a population of 11,337,686.

CONTROL AND ORGANISATION.

Up to the time of going to press we have been unable to obtain any information relating to wireless in this State.

SEYCHELLES ISLANDS

(See also Map Section)

THIS Colony consists of a group of islands belonging to Great Britain, almost in the middle of the Indian Ocean, and 600 miles north-east of Madagascar. Formally associated with Mauritius, the Colony of Seychelles was at one time administered from that island; but in 1888 a special Administrator was created, and the occupant of the post in 1903 was raised to the rank of Governor.

The principal island is Mahé (52½ square miles), and the Colony includes a number of dependent islands, having a total area of 156 square miles, and a population of 24,811.

CONTROL AND ORGANISATION.

There are no private or commercial wireless installations. The only installation in the Colony was erected in 1915 at North-West Bay, Mahé, and belongs to the Admiralty.

This station was closed for communication purposes on July 15th, 1921, and a "Care and Maintenance Party" was left to keep the plant in running order. This party was withdrawn in March, 1922.

There is no official of the Seychelles Government Service who is specially charged with the supervision of radiotelegraphy. Its control forms part of the general administration, of which the principal personnel will be found below.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>

ADMINISTRATION.

Radiotelegraphy is administered under the Ordinances, the text of which will be found below, and which cancel "The Telegraphic and Electrical Stations Ordinance, 1903," printed in our former issues.

The list of current rules here included is as follows;—

A—Ordinance No. 3 of 1914.

B—Ordinance No. 11 of 1917.

C—Regulations (No. 127) thereunder.

ORDINANCE No. 3 OF 1914.
Dated February 19th, 1914.

Enacted by the Governor of the Colony of Seychelles with the advice and consent of the Legislative Council thereof.

A To provide for the regulation of wireless telegraphy.

Be it enacted by the Governor of the Colony of Seychelles with the advice and consent of the Legislative Council thereof, as follows:—

1. This Ordinance may be cited as "The Wireless Telegraphy Ordinance, 1914."

2. In this Ordinance and in any regulation made thereunder the expression "Wireless Telegraphy" means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent and received: Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. The Governor may whenever he shall deem it expedient to do so license the establishment of any wireless telegraph station or the installation or working of any apparatus for wireless telegraphy in any place in the Colony or on board any British ship registered in the Colony.

4. (1) No person shall establish any wireless telegraph station or install or work any apparatus for wireless telegraphy in any place in the Colony or on board any British ship registered in the Colony except under and in accordance with a license granted in that behalf by the Governor.

(2) Every such license shall be in such form and for such period as the Governor in Executive Council may determine and shall contain such terms, conditions and restrictions on and subject to which the license is granted as the Governor shall consider desirable in the public interest.

5. (1) If any person establishes a wireless telegraph station without a license in that behalf or installs or works any apparatus for wireless telegraphy without a license in that behalf he shall be liable to a fine not exceeding two thousand rupees (Rs. 2,000) or to imprisonment for a term not exceeding twelve months and in either case be liable to forfeit any apparatus for wireless telegraphy installed or worked without a license, but no proceedings shall be taken against any person under this Ordinance without the previous sanction of the Crown Prosecutor.

(2) If the Chief Justice or the Police Magistrate is satisfied by information on oath that there is reasonable ground for believing that a wireless telegraph station has been established without a license in that behalf or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any ship within the jurisdiction without a license in that behalf he may grant a search warrant to any Police Officer to enter and inspect the station, place or ship and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

6. (1) The Governor in Executive Council may make regulations for all or any of the following matters:—

(i) for prescribing the form and manner in which applications for license under this Ordinance are to be made;

(ii) for prescribing the fees payable on the grant of any license;

(iii) for regulating the manner in which apparatus for wireless telegraphy on board a merchant ship whether British or foreign in the waters of the Colony shall be worked so as to prevent interference with naval signalling or the working of any wireless telegraph station lawfully established, installed or worked in the Colony or the waters thereof and so as to not interrupt or interfere with the transmission of any wireless messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea;

(iv) for prohibiting except with the special or general permission of the Postmaster of the Colony the working or using of any apparatus for wireless telegraphy on board a merchant ship whether British or foreign whilst such ship is in any of the harbours of the Colony;

(v) for prohibiting or regulating in case at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy on board merchant ships whether British or foreign in the waters of the Colony the use of wireless telegraphy on board such ships while in such waters by such further rules as the Governor may see fit to make from time to time and either in all cases or in such cases as may be deemed desirable.

(2) Provided that no regulations made in respect of the matters described in paragraph (iii) (iv) and (v) of this section shall apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

7. When an applicant for a license proves to the satisfaction of the Governor that the sole object of obtaining the license is to enable him to conduct experiments in wireless telegraphy a license for that purpose shall be granted subject to such special terms, conditions and restrictions as the Governor may think proper but shall not be subject to any rent or royalty.

8. Every omission or neglect to comply with and every act done or attempted to be done contrary to the provisions of this Ordinance or of any regulations made thereunder or in breach of the conditions and restrictions subject to or upon which any license has been issued shall be deemed to be an offence against this Ordinance and for every such offence not otherwise specially provided for the offender shall in addition to the forfeiture of any articles seized be liable to a fine of one thousand Rupees (Rs. 1,000).

9. Ordinance No. 4 of 1903 is hereby repealed.

ORDINANCE No. 11 OF 1917.

AN ORDINANCE TO AMEND ORDINANCE No. 3 OF 1914.

Dated September 1st, 1917.

B Be it enacted by the Governor of the Colony of Seychelles by and with the advice and consent of the Legislative Council thereof, as follows:—

1. This Ordinance may be cited as "The Wireless Telegraph (Amendment) Ordinance, 1917," and shall be construed as one with the Wireless Telegraph Ordinance, 1914.

2. Section 6 (iv) of the Wireless Telegraphy Ordinance, 1914, is hereby repealed and replaced by the following:—

(iv) For prohibiting except with the general or special permission of the Governor, the working or using of any apparatus for wireless telegraphy on board any ship whether British or foreign other than His Majesty's ships of war, whilst such ship is in the waters of this Colony and for the control or disposal of any apparatus, instrument or thing which may be used in connection with wireless telegraphy on board any ship (other than His Majesty's ships of war) whilst such ship is in the waters of the Colony.

3. Section 6 (2) of the Wireless Telegraphy Ordinance, 1914, is hereby repealed.

4. (1) The Governor may appoint officers for the purpose of seeing that the provisions of the Wireless Telegraphy Ordinance, 1914, as amended by this Ordinance, and any regulations made thereunder are complied with and it shall be lawful for such officers to go on board any ship whether British or foreign whilst any such ship is at anchor in the waters of the Colony to see that such provisions are complied with.

(2) If any such officer is molested, obstructed, hindered or insulted while in the execution of his duties an offence shall be deemed to have been committed.

5. For the purpose of any proceedings under the Wireless Telegraphy Ordinance, 1914, as amended by this Ordinance, or under any regulations made thereunder, the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship and for any breach of the Wireless Telegraphy Ordinance, 1914, as amended by this Ordinance, and any regulations made thereunder.

6. Any summons or other document in any proceedings under the Wireless Telegraphy Ordinance, 1914, as amended by this Ordinance, shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been

committed with the person being or appearing to be in command or charge of the ship.

7. The regulations published in *Gazette* No. 22 of 1914 under Government Notification No. 52 of 1914 are hereby repealed.

Passed in the Legislative Council at a meeting held on the 27th August, 1917.

REGULATIONS.

No. 127 of 1917.

C 1. The radiotelegraph stations on board ships (other than His Majesty's ships of war) shall not be worked whilst such ships are within any harbour or bay of the Colony.

2. For the proper enforcement of section 1 of these regulations ships of British register in any harbour or bay of the Colony must completely disconnect their aerial wires from their radio apparatus, the ends of such wires being suspended entirely clear of the radiotelegraph cabin, preferably from the main rigging, in such a manner as to show they are properly disconnected.

3. (1) Ships of foreign register in any harbour or bay of this Colony must, subject to the provisions of sub-section 2 of this section, take down their aerial wires completely and disconnect the same from their radiotelegraph apparatus.

(2) Ships of foreign register remaining in a harbour or bay of this Colony for less than twelve hours may, at the discretion of the Governor, be permitted to leave their aerials up, provided the same are disconnected in accordance with the provisions of section 2 of these regulations.

4. Any officer appointed under the provisions of section 4 of Ordinance No. 11 of 1917 may order that the radiotelegraph cabin on board any ship (other than His Majesty's ships of war) be sealed and he shall thereupon affix his seal to such cabin.

If any seal so affixed is removed or tampered with an offence shall be deemed to have been committed against these regulations.

Made by His Excellency the Governor in Executive Council at a meeting held on the 24th day of September, 1917.

SIAM.

(See also Map Section)

THE Kingdom known to us as Siam, to the natives as Muang Thai, lies between British Burma and French Indo-China. Its integrity is guaranteed by France and Great Britain under mutual agreement. The form of government is an absolute monarchy, with an Executive Council of ministers. The reigning king is Chao Fa Maha Vajiravudh.

The total area of Siam (inclusive of all the islands) measures about 198,900 English square miles, with a population of 8,266,908. The coast line extends approximately over 2,000 miles, and geographically Siam lies between 5° 40' and 20° 20' N. latitude, and between 97° 5' and 105° 0' E. longitude. The greatest distance east to west is estimated at about 510 miles, and that from north to south 1,005 miles.

CONTROL.

Radiotelegraphy is organised in Siam under supervision of the Minister of Marine, but it is now controlled by the Ministry of Communications in so far as the public is concerned. The first stations erected were those at Saladeng in Bangkok (lat. 13° 44' 32.49" N., long. 100° 29' 22.30" E.), and at *Songkhla (lat. 7° 10' 0" N., long. 100° 36' 12" E.); both these land stations are directly controlled by Government.

* Sometimes spelt "Singora."

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Eng. Capt. Phravidyu Duralikhit ..	Head and Chief Engineer of Radiotelegraphic Department	Wireless Station, Bangkok
Eng. Lieut.-Commander Luang Jamnarn Aggikich	Assistant Engineer	Wireless Station, Bangkok
Sub. Lieut. Kanchana Yosadhara	Station Master	Bangkok
Eng. Junior Lieut. Chvam Kalantanandha	Operating Instructor	Bangkok
Sub. Lieut. Cherm Chatiketa	Principal Assistant	Bangkok
Lieut. Hatha Yuvanakara	Station Master	Songkhla
Sub. Lieut. Prasidhi Yangprida	Principal Assistant	Songkhla
Junior Lieut. Man Promphisuthi	Station Engineer	Songkhla

ORGANISATION.

There are experimental, amateur, and instructional stations at Saladeng. There are also ship stations on Government vessels.

ADMINISTRATION.

The law and regulations under which radiotelegraphy is administered in Siam will be found below.

A—Radiotelegraph Act, B. E. 2457 (1914).

B—Notice concerning the opening of Radiotelegraphy for Public Service, B. E. 2462 (1919).

C—Ministerial Regulations relating to the use of Radiotelegraphy, B. E. 2462 (1919).

D—Radiotelegraph Amendment Act August 4th, 1921.

RADIOTELEGRAPH LAW.

A This Law may be cited as "The Radiotelegraph Law, B.E. 2457" (1914).

2. It shall come into force from the date of its publication in the Government Gazette.

COAST AND LAND STATIONS.

3. The right to establish and work radio-stations for telegraphic and telephonic purposes on Siamese soil and on board ships permanently anchored in Siamese territorial waters is an exclusive privilege of the Government.

This privilege shall be reserved to the Department of Posts and Telegraphs in the Ministry of Communications.

4. The Army and Navy may establish and work independently radiotelegraph stations or field apparatus subject to such conditions as may be from time to time sanctioned in writing by the Minister of War or Marine.

Any station established under this section may be opened to public correspondence only under special arrangement with the Department of Posts and Telegraphs.

SHIP STATIONS.

5. No merchant ship under the Siamese flag shall establish or work any radiotelegraph or telephone apparatus without a license from the Minister of Communications.

The Minister of Communications shall not grant such license until he has been satisfied that the apparatus can work in accordance with the provisions of the International Radiotelegraph Convention of London, 5th July, 1912, and will be handled by qualified operators.

Such license shall be for such time and subject to such conditions as the Minister of Communications may deem good.

6. No ship, whether under the Siamese or a foreign flag, excepting ships of war, is allowed while in Siamese territorial waters to send a

message by means of her radiotelegraph apparatus when and where such message can be forwarded by the Government system, either with or without wires, except for the purpose of transmitting messages to or from a ship in distress.

SECRECY.

7. No person or persons engaged in or having knowledge of the operation of any radio-station shall disclose the contents of any message transmitted or received by such station for the purpose of transmission, except to the person to whom the same may be directed or his authorised agent, or to another station employed to forward such message to its destination, or in obedience to the directions of a Court of competent jurisdiction.

PENALTIES.

8. Whoever establishes or works any apparatus contrary to the provision of Sections 3 and 6, or in excess of the conditions laid down under Section 4 of this Law, shall be punished with imprisonment not exceeding six months or fine not exceeding five hundred ticals or both.

The captain or master of a ship, and the person directly responsible for the offence, if any, shall both be liable to punishment for every infringement of the provisions of Section 6.

9. Any person infringing Section 5 of this law shall be punished with fine not exceeding one hundred ticals.

10. Upon the conviction of any person of an offence under the foregoing sections, the Court may order the forfeiture of any apparatus used for the commission of such offence.

11. Any person injuring apparatus or committing any act of mischief to a radiotelegraph station lawfully established, or doing anything to prevent or intended to prevent the transmission or delivery of any radiotelegraph message by any such station, shall be guilty of an offence under Section 196 of the Penal Code.

12. Whoever commits any offence against Section 7 of this Law shall be punished under Section 279 to 281 of the Penal Code.

EXECUTION.

13. The Minister of Communications shall have charge and control of the execution of this Law.

It shall be lawful for him to frame regulations and to fix the scale of fees for land, coast, and ship charges in the transmission of messages by radiotelegraphy or telephony, as well as for licences under Section 5.

It shall also be lawful for him to frame regulations about the qualifications required from operators.

All such regulations shall be in accordance with the detailed Service Regulations appended to the International Radiotelegraph Convention.

Such regulations, on being sanctioned by His Majesty and published in the Government Gazette, shall be deemed to be part of this Law.

Given on the 24th day of April, B.E., 2457 (1914), being the 1,261st day of the Present Reign.

BY THE KING'S MOST EXCELLENT MAJESTY.

Whereas His Majesty's Government has always reserved to itself the exclusive right to establish and work means of telegraphic and telephonic communications throughout Siam;

And whereas apparatus for wireless telegraphy has now been devised practicable for use by land and sea;

And whereas it is desirable that ships under the Siamese flag, more specially passenger carriers, should be equipped with such apparatus, worked under proper regulations, for the greater safety of life at sea;

And whereas the regulations necessary to insure the proper and efficient working of wireless telegraphic stations must conform in all respects with the provisions of the International Radiotelegraph Convention of London, 1912, to which His Majesty's Government has been a party;

Therefore His Majesty has been pleased to enact the following law:—

NOTICE CONCERNING THE OPENING OF RADIO-TELEGRAPHY FOR PUBLIC SERVICE.

Dated 22nd May, 1919.

B In view of the progress made in commerce and trade in this country, it is considered that the use of Radiotelegraphy which was originally established by the Royal Government for its own use should be extended to general public.

The Ministry of Communications having submitted these facts before His Majesty the King, has now obtained the Royal Permission that the Naval Radiotelegraphic stations in Bangkok and at Singora (Songkhla) should be open to public use from the 1st June, 1919.

The public radiotelegraphic service will be under the management of the telegraph officials of the Post and Telegraph Department, who will receive and despatch radiotelegraphic telegrams in a similar manner to the despatch of other telegrams in the Kingdom.

Senders of radiotelegraphic messages should write clearly the words "Wireless Telegraph" on the upper left-hand corner of the form supplied, before the names of the persons for whom the messages are destined.

(Sd.) 1st Grand Councillor,

Chaò Phya Wongsa Nuprabadh,
Minister of Communications.

MINISTERIAL REGULATIONS FOR THE LICENSING OF RADIO-TELEGRAPHY UPON SHIPS, THE ISSUING OF CERTIFICATES OF COMPETENCY TO RADIO-TELEGRAPH OPERATORS, THE FIXING OF FEES FOR SUCH LICENSES AND CERTIFICATES AND THE FIXING OF FEES FOR LAND, COAST AND SHIP CHARGES IN THE TRANSMISSION OF MESSAGES BY RADIO-TELEGRAPHY.

C Whereas under Sections 5 and 13 of the Radiotelegraph Law, B. E. 2457, the Minister of Communications is empowered to license the establishment and working of radiotelegraph apparatus upon merchant ships under the Siamese flag, to frame regulations about qualifications required from operators and to fix the scale of fees for land, coast and ship charges in the transmission of messages by radiotelegraphy, such Regulations, on being approved by His Majesty and published in the Government Gazette to be deemed to be part of the Law.

It has now pleased His Majesty the King to authorise the Minister of Communications to issue the following Ministerial Regulations:—

1. The operation of radiotelegraph stations upon any merchant ship under the Siamese flag must conform to the provisions of the International Radiotelegraph Convention of London, July 5th, 1912, the detailed Service Regulations appended to the said International Radiotelegraph Convention, the Radiotelegraph Law, B. E. 2457 and any amendments and alterations which may be made therein, and the regulations from time to time issued by the Minister of Communications under the authority of said Radiotelegraph Law, B. E. 2457.

2. No person shall work the radiotelegraph upon any merchant ship within Siamese territorial waters in such a way as to interrupt or interfere with

(a) Naval or military signalling.

(b) The transmission of messages between other radiotelegraph stations lawfully established.

3. Before the installation of any radiotelegraph apparatus upon any merchant vessel under the Siamese flag, an application shall first be filed with the Minister of Communications, according to Form A of Schedule I, attached hereto. If the Minister of Communications is satisfied that the apparatus described in said application, will, when installed, be capable of working in accordance with the requirements of Section 4 (a) of these Regulations, an installation licence will be issued according to Form B. of said Schedule I. When the installation is completed, the applicant shall notify the Minister of Communications, who, thereupon, will cause an inspection to be made. If this inspection is satisfactory, the Minister of Communications will issue a ship license according to Form C, and subject to the conditions therein contained. Such ship license shall be good until March 31st after its date, but may be renewed within one month immediately after the expiration of the period for which it was issued. Such installation licenses and ship licenses shall be executed in duplicate, one copy to be retained by the Ministry of Communications and the other given to the licensee.

4. The Minister of Communications shall not grant such ship license unless he is satisfied that—

(a) the radiotelegraph apparatus can be worked in accordance with the provisions of the International Radiotelegraph Convention of London and the detailed Service Regulations appended thereto, and that,

SCHEDULE I.

Conditions and Forms of application for License to install Radiotelegraph Apparatus on ships, Installation License, and Ship License.

I.

Application for installation licenses shall be made according to the following form:—

FORM A.

I, of the owner of the ship,
do hereby make application for permission to install upon said ship apparatus for radiotelegraphy according to the following specification:—

SPECIFICATION.

Name of Ship.	Normal range of Signalling in Nautical Miles		Character of Apparatus		Power		If Alternator is used, Number of Cycles per second
	by day	by night	Description of Receiving Apparatus	Wave-length in Metres	Source and Maximum Output	Maximum taken by Transmitting Instruments. Current Voltage	
1	2	3	4	5	6	7 8	9

The above described apparatus will be installed in months.

Signed

II.

License for installation of Radiotelegraph Apparatus upon ships shall be according to the following form:—

FORM B.

License for installing Radiotelegraph Apparatus.

Whereas of has filed with the Ministry of Communications his application dated for the installation of radiotelegraph apparatus upon the ship

Now the Minister of Communications does hereby license and permit the installation upon the said ship within the period of months from date of radiotelegraph application in accordance with the following specification:

Name of Ship.	Normal range of Signalling in Nautical Miles.		Character of Apparatus		Power		If Alternator is used, Number of Cycles per second
	by day	by night	Description of Receiving Apparatus	Wave-length in Metres	Source and Maximum Output	Maximum taken by transmitting Instruments. Current Voltage	
1	2	3	4	5	6	7 8	9

This license and permission does not permit the licensee to operate said apparatus above described until after its inspection when installed and the issuance of a ship license.

Signed
Minister of Communications.

(b) operators qualified in accordance with the provisions of these Regulations and who are the holders of the certificates provided for herein will be employed to work the same.

5. A separate license is required for each ship belonging to the same owner.

6. The fee for the issuance of each ship license shall be 5 Bahts and a fee of the same amount shall be charged for each renewal thereof.

7. No person shall work a radiotelegraph on board any merchant ship under the Siamese Flag unless he holds either a first or second-class certificate of competency granted by the Minister of Communications.

8. The Minister of Communications shall grant certificates of competency in accordance

with the conditions contained in the second Schedule to these Regulations.

9. Should a holder of a certificate of competency granted under these rules be proved to the satisfaction of the Minister of Communications wilfully or negligently to have failed to comply with the provisions of the International Radiotelegraph Convention of London, July 5th, 1912, the detailed Service Regulations appended thereto, the Radiotelegraph Law, B. E. 2457 or the Regulations issued by the Minister of Communications, or any amendments or modifications of any of these or any other Regulations which may be issued from time to time for his guidance, the Minister of Communications may cancel the certificate.

10. The Minister of Communications or any officer authorised by him may require the holder of a certificate of competency to produce the same for cancellation under Regulation 9, and the holder must comply with such requisition.

11. Nothing in these Regulations shall apply to the use of the radiotelegraph for the purpose of making or answering signals of distress.

12. Rates for messages transmitted to or received from ship stations, shall be as follows :—
Coast station transmitting or receiving charge for radiotelegrams to or from ships, 20 satangs (0.40 francs) per word with a minimum charge of 2 Bahts (4.00 francs).

Land charges for the receipt or transmission of radiotelegrams over the Inland Telegraph System shall be those provided in the published tariff for inland messages. Land charges shall in addition include the actual expenses of postage or carriage, if the message is to be delivered outside of established telegraph districts.

Charges for relaying messages outside of Siam shall be fixed in accordance with published international tariffs.

These rates may be modified or supplemented and rates fixed for the charges at ship stations by the Minister of Communications.

III.

The ship license provided for in Regulation 3, shall be in the following form and subject to the following conditions :—

FORM C.

Know all men by these presents that, whereas.....of.....hereafter called the "licensee," is desirous of establishing, maintaining and working on the ship..... belonging to the licensee, radiotelegraphy under Section 5 of the Radiotelegraph Act, B. E. 2457 ;

And whereas the licensee has agreed and by the acceptance of this license, does become bound to operate and maintain the radiotelegraph installation for which this license is granted in accordance with the International Radiotelegraph Convention of London of July 5th, 1912, the detailed Service Regulations appended thereto, the Radiotelegraph Law, B. E. 2457, and the Regulations thereunder by the Minister of Communications, and any and all amendments and modifications of any of these, which may be made from time to time ;

Now the Minister of Communications hereby grants to the licensee during the term or period commencing with the date hereof and terminating on the 31st day of March, B. E. 24....(19), license and permission ;

(1) To establish, maintain and work for the purpose hereinafter mentioned upon the ship..... but subject in all respects to the provisions of said International Radiotelegraph Convention of London, July 5th, 1912, to the Service Regulations appended thereto, the Radiotelegraph Law of B. E. 2457, and the Regulations issued by the Minister of Communications, and all amendments and modifications of any of these, apparatus for radiotelegraphy known as the.....system of radiotelegraphy.

(2) To transmit and receive messages by means of the licensed apparatus between the said ship and coast stations and other ship stations ;

(3) To receive money or other valuable consideration for or in respect to the use of the licensed apparatus or for or in respect of the transmission or receipt of messages by means of the said apparatus, according to the schedule of charges fixed in the Regulations or by the Minister of Communications.

And it is hereby declared that the said license and permission is granted upon and subject to the following further conditions and provisions :—

(1) The licensed apparatus shall not be used by the licensee or by any other person either on behalf of or by permission of the licensee for the transmission or receipt of any messages except those authorised by this license.

(2) (a) The licensee shall not by the transmission of any message by means of the licensed apparatus or otherwise by the use of the licensed apparatus interfere with Naval or Military signalling or with any radiotelegraph station lawfully established..

(b) If at any time it becomes apparent that the working of the licensed apparatus upon said ship is inconsistent with the free use of naval or military signalling the licensee shall when required so to do by the Minister of Communications close said station upon said ship.

(3) The licensee shall comply with all such directions and observe all such rules and regulations as may be given or made by the Minister of Communications from time to time for the purpose of preventing interference with the working of any other radiotelegraph station and for enabling the messages exchanged by means of the licensed apparatus, to be distinguished from those emanating from any other radiotelegraph station.

(4) The licensee shall at all times indemnify His Majesty's Government, the Minister of Communications and the Department of Posts and Telegraphs against all actions, claims and demands which may be brought or made by any corporation, company or person in respect of any damage arising from any act licensed or permitted by these presents.

(5) Subject to the provisions of this license, the licensee shall transmit messages by means of the licensed apparatus on equal terms without favour or precedence whether as regards rates of charge, order of transmission or otherwise, except that preference shall be given to messages transmitted on behalf of His Majesty or of His Majesty's Government.

(6) The licensee shall so far as possible receive from ships and light stations all requests for assistance and all signals of distress and shall answer such requests and signals and retransmit them with the least possible delay to the proper authorities by means of the licensed apparatus, or any other means in the power of the licensee.

(7) The licensed apparatus shall be worked only by a person holding a certificate of competency issued by the Minister of Communications.

(8) The licensee shall not divulge to any person other than properly authorised officials of His Majesty's Government or make any use whatever of any message coming to the knowledge of the licensee through naval or military signalling.

(9) The licensee shall keep such accounts records and registers of all messages transmitted by means of the licensed apparatus as the Minister of Communications may from time to time require and such accounts, records and registers shall be open to the inspections of the Minister of Communications or his duly authorised representative at all reasonable times.

(10) The Minister of Communications or his duly authorised representative may at all reasonable times enter upon said ship for the purpose of inspecting and may inspect any appa-

ratus fixed or being in such ship for the purpose of sending and receiving messages by radiotelegraphy, and the method of working such apparatus.

(11) The Minister of Communications may at any time by notice in writing but without assigning any reason revoke and determine this license and thereupon this license shall determine and become absolutely void.

(12) Any notice, request or consent (whether required to be in writing or not) to be given by or on behalf of His Majesty's Government or by the Minister of Communications or the Director-General of the Post and Telegraph Department, may be served by sending the same in a letter addressed to the licensee at the office for the time being of the licensee, or by delivery to the master of the ship upon which the licensed apparatus is installed and any notice to be given by the licensee under these presents may be served by sending the same in registered letter addressed to the Minister of Communications.

Signed and delivered by.....

Minister of Communications.

SCHEDULE II.

CONDITIONS AND FORMS FOR THE GRANTING OF CERTIFICATES OF COMPETENCY.

(1) Certificates of competency as to radiotelegraph operators on board merchant ships under the Siamese Flag, shall be granted by the Minister of Communications, subject to an examination and shall be in accordance with Form B, appended hereto. Such certificates shall indicate the system or systems of radiotelegraphy in which the examination was conducted, and shall certify that the holder:

(a) In the case of first-class certificates is able to send and receive, by sound, messages in plain language in the International Morse Code at a rate of not less than 20 words per minute (five letters being counted as one word); or

(b) In the case of second-class certificates is able to send and receive by sound, messages in plain language in the International Morse Code at a rate of from 12 to 19 words per minute (five letters being counted as one word); and

(c) Is able to adjust the apparatus ordinarily used in some well-known system of radiotelegraphy so as to suit the varying conditions of working without using excessive transmitting power; and

(d) Has an efficient working knowledge of the regulations applicable to the exchange of the radiotelegraphic traffic.

(2) Candidates for examination shall fill up an application according to Form A attached hereto, and submit the same to the Minister of Communications at Bangkok.

(3) Upon being notified that he has successfully passed the examination each candidate shall supply two photographs of himself, one of which will be attached to the certificate of competency, and the other to the duplicate of the certificate which is retained by the Minister of Communications. These photographs will be signed by the candidates and stamped by the issuing officers in such a way as to prevent substitution.

(4) A fee of 10 Bahts will be charged for each examination and an additional fee of 10 Bahts for the certificate issued to a successful applicant.

(5) Each certificate shall be good for five years and may be renewed at the expiration of that period for a like period of five years. Such renewal may be without re-examination if

the applicant has been engaged in the actual transmission and receipt of radiotelegrams during at least three of the preceding five years. Otherwise an examination will be required. The fees for renewal examinations and the issuance of renewal certificates are the same as for the original examination and issuance.

(6) If the candidate satisfactorily passes the examination, he shall make a declaration that he will observe the secrecy of radiotelegrams which come to his knowledge in the course of duty.

FORM A.

Application for examination for a..... class certificate of competency as a radiotelegrapher.

1. Name
2. Residence
3. Date and Place of Birth.....
4. Nationality
5. System of radiotelegraph in which applicant wishes to be examined

The undersigned applicant for examination for a certificate of competency as a radiotelegrapher agrees that, if successful, he will observe all requirements, so far as they may apply to him, of the International Radio-Convention of London, July 5th, 1912, the detailed Service Regulations appended thereto, the Radiotelegraph Law, B. E. 2457, the Regulations used in pursuance thereof, and all amendments and modifications of any of these, which may be issued from time to time.

(Signature).....

FORM B.

....CLASS CERTIFICATE OF COMPETENCY.

Whereas,.....having been examined as to his competency as a radiotelegrapher, according to the Regulations in such case made and provided and said examination having been successfully passed.

It is hereby certified that.....is able to send and receive by sound messages in plain language in the International Morse Code at the rate of.....words per minute (five letters being counted as one word) and is able to adjust the apparatus ordinarily used in the.....system of radiotelegraphy so as to suit varying conditions of working, without using excessive transmitting power and has an efficient working knowledge of the regulations applicable to the exchange of radiotelegraphic traffic.

Accordingly this.....class certificate of competency has been issued to the said.....who by accepting it agrees to be bound, so far as they may apply to him, by all provisions of the International Radiotelegraphic Convention of London, July 5th, 1912, the detailed Service Regulations appended thereto, the Radiotelegraph Law B. E. 2457, and the Regulations issued under the authority thereof, and any amendments and modifications of any of these which may be issued from time to time.

Signed and delivered by.....
Minister of Communications.

THE RADIOTELEGRAPH AMENDMENT ACT.

BY THE KING'S MOST EXCELLENT MAJESTY.

Whereas the authority conferred upon the Minister of Communications by virtue of Article 13 of the Radiotelegraph Act B.E. 2457 is not sufficient to execute and control the Radiotelegraph service.

Therefore His Majesty has been pleased to further amend the Radiotelegraph Act B.E. 2457 as follows:—

(1) This Act shall be called the Radiotelegraph Amendment Act 2464.

(2) It shall come into force from the 4th day of August, 1921.

(3) In Chapter VI Article 13 after paragraph 3 of the Radiotelegraph Act B.E. 2457, the following paragraph shall be inserted, namely:

It shall also be lawful for him, whenever he deems expedient, to issue notifications granting temporary permission to ships to send and receive messages by means of their wireless apparatus while in Siamese territorial waters. Given on the 4th day of August, 1921, being the twelfth year of the Present Reign.

SIERRA LEONE

(See also Map Section)

SIERRA LEONE proper consists of a peninsula about 26 miles long and 12 miles broad covering an area of about 300 square miles. The Colony, however, is much more extensive, stretching from French Guinea on the north to the Republic of Liberia on the east and south-east, its total area being 4,000 square miles, with a population of 75,572.

The capital is Freetown, and the colonial administration is conducted by a Governor and Commander-in-Chief, assisted by Executive and Legislative Councils. The same officials also administer the "Protectorate," a term which applies to the territories, not being portions of the Colony of Sierra Leone, lying between 6° and 10° north latitude and 10° and 14° of west longitude.

CONTROL.

A wireless telegraphy station is installed at Freetown, and is owned and controlled by the African Direct Telegraph Company. Mr. A. H. Stilwell is the Superintendent in charge.

The regulation of wireless telegraphy rests solely in the hands of the Government. There are no wireless clubs or societies.

ADMINISTRATION.

The Sierra Leone wireless laws and regulations were first formulated in the Decree of 1903, and the Schedule founded thereon. In 1912 this Decree and the regulations in the Schedule were amended by Ordinance No. 19 with the Schedule which was thereto attached. In the following year (1913) these were in their turn replaced by Ordinance No. 11 with its accompanying Schedule, both of which we print below. A set of Regulations issued on July 16th, 1917, has been superseded by an additional set issued on May 12th, 1919, which will be found below.

The list of reprints included here covers:—

A—Ordinance No. 11 of 1913.

B—Schedule dated May 23rd, 1913.

C—Regulation No. 1 of 1919.

AN ORDINANCE TO PROVIDE FOR THE REGULATION OF WIRELESS TELEGRAPHY.

No. 11 of 1913.

Be it enacted by the Governor of the Colony of Sierra Leone, with the advice and consent of the Legislative Council thereof as follows:—

1. *Short Title.*—This Ordinance may be cited as the Wireless Telegraphy Ordinance, 1913.

2. *Definition of "Wireless Telegraphy."*—In this Ordinance, "Wireless Telegraphy" means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent or received: Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. *License for Wireless Telegraphy.*—(1) A person shall not establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place or on board any ship registered in the Colony, except under and in accordance with a license granted in that behalf by the Governor.

(2) Every such license shall be in such form and for such period as the Governor may determine, and shall contain the terms, conditions and restrictions on and subject to which it is granted.

4. *Apparatus aboard ships to be worked in accordance with regulations.*—A person shall not work any apparatus for wireless telegraphy installed on any merchant ship, whether British or foreign, while that ship is in the territorial waters of the Colony, otherwise than in accordance with regulations under this Ordinance.

5. *Regulations.*—(1) The Governor may from time to time make regulations for carrying into effect the purposes of this Ordinance.

(2) *Schedule.*—The regulations in the Schedule to this Ordinance shall have effect except in so far as they may be amended or rescinded by regulations made under the authority of this section.

(3) If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters of the Colony shall be subject to such further regulations as may be made by the Governor from time to time, and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

6. *Search Warrant.*—If a Magistrate is satisfied by information on oath that there is reasonable ground for suspecting that a wireless telegraph station has been established without a license in that behalf or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any merchant ship without a license in that behalf or contrary to the provisions of any regulations made under this Ordinance or of any license granted under this Ordinance, he may grant a search warrant to any superior Officer of Police named in the warrant, and a warrant so granted shall authorise the Officer to enter and inspect the station, place, or ship, and to seize any apparatus which appears to be used or intended to be used for wireless telegraphy therein.

7. *Penalties.*—Any person who shall offend against any provision of this Ordinance or any of the regulations made thereunder shall be liable on summary conviction for every such offence to a fine not exceeding fifty pounds, and upon such conviction the Court may order that any apparatus for wireless telegraphy in connection with which the offence was committed shall be seized and forfeited.

8. *Repeal* No. 22 of 1903, No. 19 of 1912.—The Wireless Telegraphy Ordinance, 1903, and the Wireless Telegraphy Amendment Ordinance 1912, are hereby repealed.

SCHEDULE—SECTION 5 (2). REGULATIONS.

B 1. All apparatus for Wireless Telegraphy on board a merchant ship in the territorial waters of the Colony shall be worked in such a way as not to interfere with

(a) Naval signalling, or

(b) The working of any wireless telegraph station lawfully established, installed or worked in the Colony or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. In these Regulations, "Naval signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Naval Stations or between a ship of His Majesty's Navy or a Naval Station and any other wireless telegraph station whether on shore or on any ship.

3. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour or bay of the Colony except with the special or general permission of the Governor.

4. For the purpose of any proceedings under these regulations the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

5. Any summons or other document in any proceedings under these regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

6. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

Passed in the Legislative Council this twenty-third day of May in the year of our Lord, one thousand nine hundred and thirteen.

REGULATIONS (No. 1 OF 1919) MADE UNDER SUB-SECTION (1) OF SECTION 5 OF THE WIRELESS TELEGRAPHY ORDINANCE, 1913 (No. 11 OF 1913).

C Whereas by sub-section (1) of section 5 of the Wireless Telegraphy Ordinance, 1913 (No. 11 of 1913), it is provided that the Governor may from time to time make regulations for carrying into effect the purposes of the Ordinance:

And whereas by sub-section (2) of section 5 it is provided that the regulations made and passed by the Legislative Council, 23rd day of May, 1913, shall have effect except in so far as they shall be amended or rescinded by regulations made under the authority of the section:

And whereas by regulations made the 16th day of July, 1917, certain of the above recited regulations were rescinded and other regulations were substituted therefor:

And whereas I am minded to make other provision in lieu of the last above recited regulations:

Now, therefore, under and by virtue of the power and authority in that behalf vested in me it is ordered that the regulations made the 16th day of July, 1917, are hereby rescinded and the following substituted therefor:—

1. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour or bay of the Colony except with the special or general permission of the Governor.

2. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

Made this 12th day of May, 1919.

SOLOMON ISLANDS

(See under NEW GUINEA.)

SOUTH AFRICA (UNION OF)

((See also Map Section)

Including: Provinces of Natal, Zululand, Transvaal, Orange Free State and South-West Africa.

THE Union of South Africa lies between 22° and $34^{\circ} 50'$ S. latitude and $16^{\circ} 30'$ and $32^{\circ} 40'$ E. longitude. Its total superficial area, not including the Protectorates of Bechuanaland, Basutoland, and Swaziland, which are included within the same geographical boundaries, but do not form part of the Union, is 473,089 square miles. At the last census the population was 6,922,813. The Union was constituted on May 31st, 1910, under the South Africa Act of 1909, and embraces the former separate self-governing colonies of the Cape of Good Hope, the Transvaal, the Orange Free State, and Natal.

The Executive Government is vested in a Governor-General appointed by the Crown, aided by an Executive Council of Union Ministers, with two Houses of Legislature.

CONTROL.

The administration of radiotelegraphy is in the hands of the Postmaster-General and is not treated as a separate unit.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Major E. A. Sturman, C.B.E.	Postmaster-General	Pretoria
Lt.-Col. N. Harrison, C.M.G., D.S.O., M.I.E.E.	Secretary to the General Post Office	Pretoria.

ORGANISATION.

There are three wireless stations in South Africa, under the control of the Union Government. The first was established at Durban in June, 1910, another at Slangkop, near Cape Town, in May, 1911, and a third at Port Elizabeth, in April, 1921. In September, 1913, it became necessary in connection with the port defences to remove the Durban station from the position where it had been originally erected to a point some four miles distant. The change of situation has not adversely affected its efficiency.

There are no privately owned stations, but licenses are issued for private wireless telegraph stations.

The latest available statistics are as follows:—

Land stations for public service to ships	..	3
Ship stations on privately owned vessels	..	6
Ship stations on railway owned vessels	..	2

ADMINISTRATION.

The only statutory regulation on radiotelegraphy within the Union is that contained in the preamble to the Post Office Act, and Section 80 *ibid.*, both of which will be found below.

An agreement has been entered into between the Government and the Marconi Company for the erection, under license, of a powerful radio station capable of communicating with England. The terms of the license are for either the taking over by the Government or the renewal of the license every ten years.

The Station when completed will be about twice as powerful as that of Saint Assise near Paris.

There is no Union Act compelling ships trading in South African waters to be fitted with radiotelegraphic apparatus.

A—Statutory Regulation (Preamble to P.O. Act, 1911).

B—Section 80 of Post Office Act, 1911.

C—License to establish and work a Private Wireless Telegraph Station.

POST OFFICE ADMINISTRATION AND SHIPPING COMBINATION DISCOURAGEMENT ACT, 1911.

CHAPTER V.—SECTION I.

A In this Act, unless inconsistent with the context, "telegraph" shall include "telephone," and shall mean any system or means of conveying signs, signals, sounds, or communications, by the agency of electricity, magnetism, electro-magnetism, or by any agency of a like nature, whether with or without the aid of wires, and shall include the system commonly known as wireless telegraphy, or aetheric signalling, and any improvements or developments of that system.

"Telegraph line" shall include any apparatus, instrument, pole, mast, standard, wire, pipe, tunnel, pneumatic or other tube, thing, or means whatever, which is or may be used in connection with or for the purpose of sending, transmitting, conveying, or receiving telegraphic signs, signals, sounds, or communications.

1. The Postmaster-General shall have the exclusive privilege of constructing and maintaining telegraph lines and of transmitting telegrams or other communications by telegraph within the Union or the territorial waters thereof and of performing all the incidental services of receiving, collecting, or delivering telegrams or other such communications: Provided that—

(a) The owners of any system of railways may maintain and work for the purposes of any such railway, for the time and to the extent authorised by any law, any telegraph lines constructed in pursuance of rights conferred by that law; and

(b) The Postmaster-General may construct, maintain, or lease telegraph lines for private use or may, by license, authorise any person to construct, maintain, and work private telegraph lines within the Union or its territorial waters and may prescribe the fees and conditions therefor.

POST OFFICE ADMINISTRATION ACT, 1911.

B 80. (1) The Postmaster-General shall have the exclusive privilege of constructing and maintaining telegraph lines and of transmitting telegrams or other communications by telegraph within the Union or the territorial waters thereof and of performing all the incidental services of receiving, collecting, or delivering telegrams or other such communications: Provided that—

(a) The owners of any system of railways may maintain and work for the purpose of any such railway, for the time and to the extent authorised by any law, any telegraph lines constructed in pursuance of rights conferred by that law; and

(b) The Postmaster-General may construct, maintain or lease telegraph lines for private use or may, by license, authorise any person to construct, maintain, and work private telegraph lines within the Union or its territorial waters and may prescribe the fees and conditions therefor.

(2) No telegraph line shall be used for the purpose of transmitting or delivering telegrams for the public except by the authority of the Postmaster-General and upon such terms and conditions as he may prescribe, and the department shall have the right, by means of its officers, of inspecting all offices which are authorised to accept, transmit, or deliver public telegrams.

UNION OF SOUTH AFRICA.

DEPARTMENT OF POSTS AND TELEGRAPHS.

License to Establish and Work a Private Wireless Telegraph Station.

C Under the provisions of section 80 of the Post Office and Shipping Combinations Discouragement Act, 1911, a license is hereby issued to establish and work apparatus for wireless telegraphy at provided such apparatus shall be of the character specified in the schedule hereto.

The licensed apparatus shall at all times be under the control of the licensee and no other person shall be allowed to transmit signals by means of the licensed apparatus.

No signals shall be transmitted other than such as are necessary to test the licensed apparatus or to aid research in wireless telegraphy by the licensee.

The licensee shall so work the licensed apparatus as not to interfere with the working of any wireless telegraph station established within the Union or the territorial waters thereof.

The licensee shall comply with all directions which shall be given to the licensee by the Postmaster-General of the Union of South Africa and shall at any time cease to work or shall completely dismantle the licensed apparatus upon notice so to do in writing from the Postmaster-General.

The licensed apparatus shall not without the consent in writing of the Postmaster-General be altered or modified in respect of any of the particulars mentioned in the schedule hereto.

The licensee shall at all times indemnify the Postmaster-General against all actions, claims, and demands which may be brought or made by any corporation, company, or person in respect of any injury arising from any act licensed or permitted by these presents.

The licensee shall not divulge to any person (other than properly authorised officials of the Government of the Union of South Africa or a competent legal tribunal) or make any use whatever of any message coming to the knowledge of the licensee and not intended for receipt by means of the licensed apparatus.

The Postmaster-General and any agent authorised in that behalf in writing by him may at all reasonable times enter upon the premises in the possession or occupation of the licensee either solely or jointly with any other person or persons for the purpose of inspecting and may inspect any telegraphic instruments and apparatus fixed or being in such places and the working and user of such apparatus and telegraphic instruments respectively.

All apparatus used by the licensee shall be so placed and used as not to interfere with the efficient or convenient maintenance, working or use of any telegraph line of the Postmaster-General which may from time to time exist.

In case any telegraphic line of the Postmaster-General shall be damaged or the efficient working or user thereof shall be interfered with and the Engineer-in-Chief for the time being of the Department of Posts and Telegraphs shall certify in writing under his hand that such damage or interference has been caused by any apparatus used by the licensee or by anything done by or on behalf of the licensee in relation thereto the licensee shall on demand pay to the Postmaster-General all costs that shall be reasonably incurred by him in repairing such damage and in removing or altering such telegraphic line so as to restore the same to efficient working order and in adding thereto or substituting therefore either temporarily or permanently any other telegraphic line if the said Engineer-in-Chief shall certify that such addition or substitution is reasonably required.

For the purpose of this license the expression "telegraph line" has the same meaning as in the Post Office Administration and Shipping Combinations Discouragement Act of 1911.

Except with the consent in writing of the Postmaster-General the licensee shall not assign, underlet, or otherwise dispose of or admit any other person or body to participate in the benefit of all or any of the licenses, powers, or authorities hereby granted.

If and whenever an emergency shall have arisen in which it is expedient for the public service that the Government of the Union of South Africa shall have control over the transmission of messages by the licensed apparatus it shall be lawful for the Postmaster-General or the Secretary for Defence by warrant under his hand to direct and cause the licensed apparatus or any part thereof to be taken possession of in the name and on behalf of His Majesty and to be used for His Majesty's service and in that event any person authorised by the said Postmaster-General or Secretary for Defence may enter upon the premises of the licensee and take possession thereof and use the same as aforesaid.

The Postmaster-General may at any time at his absolute discretion give notice in writing to determine this license hereby given at the end of one calendar month from the date of such notice and at the expiration of that period the license or permission hereby granted shall

cease and determine accordingly but without prejudice to any right of action or remedy which shall have accrued or shall thereafter accrue to the Postmaster-General under any condition or provision herein contained.

Nothing herein contained shall be deemed to authorise the licensee to exercise any of the powers or authorities conferred on or acquired by the Postmaster-General.

Any notice (whether expressed to be in writing or not) to be given by the Postmaster-General under these presents may be under the hand of the Secretary or any one of the Assistant Secretaries for the time being of the Department of Posts and Telegraphs, and may be served by sending the same in a registered letter addressed to the licensee at the usual or the last known residence or business of the licensee, and any notice to be given by the licensee under these presents may be served by sending the same in a registered letter addressed to the Secretary of the Post Office at the General Post Office, Pretoria.

The licensee shall pay to the Postmaster-General in respect of this license hereby granted a fee of ten shillings.

J. W. BUXTON FORMAN,
Postmaster-General.

- (a) 100 feet for single wire aerial.
- (b) 140 feet wire where two or more wires are used, e.g., total length of 70 feet of double wire.

Signals to be exchanged with _____

SPAIN

(See also Map Section)

Including • Canary Islands, Fernando Po.

THE present Constitution of Spain after having been drawn up by the Government and laid before a *Cortes Constituyente* elected for its ratification, on March 27th, 1876, was proclaimed on June 30th of that year. It enacts that Spain shall be a Constitutional Monarchy, the Executive vested in the King, and the power to make laws "in the Cortes with the King." The reigning monarch, Alphonso XIII, belongs to the House of Bourbon, which succeeded to the Spanish throne at the end of the seventeenth century. He married Princess Victoria Eugenie, granddaughter of the late Queen Victoria, on May 31st, 1906.

The territory included under the Spanish administration comprises 49 provinces, 47 in the Iberian peninsula and 2 provinces, namely, Canary and Balearic Islands, and as colonies, Fernando Po Island, the Muni coast and Rio de Oro, and Ceuta and Melilla, in Morocco.

The superficial area of the 47 provinces in the Peninsula and the Balearic Islands is 191,985 square miles, and the population 20,783,844.

CONTROL.

Radiotelegraphy in Spain is a State monopoly, under the control of the Home Office and the Ministry of War and the Navy. The establishment of a wireless public service was granted on June 26th, 1908, to "La Sociedad Española Oerlikon," which was responsible for the erection of 24 land stations having three different ranges. The "Sociedad Española Oerlikon" then formed a company "Compañía Concesionaria del servicio público español de Telegrafía sin hilos," which erected the Cadiz, Tenerife, and Las Palmas stations, but did not complete them. The time granted in the contract having elapsed, the concession was then transferred to the actual holders of it, "La Compañía Nacional de Telegrafía sin Hilos," which was formed with the aid, and under the direction of Marconi's Wireless Telegraph Company, Limited, and at the suggestion of the latter, the original plan was altered and reduced to 10 stations, all of greater range.

Licenses for erecting and working wireless stations by private companies are not granted, except in the case of teaching or meteorological receiving stations. According to the latest statistics the following stations exist:—

Meteorological observatories	4
Official seismological stations	4
Educational stations	7
Stations open for public service to ships	8
Stations open for Government traffic only	13
Stations open for private traffic	2

There are no *experimental* stations and no *amateur* stations.

There is no special form of license, and the general conditions subject to which these licenses are granted can be found in the addition to Article 6 of the Royal Decree of January 24th, 1908, which Article was modified by Royal Decree of July 19th, 1914, also Article 6 of Royal Decree of February 8th, 1917, and Royal Decree of January, 1920.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address
Excmo. Sr. D. Vicente Pinies y Bayona	Home Minister	General Arrando 21.
Excmo. Sr. D. José Sanchez Guerra	War Minister	Claudio Coello 18.
Excmo. Sr. D. José Rivera y Alvarez de Castro	Navy Minister	Travesía de la Ballesta 7 dpdo.
Illmo. Sr. D. Luis Rodriguez de Viguri	Director - General of Posts and Telegraphs	General Porlier 50.
Sr. D. José Moreno Pineda	Sub-Director of Telegraphs.	Barquillo 30-pral.
Sr. D. Agustin Boyer	Head of Radio Service	Alcalá 133.

The only company holding permission to work wireless for public service is the "Compañía Nacional de Telegrafía sin Hilos."

The companies engaged up to the present in erecting wireless stations are the following: La Compañía Nacional de Telegrafía sin Hilos (Marconi system), A.E.G. Ibérica de Electricidad (Telefunken), La Compañía Ibérica de Telecomunicación, Centro Electrotécnico (Army Department), and Military engineers (for military purposes).

ORGANISATION.

Radiotelegraphy has from its initiation in practice, attracted much attention and interest in the Iberian Peninsula.

As early as 1899 commissions were appointed in Spain which, from time to time, issued reports to their Government on the subject of Wireless Telegraphy. As a result, a Royal Decree of May 21st, 1905, appointed a permanent commission, presided over by the Chief of the General Staff and including representatives of the War Office, Admiralty and Home Office, thus anticipating the first International Conference concerning Wireless Telegraphy—i.e., the one held in Berlin, 1906 (subsequently modified by the London International Convention of 1912).

Very little was actually done in regard to the erection of wireless telegraphic installations before 1906. Trials with unsatisfactory results had been carried out by the Army with field sets, and the Navy with stations on board the *Pelayo*, *Princesa de Asturias*, and *Giralda*. In regard to aviation, there is a project to install several stations on the aerial line of Toulouse-Rabat. The station at Prat de Llobregat is already handling traffic for this line. At Alicante another station has been installed for meteorological service and aviation. The lines of Madrid-Larache and Cantabrico (Postal Aviation) is also to be equipped with several radiotelegraphic stations.

A commission is setting out to study the establishment of various stations on the coast of Spain for Radiogoneometric Service, but up to the present it has not determined the sites of these stations.

For the service of lighthouses two radiotelegraphic-telephonic stations have been installed at Castelloñ and Columbretes, and tenders have been invited for the equipment of various other lighthouses, amongst which are Cabos Villano and Finisterre.

ADMINISTRATION.

Spain is one of the signatories of the important "Safety of Life at Sea" Convention, and has become a party to all the international agreements affecting radiotelegraphy. She has, moreover, passed separate laws and regulations framed with the object of establishing and developing this applied science in the home country and in her dependencies.

In the course of 1917 an important Royal Order was published by the Ministry of Marine, enacting that every merchant vessel of 500 tons and over must install wireless telegraphy. The text of this Order will be found below together with the following current Rules and Regulations.

A—Law of October 26th, 1907.

B—General Rules, January 24th, 1908.

C—Regulations, January 24th, 1908.

D—Royal Order of September 4th, 1914.

E—Royal Decree dated February 20th, 1917.

F—Royal Order of June 22nd, 1917.

G—Decree dated October 12th, 1917.

H—Royal Decree of February 8th, 1917.

I—Convention of Madrid, dated June 17th, 1918 (as modified on June 4th, 1919).

J—Royal Decree of January 18th, 1920.

LAW OF OCTOBER 26TH, 1907.

THE GOVERNMENT OF SPAIN IS HEREBY AUTHORISED TO ESTABLISH AND DEVELOP THE WIRELESS, CABLE AND TELEPHONE SERVICES.

A grace of God and by the Constitution, makes it known by these presents that Parliament has decreed and he, the King, has given his Royal assent to the following:—

ART. 1.—The Government is hereby authorised to establish and develop the wireless, cable and telephone services—availing itself of the co-operation of national institutions—by

means of a Royal Order which will be published within four months from the promulgation of this law.

ART. 2.—The expenses entailed by each service will be covered by the takings of the concession itself. In the case of certain concessions, the proviso is reserved that the establishment may be taken over by the State in whole or part, by Royal Decree, should the so doing be considered as in the national interests.

ART. 3.—Concessions regarding these new services will be granted by public tender, and

all necessary conditions must be fulfilled in order to safeguard the interests and security of the nation.

It is therefore decreed :

That all tribunals, magistrates, prefects, governors and all persons in authority, whether civil, military or ecclesiastical, whatever their rank and dignity, must obey and see to it that this law is observed in all its parts.

Given at the Royal Palace on October 26th, 1907.

GENERAL RULES.

PROMULGATED BY ROYAL DECREE AS THE BASIS FOR THE ESTABLISHING OF WIRELESS SERVICE IN SPAIN.

BART. 1.—The establishing and exploitation of all systems and apparatus available for the so-called "Hertzian telegraphy," "etherial telegraphy," and "radiotelegraphy," and all similar processes already invented or which may be invented in the future, shall be considered as included among the State monopolies regarding all means of electrical communications.

ART. 2.—The establishing and exploitation of the above telegraphic systems shall be controlled by (1) the Minister of the Interior in all matters appertaining to the general civil applications of the said systems, and (2) by the Ministers of War and Marine when and where those applications are specially connected with national defence and with the army and navy.

ART. 3.—All other official departments requiring a radiotelegraphic service can erect wireless installations by previous agreement with the Minister of the Interior. Such installations will be under the regulations established for the regular wireless service and wireless experiments.

ART. 4.—No experiments with the above-mentioned systems can be instituted in the Peninsula, or in the Balearic and Canary Islands, or in Spain's African possessions, without the authority of the Ministers of War, Marine or Interior, according to the kind of experiment which it may be proposed to carry out. Such experiments and trials shall be carried out under the official inspection of the respective departments responsible, excepting only those of a technical character carried out by the personnel of the scientific institutions of the State. These shall be independent of the said departments, providing they adhere to the regulations laid down.

ART. 5.—The Minister on whose authority the above installations and experiments are established and effected must give notice thereof to the other Ministers, giving them also full particulars regarding their service and conditions.

ART. 6.—Acting in agreement with the Ministers of War and Marine, in the cases herein aforesaid, and acting independently in all other cases, the Minister of the Interior can authorise the installation of wireless stations, provided that none have been officially installed, when the said installations may have been applied for by individuals, societies, corporations or national institutions, subject to the following rules:—

(1) The applicant shall address himself in the first instance to the Minister of the Interior, stating clearly the place where the installation is to be erected, and supplying a plan of the building, together with the conditions and advantages of the locality.

(2) Such installations and the services they are expected to render shall be subject to the special rules and conditions laid down in each case, and to the general regulations established by the State for its own installations and wireless service.

(3) The Government shall have the right to close the service under extraordinary circumstances affecting the safety of the State and the maintenance of public order.

(4) The Government shall also have the right to acquire by purchase, whenever it may be considered convenient, and with the previous payment of an indemnity, the wireless installations hereinbefore mentioned and the valuation for such compensation shall take into consideration the actual condition of the material and of the installation itself.

(5) The concessionaire shall let the Minister of the Interior know, in good time, the date on which the station or stations will start working, in order to allow the personnel of the telegraph office the necessary time for their inspection.

(6) The petitioner must not consider himself entitled to proceed with the work of installation until the necessary authorisation has been granted.

The following rules were added by Decree of July 19th, 1914.

(7) If the stations are to be fitted up merely for the reception of messages and for scientific purposes, or to serve as auxiliaries to meteorological observatories, authorisation for the same can be obtained from the Minister of the Interior, provided that the application be made by an Official Institution or by a private individual acting with the support of an Official Department.

(8) These receiving stations must be inspected by the Director of Telegraphs of the locality where they are installed.

(9) The persons appointed to carry out the reception must take an oath before the Civil Governor of the Provinces, to keep secret all information they may gather from the radiotelegraphic messages.

ART. 7.—The ships belonging to the national mercantile marine can install on board wireless stations worked on any of the wireless systems in current use, provided they obtain a special permit to do so from the Minister of Marine, who will grant it in accordance with the conditions established by the International Agreement and Service Regulations adopted in Berlin on November 3rd, 1906.

ART. 8.—Permits to establish wireless installations will not be granted to any private individual, society, or corporation belonging to a foreign nationality.

ART. 9.—Any person or persons exploiting or using clandestinely any system of wireless, or any person or persons attempting to conduct wireless experiments with apparatus available for the purpose, will be prosecuted in conformity with the Penal Code, the general law, the military orders, or the administrative regulations, as the case may be. Prosecution for these offences will be carried out by the authorities entrusted with the administration of the said laws, orders and regulations; and the State will confiscate all material employed for such purposes.

ART. 10.—By agreement between the Ministers of War, Marine and Interior, the wireless stations which may be considered necessary and convenient for commerce, navigation and national defence will be erected on

the seaboard of the Iberian Peninsula, on the Balearic and Canary Islands, and in the African possessions of Spain.

These installations will be under the control of the aforesaid three Ministers, as the case may be, both in the matter of supplies and of personnel and offices, and they will form a part of the national telegraphic system.

This linking up of the wireless with the land telegraphic service will be effected by the ministerial department controlling the various wireless installations.

ART. 11.—Authorisation is hereby given for the interchange of messages between ships belonging to the national mercantile marine and those belonging to foreign nations carrying wireless installations of current systems, and also for the interchange of messages between the said ships and the coast stations already established or to be established by the Ministry of the Interior on the sea board of the Peninsula on the Balearic and Canary Islands, and in the Spanish possessions in Africa.

The Minister of the Interior shall determine the date of the inauguration, the extension and the class of service of each station.

ART. 12.—The Government shall have the option of refusing or accepting those wireless systems the details of which have not been made public.

ART. 13.—The State accepts no responsibility for the wireless service. In the cases of errors or of non-delivery of radiotelegrams the procedure followed will be as established in Art. 35 of the Berlin regulations.

ART. 14.—Whatever the object of the installations, the wireless service shall be organised, whenever possible, in such a way as not to disturb other services of the same kind, or class. The ministerial departments interested shall adopt in each case such rules and regulations as may be found necessary, and shall also arrange regulations with other States regarding frontier installations.

ART. 15.—All wireless services, whether public, official, or private, carried on through the intermediary of land, coast and ship stations, shall be subject to the regulations hereunto attached.

ART. 16.—In addition to the rules herein contained, and those of the regulations mentioned in the previous Article, the provisions affecting Radiotelegraphy contained in the International Convention made in Berlin on November 3rd, 1906, together with the Service Regulations appended thereto, must be observed.

ART. 17.—The Director-General of Posts and Telegraphs shall see to the fulfilment of the stipulations made by Art. 13 of the International Agreement and of those made by Art. 37 of the Berlin Regulations, regarding the International Bureau established in Switzerland. The Ministers of War and Marine shall in accordance thereunto furnish the data required, which must be in the possession of the naval and military installations and stations and also data affecting the merchant ship stations, whose installations are authorised by the Minister of Marine.

ART. 18.—Messages received from or transmitted directly to a country or ship registered in a country which is not a signatory of the convention and regulations of Berlin, can only be admitted through the Spanish telegraphic system and through the coast wireless stations after a declaration has been made by the country in question expressing an intention of applying the rules laid down by the said convention, and their regulations regarding the

regular routine of the messages and the security of the accounts. In their radiotelegraphic service the coast stations shall give preference to the service of those countries which have become parties to the international agreements.

Articles 19 to 34 and the additional articles appended thereto deal with wireless installations on fortresses.

REGULATIONS.

GOVERNING THE WORKING OF THE WIRELESS STATIONS IN SPAIN.

GENERAL SERVICE.

C ART. 1.—All persons are allowed to make use of the wireless service, but the Government reserve to themselves the privilege of suspending for an indefinite period, as they may judge convenient, either every class of communication or such communications as belong to some particular class, or communications which affect some special station or stations.

ART. 2.—The following regulations and conditions laid down for the radiotelegraphic service in Spain, besides the provisions affecting radiotelegraphy contained in the International Convention made in Berlin on November 3rd, 1906, together with the Service Regulations appended thereto, shall be applied to all wireless stations, whether public, official or private, on the coast of the Peninsula, the Balearic and Canary Islands, the African possessions of Spain, and to all ships navigating those territorial waters.

ART. 3.—Ship stations shall be free to select their system of wireless installation; but for coast stations the administration shall adopt the system and equipment judged to be the best available from the point of view of scientific, technical and economic progress.

ART. 4.—All coast wireless stations shall be linked with the general telegraphic system, by means of private lines, in order to secure rapid communications.

ART. 5.—The working of wireless stations of all classes shall be carried out in such a way that, as far as possible, no disturbance may be occasioned to other stations of the same kind.

ORGANISATION OF WIRELESS STATIONS.

ART. 6.—Wireless stations of all kinds must maintain reciprocal communications with the least possible waste of power.

ART. 7.—Wireless stations in Spain shall use the international signals of the Morse Code for the transmission of messages.

ART. 8.—All wireless installations in Spain including both coast and ship stations, open to the public, must carry on an interchange of messages irrespective of their wireless systems.

During the working hours fixed for each coast station the latter must receive the Morse signals and must also have a transmitter so disposed as to be able to reply in the signals of the same code.

ART. 9.—Coast wireless stations must accept and must give *absolute priority* to calls for help from ships in danger. They must, moreover, answer the said calls in the same order of priority and pass them on as urgent messages to the general telegraphic service.

ART. 10.—The administration shall establish three classes of stations—viz., public, official, and private. Those of the first class must have a radius of 600 kilometres and over, those of the second class one of 400 kilometres (there or thereabout), and those of the third class one of 200 kilometres. Exceptions may be made in accordance with practical experience in working.

ART. 11.—First-class stations shall have three wavelengths at their disposal—namely, one of 300 metres, another of 600 metres, and another which may reach the maximum length, but which must not be less than 1,600 metres. The last two will be used normally. The second and third class stations shall have two wavelengths—namely, one of 300 metres and one of 600; and those of the second class will use normally the 600 metres wavelength, whilst those of the third class will use one of 300 metres, except in the cases referred to in ART. 14 final paragraph.

Coast stations situated near each other may maintain a special service between each other, provided that the distance between them allows of their doing so; but they must give preference to the Maritime Service. In the latter case, and for communications with national vessels on official matters, coast stations of both classes are allowed to use the special wavelengths to which their installations are adapted or adaptable for these services.

ART. 12.—Ships belonging to the Spanish Merchant Service shall use a normal wavelength of 300 metres, but they can alter this to a maximum of 600 metres.

Only in exceptional cases are vessels of small tonnage allowed to use *normal waves* of less than 300 metres.

ART. 13.—The General Post and Telegraph Office shall publish and keep always up to date a Directory showing the coast and ship wireless stations authorised and open to the public; together with the following information:—

(1) Name and geographical position of the coast station; identification signal in the International Code, and the port of register of the ship fitted with wireless.

(2) Call letters. (These must be all different and must be formed by groups of three letters.)

(3) Normal range.

(4) Wireless system adopted.

(5) The class of receiving apparatus whether automatic of auditive, etc.

(6) Length of waves used by the station. (The normal-wave must appear in italics.)

(7) Class of service rendered by the station. This covers such items as general communication, restricted communication (*i.e.*, communication with ships, with steamship companies, with ships fitted with apparatus of the same system, etc.); public long distance communications; communications of a private nature; special communications (*e.g.*, those of an exclusively official character), etc.

(8) Hours of service.

(9) Coast and ship station rates.

The Directory above-mentioned shall also include information regarding wireless stations not open to general public service and the existence of which has been made known to the International Bureau by the Spanish Administration.

ART. 14.—Wireless service in coast stations shall be, whenever possible, of a continuous nature, operating both night and day without interruption.

The Post and Telegraph Office shall fix, in each case, the hours of service of those stations where the service is limited.

Coast stations where the service is not of a continuous nature cannot close for the day without having transmitted all radiotelegrams to ships within their sphere of action and without having first received all the radiotelegrams advised by them. This proviso

shall also apply in the case of ships signalling their presence before the closing hour of the station.

ART. 15.—Private corporations cannot install ship stations nor can they work any such station without Governmental authorisation. Permits in these cases will be issued in accordance with the provisions of the Berlin Convention and Regulations, by the Ministry of Marine, and will be communicated by the latter to the General Post and Telegraph Office.

Ship stations duly authorised must fulfil the following conditions:—

First.—The system employed must be a tuned system.

Second.—The speed, both for the reception and transmission of messages, must not under normal circumstances be less than twelve words per minute, allowing five letters to the word.

Third.—The power transmitted to the wireless apparatus must under normal circumstances, not exceed one kilowatt. Nevertheless, greater power can be used if the ship is obliged to communicate over a distance exceeding 300 kilometres from the nearest coast station; or, if by reason of any interference, no communication can be established without increasing the power.

The service of the coast and ship stations shall be attended to by operators having their qualifying certificates issued by the General Post and Telegraph Office. This certificate must state the professional knowledge of the operator in the following matters:—

(a) Equipment of the apparatus.

(b) Auricular transmission and reception at a speed of not less than twenty words per minute.

(c) The knowledge of the regulations regarding interchange of wireless communications.

The qualifying certificate must also state that the Government has notified the operator that it is his duty to treat all communications as confidential.

Steamship companies are allowed to employ their own qualified operators provided they fulfil the conditions hereinbefore mentioned.

THE MAKING-OUT AND PRESENTATION OF MESSAGES.

ART. 16.—For the making-out and presentation of radiotelegrams the provisions of Articles 10, 11 and 33 of the Berlin Conference Regulations, in addition to the rules laid down in the following Articles, shall be observed.

ART. 17.—Radiogram forms must have the words Radio Service on the heading.

On the transmission of messages from ship to coast stations no mention will be made of the date and hour of deposit.

On the re-transmission of the telegraph lines the coast stations shall note their own name as that of the station of origin, followed by the name of the ship, and shall register as the hour of transmission the time at which the radio was received by them.

ART. 18.—The instructions for delivery of messages destined for ships at sea must be as complete as possible. The form must be filled up as follows:—

First.—The name of the addressee with additional indications if necessary.

Second.—The ship's name as it appears in the Directory, adding her nationality, and if necessary, as in cases where there are two or more ships of the same name, adding also her identification letters in the International Code.

Third.—The coast station name as it is given in the Directory.

ART. 19.—The following messages will not be admitted :—

- (1) Reply-paid messages.
- (2) Money orders.
- (3) Messages to be paid on delivery.
- (4) Messages demanding acknowledgment of reception.
- (5) Messages to be forwarded.
- (6) Messages at special rates, except those for transmission on the telegraphic section or over-land wires.
- (7) Messages marked "urgent" except on the over-land wired service, and then only with the reservation that the provisions of the international telegraphic regulations must be applied.
- (8) Messages to be forwarded by post or express.

ART. 20.—The messages may be written in plain language or in code in accordance with the interior regulations for ordinary service and with the international conventions on the matter.

ART. 21.—The officials at the stations can ask the senders of wireless messages to prove their identity.

RATES AND EXECUTIVE REGULATIONS.

ART. 22.—In the counting of words in order to apply the rates the officials must follow the provisions of Articles 18, 19, and 20 of the International Telegraph Service Regulations as revised in London in 1903.

ART. 23.—In conformity with Article 10 of the Berlin International Convention, the total rate for wireless messages shall include :—

- (1) The rate applicable to the maritime section, namely,
 - (a) the rate in force at the coast station.
 - (b) the rate in force at the ship station.
- (2) The rate established for the overland wired service, national or international, calculated in accordance with the general rules.

ART. 24.—The rate applicable to the maritime section is hereby fixed at 0.75 pesetas per word, of which 0.45 belongs to the coast station and 0.30 to the ship station.

With regard to the international service, in the case of messages to and from foreign ships, these rates shall be payable in francs, on the same basis.

The rate applicable to the overland wired service, national or international, shall be calculated and allocated in accordance with the interior regulations and with the international regulations.

The minimum rate applicable to the maritime section of wireless messages is hereby fixed at 7.50 pesetas, which is the wireless rate for a radiogram of ten words.

ART. 25.—The coast station rate will be charged only once, even if the message goes through several coast stations.

ART. 26.—The whole cost of the radiotelegram must be paid by the sender, and at ship stations a tariff indicating this must be displayed.

ART. 27.—For the purposes of book-keeping the coast station must consider itself as addressee with regard to the messages coming from the telegraphic service on their way to ship stations; and the coast station must consider itself as the original office with regard to the messages coming from ship stations for transference to the telegraphic service.

ART. 28.—Coast and ship station rates shall be calculated in accordance with the number of words computed, and in accordance with Article 23 of these Regulations.

ART. 29.—Merchant ships at sea can interchange messages if they find it convenient. The rates to be charged in such cases shall be laid down by the respective owners, and shall not be taken into account by the National Administration.

ART. 30.—Ship stations on Spanish vessels shall send to those chartering them, upon their arrival in port, all documents in connection with and referring to all messages exchanged with coast stations. The charterers shall send such documents monthly to the General Post and Telegraph Office, where it will be kept for a minimum period of twelve months and where liquidation of the accounts must be made in due course.

ART. 31.—The installations on Spanish men-of-war shall use, in their communications with the coast stations open to the public, the wavelengths which—under the terms of the Berlin Regulations—may be agreed upon between the Minister of Marine and the Minister of the Interior for the official service.

Both Spanish and foreign men-of-war can exchange private messages with the coast stations or with merchant ships; but only for the benefit of their crews. In such cases the technical and tariff provisions of these Regulations and those of the Berlin Convention and the Berlin International Regulations for the transmission of public correspondence, must be observed, as in the case of a merchant ship station open to the public. The regulations established to prevent the disturbance of wireless communications must be most carefully adhered to.

ART. 32.—When men-of-war exchange messages (private) with coast stations or with other ship installations they must follow the rules established for the computation of words and the collection of rates. In such cases the ship's purser in the Spanish vessels and the Minister of Marine shall respectively exercise similar functions to those assigned to the administration on board, and to the owner, as far as merchant ships are concerned.

In the calculation of coast and ship station rates for private service exchanged with foreign men-of-war, the General Post and Telegraph Office shall come to an understanding with the Administration of the country to which the said men-of-war belong.

ART. 33.—The same provisions shall hold good in the case of a military wireless installation, either permanent or portable, when the said installation utilises the stations established by the Administration for Public Service.

ART. 34.—Should, by some accident, the Submarine Cable Service be substituted for the Wireless Service for the sending of a message, the former shall only receive the rate applicable to a coast station. If communication by wireless is established between two points in Spanish territory otherwise without telegraphic communication, the rates charged shall be those of the Interior Telegraphic Service, and the rules of that service shall apply, except in the cases provided for in Article 19 of these Regulations.

ART. 35.—In the matter of transmission of messages, of the signals to be employed in them, orders of transmission, calls, acknowledgments of receipt, instructions as to the route to be followed by the radiograms, and

instruction as to their final destination, the provisions made in Articles 15 to 32, both inclusive, of the Berlin Regulations must be observed.

ART. 36.—In cases when the return of charges made for radiotelegrams has been justly established the provisions of Article 35 of the Berlin Regulations must be observed.

BOOK-KEEPING.

In matters referring to book-keeping for the international wireless service the provisions of Article 36 of the Berlin Regulations must be observed.

GENERAL RULES.

ART. 38.—Coast stations, previously authorised by the General Post and Telegraph Office, shall furnish the authorised agents of Maritime Information Bureau with all such particulars concerning wrecks and disasters at sea as are of any interest to navigators, always provided that the said agents apply for such information.

ART. 39.—Authorised interchange of messages between ship stations on the high seas must be carried out in such a way as not to disturb the coast station's service. The latter shall have, as a general rule, the right of priority for Public Service.

ART. 40.—The order of transmission between ship stations on the high seas shall be settled by agreement between themselves.

The re-transmission of messages between ships at sea shall be arranged by agreement between the interested parties.

ART. 41.—The provisions of the International Telegraphic Regulations shall be applied by analogy, to radiotelegraphic communication as far as they are not antagonistic to these Regulations, or the Convention, Additional Agreement, and the International Regulations of the Berlin Conference.

ART. 42.—The provisions of Articles 5, 6 and 9 of these Regulations shall apply to all classes of wireless installations, official and authorised, even if they are not open to Public Service.

Madrid, January 24th, 1908.

Approved by His Majesty the King
—Maura.

(Seal.)

ROYAL ORDER OF SEPTEMBER 4TH, 1914.

ART. 1.—According to the Royal Order of January 25th, 1908, the inspection and regulation of the Wireless Telegraph Service on board vessels of the Mercantile Marine are under the supervision of the Minister of the Navy, and by delegation to the Director-General of Fisheries and Merchant Shipping. The installations should fulfil all the requirements of the said Royal Order together with the rules and regulations of the London Radiotelegraph Convention of June, 1913, and the Rules of the Safety of Life at Sea Convention, January, 1914.

Everything affecting the service shall be controlled by the Navigation Department, which shall attend to the following matters:—

(1) The registration of all new installations authorised.

(2) The forwarding of all documents regarding such new installations accompanied by the order for their recognition.

(3) The sending of a report to the Home Office and War Office as to the result obtained from the various installations, together with indications of their characteristics.

To attend to this service the Director of Navigation and Fisheries will nominate a chief or a superintending official, together with five wireless inspectors on the coast, and this staff must have the qualifications as set forth in the Royal Order of May 21st last.

ART. 2.—The distribution of the staff on the coast and in the maritime provinces under each inspector shall be as follows:—

Barcelona.—Maritime provinces of Barcelona, Tarragona, Valencia, Mallorca, and Minorca (the residence of the inspector being at Barcelona).

Cartagena.—Maritime provinces of Alicante, Cartagena, Almeria, and Malaga, Melilla and Ceuta (the residence of the inspector being at Cartagena).

Cadiz.—Maritime provinces of Cadiz, Canary Islands and Huelva (the residence of the inspector being at Cadiz).

Vigo.—Maritime provinces of Vigo, Pontevedra, Villagarcia and Coruña (the residence of the inspector being at Vigo).

Bilbao.—Maritime provinces of Gijón-Santander, Bilbao and S. Sebastian (the residence of the inspector being at Bilbao).

ART. 3.—The wireless inspectors shall be under the orders of the Commandante de Marina of districts to which they are attached and in the ports of which they will have to make their annual inspection. They will only be allowed to leave their habitual place of residence when, for the convenience of the shipbuilders, they have to inspect a station in any other part of their district.

ART. 4.—The wireless inspectors must attend to the following duties:—

(a) To verify and inspect all new installations concerning which they may have been notified by the Director-General of Navigation and Fisheries that they are ready for public service, and to send in a report of the result of their verification and inspection.

(b) To visit annually the installations of such ships as are registered in the ports belonging to the districts within their jurisdiction, and to issue the necessary certificate according to the London Safety of Life at Sea Convention.

(c) To inspect foreign ship stations on board vessels which take passengers in Spain with the object of verifying that they are in possession of the certificate issued under the Safety of Life at Sea, which certificate must have been issued by the maritime authorities of their respective countries.

(d) To report to the Director-General all remarks or complaints made by the ship-owners, crew or passengers in regard to this service so that the aforesaid Director may take such necessary steps as he may think fit.

(e) To see that all the staff that work the installations are in possession of the Government certificate according to the law of January 24th, 1908, with the object of making sure that all these installations are handled by duly qualified operators.

ART. 5.—For these duties a register book will be given to the wireless inspector in which he shall note the following particulars of each visit:—

(a) Date and place of inspection.

(b) Name of the vessel.

(c) System, radius, wavelengths, etc.

(d) Names of operators and dates of their certificates.

A copy of this information is to be sent every quarter to the Director-General in order that he can make out a list and maintain a register devoted to all important information and data.

ART. 6.—The naval and marine authorities will do their best to facilitate the work of the inspector, putting at his disposal the *craft* and *personnel* required by him for the fulfilment of his duties.

ART. 7.—When it is desired to install a wireless station on board a ship, the builder, the owner, the agent or the captain must ask for permission from the Director-General of Navigation and Fisheries. As soon as the installation is completed the applicant must notify the above authority, stating the port in which he desires the visit to be made, so that the wireless inspector may receive instructions accordingly.

ART. 8.—Wireless installations are subdivided into three classes:—

- (1) Stations with permanent service.
- (2) Stations with limited service.
- (3) Stations with special service.

Class 1 includes all vessels which carry twenty-five or more passengers and which have an average speed of fifteen or more knots. This class includes also ships carrying 200 or more passengers, having a speed of over thirteen knots, and travelling a distance of over 500 miles between two consecutive ports. The latter vessels should carry at least two telegraphists.

To Class 2 belong all the steamers not included in Class 1, provided they are fitted to carry twenty-five passengers or more. During the voyage the ships of this class must have one telegraphist on constant watch during seven hours per day and ten minutes at the beginning of the other hours.

In cases where the vessel is more than 500 miles distant from the nearest coast, the watch must be permanent.

To Class 3 belong all ships which are not included in Classes 1 and 2, and having fifty or more persons on board and carrying less than twenty-five persons or none.

The watch service on these ships must be continuously maintained during a transatlantic voyage or when the ship is over 1,000 miles distant from the coast. In special circumstances, and whenever advisable for the safety of life at sea, ships of every class may be obliged to keep a constant watch.

Vessels belonging to subsidised Government lines are obliged to carry wireless no matter where they sail or what crew they carry.

ART. 9.—The radius of the wireless station shall be a minimum of 100 miles at sea in daytime when communicating with ships under normal conditions and circumstances.

All the stations must be provided with an emergency set, installed on the upper deck, which must be kept in the best condition, having a source independent of the main electric supply and capable of being set in instant working order; this set must be able to work during six hours at least, and must possess a radius of a minimum of eighty miles for ships of the first class and fifty miles for the others.

ART. 10.—When testing the transmission and reception of messages, both installations shall be made to work with a ship at a distance of about 100 miles.

The wavelength and the oscillation current of the aerials must be measured.

When the Director-General thinks it necessary, the curves of resonance will have to be made and the degrees of coupling adjusted. When it is necessary to test the state of the receiving apparatus, the Director may order that one or several of the officers in that service shall mark trial tests with the different stations at various distances during the voyage.

ART. 11.—Inspections must be made at the ports of Barcelona, Cartagena, Cadiz, Vigo and Bilbao, which are the places of residence of the wireless inspectors. However, if for the convenience of builders, the inspection should be carried out at some other port, these builders must defray the travelling expenses of the said inspector.

ART. 12.—The radio inspectors shall receive remuneration for all the inspections they carry out with regard to wireless installations.

The amount of this remuneration shall be 100 pesetas with an increase of twenty-five pesetas for each auxiliary transmitter which the ship may carry independent of the emergency installation. Such remuneration shall be the same whatever the rank held by the radio inspector.

The annual inspections held for the issue of certificates in accordance with the provisions of the London Safety of Life at Sea Convention shall be made free of charge.

(Signed) RAMON ESTRADA,
Director-General of Navigation and
Marine Fisheries.

Madrid, September 4th, 1914.

ROYAL DECREE DATED FEBRUARY 20TH, 1917.

Inscribed in the Official Record Under No. 49.

E His Majesty the King (whom God save) inspired by the sentiment of humanity, of which the crews of the merchant ships, which in these difficult times with bravery and with risk to their lives maintain our maritime commerce are deserving, has, in accordance with the proposal of the Director-General of Navigation and Sea Fisheries, designed to decree—

1. All merchant ships of 500 tons and upwards which make long sea voyages or long coasting voyages must carry a wireless installation having a minimum range of 100 miles, as laid down under the International Radiotelegraphic Convention.

2. Similarly the said ships will carry one or more lifeboats in proportion to the number of the crew, each fitted with its own motor, or provided with adjustable motors of such a kind as to answer the same purpose.

3. Local directors of navigation shall allow a certain time for each ship to be provided with these things, the shipowners having to certify before the said authorities that they have taken the necessary steps or made definite contracts to obtain them.

ROYAL DECREE DATED JUNE 22ND, 1917.

F In view of the request made by the "Cia Nacional de Telegrafia sin Hilos," His Majesty the King (whom God guard) has been pleased to order that all the radiotelegraphic stations concerned in the Royal Decree of Feb. 20th last inscribed in the Official Record under No. 49 shall carry emergency installations in accordance with Article 9 of the regulations for the service of installation and inspection of radiotelegraphy on board merchant ships on September 4th, 1914, excepting those installations which have

sources of energy independent of that which forms a regular part of the ship's equipment and is fitted on deck.

Madrid, June 22nd, 1917.

ROYAL DECREE DATED
OCTOBER 12TH, 1917.

Issued in the form of a Circular Published in the Official Gazette of the Spanish Ministry of Marine No. 235 of November 19th, 1917.

G In view of the collection of information by this Administration for the fulfilment of the Royal Orders of February 20th, and June 16th last (inserted in the Official Gazette of this Ministry and numbered 29 and 143 respectively) relative to the complete installation of wireless telegraphs on board merchant vessels of 500 tons and upwards, which are engaged in overseas and extended coasting trade, with a minimum range of 100 miles, on the conditions notified in the regulations governing wireless telegraphy.

And in view of the data recently communicated by the companies "A. E. G. Thomson Houston Iberica" and "Nacional de Telegrafia sin Hilos," the former saying that its resources permit the construction of 25 stations per month and that within one year 300 can be provided, whilst the latter give an assurance that they are able to supply wireless stations with the least possible delay, but not defining the duration of this delay.

It resulting from previous communications from this department that there are 57 stations already fitted and arranged for, and that there remain some 80 to be constructed or fitted.

It resulting, moreover, that this Administration deems a delay of eight months to be sufficient for the "Compañia Nacional de Telegrafia sin Hilos" to supply these 80 stations, that company being looked upon as a firm reputed in the business world as of good standing and with resources fully equal to those of the "A. E. G. Thomson Houston Iberica" and the delay of eight months being the double of that within which the latter undertake to fulfil those engagements.

His Majesty the King (whom God guard) in conformity with the information supplied by the Administration, and in agreement with his Privy Council, has thought it well to dispose that, beyond a delay of eight months from the date of publication of this Royal Order, the sailings of the ships mentioned in his Decree of February 20th of the present year shall be stopped if they fail to be fitted with complete wireless stations in accordance with the existing regulations, and that the Marine authorities in the provinces shall carefully communicate this decision to those who appear in their books as proprietors of the respective ships.

ROYAL DECREE OF
FEBRUARY 8TH, 1917.

H ART. 1.—All civil private wireless stations, whether they be transmitting and receiving stations, receiving alone, or assigned for the use of scientific or auxiliary meteorological observatories, are subject to the inspection of the Government, such inspection being carried out by the Home Office and the General Direction of Posts and Telegraphs.

The inspection shall be carried out by telegraph officials, and its object is to promote public order and interest, and protect the rights of the communication monopoly that belong to the State, in fulfilment of the present dispositions on the matter and in strict observance of the concession conditions.

In accordance with the rights granted by contract with the State to the "Compañia Nacional de Telegrafia sin Hilos," this company can also perform the inspection of the above-mentioned wireless stations at her own expense.

The appointment of inspectors by the company shall be countersigned by the Postmaster-General, and when in performance of their duty will be treated as public officials and be granted the same facilities in the exercise of their duties as those given to the Government inspectors stated in Arts. 3 and 4 of this Royal Decree.

The Home Office shall decide all questions which might arise in the carrying out of this private inspection.

ART. 2.—In addition to the inspection work which the Home Office or the Postmaster-General may at any moment judge convenient to carry out a constant inspection service shall be carried out in the said civil radiotelegraphic stations under the Spanish State authorities.

ART. 3.—To carry out the constant inspection service stated in the preceding article, an inspector for each station shall be appointed by the Postmaster-General, who shall superintend the work, and the station shall not be used even for scientific purposes, except under his personal supervision. The inspector shall adopt such measures as he thinks fit to prevent the station being used during his absence.

When the working of a station cannot be attended to by one official alone, the Postmaster-General may assign two or more inspectors, and distribute between them the work of the station as he may judge convenient.

ART. 4.—Access will be allowed to the inspector of the station at any time of the day or of the night without need of permission, request, or notice of any kind.

For this purpose the keys of the place or places in which the apparatus is installed shall be given to the inspector by the owner or licensee of the station, so that no obstacle or delay may prevent his entrance.

ART. 5.—A weekly report of the general working condition of the station, stating the nature of the service, the day, hour, and minutes when they were effected, and any observation the inspector may judge should be specially noted, should be sent by him to the Telegraph Direction.

Immediate notice shall also be given by the inspector to the General Telegraph Direction of any technical or legal anomaly observed in the working of the station, and the orders of the authority shall be transmitted, executed, or caused to be executed by the said inspector.

ART. 6.—All applications for license to install a radiotelegraphic station must comply with the following conditions, as well as with all others in force at the time:—

(1) The purpose for which the station is to be employed must be clearly expressed.

(2) A plan of the site where the station is to be installed, its communication with the public street or road, and the places where the apparatus are to be mounted in a 2 per cent. scale, and another plan with diagram of connections and details of aerial in a 10 per cent. scale, shall accompany the request for the licence.

(3) A detailed list of the apparatus specifying their nature, trade mark, and manufacture number (if any), must accompany the application.

(4) The name, age, address, and professional title (if in possession of one) of the operator or operators who will work the station must be granted.

The Home Office Minister can grant or refuse the concession of the license, and can also modify the technical conditions of the installation before or after the licence has been granted.

ART. 7.—No modification either of the installation or disposition of the station is allowed without authorisation of the Home Office Minister acting on information of the appropriate inspector.

All modifications should be reported to the General Telegraph Direction by the inspector of the station.

ART. 8.—Before a station is opened the proprietor or licensee will deposit a sum of 5,000 pesetas in the general safe of deposits at the disposal of the Postmaster-General, and set aside to cover the pecuniary obligations which the proprietor or licensee might incur.

This sum must be replaced should it diminish or disappear in making good the obligations for which it is set aside.

ART. 9.—The proprietor or licensee must pay all expenses incurred by the final inspection. These expenses comprise a sum which will be fixed by the Postmaster-General, and which must not exceed 2,000 pesetas per annum, to be given to the inspector in monthly payments as a reward for his services, and in payment of all office expenses.

Office accommodation should also be provided for the inspector of the "Compañía Nacional de Telegrafía sin Hilos," should there be one.

Should there be no telegraph office in the place where the station is installed, the proprietor or licensee must provide decent food and lodging for both the official and private inspectors, should there be any.

ART. 10.—The General Direction will classify as major or minor offences any infringements by the proprietor or licensee or any of their staff of this Royal Decree or any other standing orders in this regard.

In all cases the following will be considered as a major offence:—

(1) Not fulfilling the conditions of the licence.

(2) Any modification in the installation or arrangement of the station without due authorisation of the Home Office.

(3) Deliberate obstruction of the inspector with regard to free access to the station under his charge.

(4) The using of the station for any service without the presence of the inspector.

(5) Infringement of the terms of Art. 8 of the Royal Decree.

ART. 11.—Apart from other criminal or civil responsibilities involved in the offences enumerated in the preceding article, the following penalties will be exacted:—

(a) Fine of 100 to 500 pesetas for petty offences.

(b) Fine of 501 to 2,000 pesetas for serious offences, together with loss of the licence and apparatus. The station will be dismantled at the General Direction of Telegraph's will.

The working of the station may be immediately suspended by the inspector on his discovery of any of the offences enumerated in numbers 1, 2, 3 and 4 of the preceding articles.

ART. 12.—Apart from other criminal responsibilities binding upon the inspector, acts of commission or omission infringing this Royal Decree or any other standing regulations on the matter will be considered as serious offences, and will be punished in accordance with the rules and regulations of the Post and Telegraph Corporation. Should the inspector not belong to the said corporation (*i.e.*, hold the rank of private inspector), the offence will be punished with the fine of 100 to 2,000 pesetas and disability from continuing in his office, the "Compañía Nacional de Telegrafía sin Hilos" being responsible for the payment of the fine.

ART. 13.—Any illicit station discovered shall be immediately dismantled, the General Direction taking possession of all apparatus. The proprietor and any other persons who may be found guilty of installing or working such a station shall, apart from other criminal responsibilities to which they be liable, be punished with a fine of 2,000 to 5,000 pesetas.

The owner of the building, director of the establishment, society, or corporation in whose premises a clandestine station is installed, and who, as soon as it comes to his knowledge, does not report the fact immediately in the quickest possible way to the General Direction, will incur the same responsibilities.

ART. 14.—Trial for these offences shall be held in public.

An informer shall be entitled to half of the amount of the imposed fine.

ART. 15.—The use of radiotelegraphy granted to official centres for scientific purposes and worked by public officials is not subject to constant inspection, and is excused the deposit referred to in Article 8. The service will not be suspended, nor the apparatus confiscated, should any infringement be committed by the licensee or staff; but the persons guilty of the offence shall be subject to the criminal or civil responsibilities which may personally affect them. A report will be sent in by the Minister of the Home Office to the Minister under whose supervision the station is administered of the offences committed in order to assure the observance of this Royal Decree, and that these offences should be noted in the personal service records.

ART. 16.—The terms of the Royal Decree do not concern the "Compañía Nacional de Telegrafía sin Hilos" (except those which specifically affect this company), and the inspection of these stations will be subject to the conditions of the contract with the State.

ART. 17.—The authorisation for the working of radiotelegraphic stations granted with priority under the Royal Decree must be carried into effect. The General Direction of Telegraphs will immediately organise the constant inspection service for the stations not comprised in Articles 15 and 16.

A term of eight days is granted from the date of publication of this Royal Decree for all private authorised existent stations to send in to the General Direction the information referred to in numbers 2, 3, and 4, of Article 6, and also make the deposit ordered in Article 9. If the term expires before the fulfilment of these obligations, the station will be considered as illicit, and immediate proceedings taken under Article 13, unless the licensee shall present before the expiration of the fixed term a renunciation of his license to the Minister of the Home Office through the General Direction. He must as a preliminary thereto have dismantled the apparatus.

The same term of eight days is given to those in charge of existing radiotelegraphic stations to hand over to the General Direction the information asked for in numbers 2, 3, and 4 of Article 6. Should the term expire without the fulfilment of these conditions proceedings will be taken according to Article 15.

CONVENTION OF MADRID, DATED JUNE 17TH, 1918, AS MODIFIED BY CONFERENCE OF JUNE 4TH, 1919. CONCERNING WAVELENGTHS TO BE USED BY STATIONS UNDER SPANISH CONTROL.

I. The undersigned have held meetings of a semi-official character in the Ministry of State, Madrid, Spain, on June 12th, 13th, 14th and 15th, 1918, for the purpose of discussing the means for avoiding interference in communications by wireless

telegraphy and for the establishment of a programme which shall benefit mutually the radiotelegraph services of the various Governments represented.

2. Attached and below are three annexes marked (A), (B) and (C), in which are contained the agreements unanimously arrived at by all the representatives present.

Annexe (A) sets forth the agreements adopted.

Annexe (B) contains the organisation proposed in the transmission and reception by wireless telegraphy of the stations of the Spanish Army and Navy.

Annexe (C) includes the organisation proposed in the transmission and reception by wireless telegraphy of the stations of the Compania Nacional de Telegrafia sin Hilos and of the Ministry of State.

ANNEXE (A).

AGREEMENTS ADOPTED.

1. The Agreements of the International Radiotelegraph Convention of July 5th, 1912, will be strictly observed.

2. Always whenever possible, communication on a wave of 600 metres will be prohibited.

3. In accordance with the Convention, Spanish merchant ships shall continue to use the 600 metre wave when communicating with commercial coast stations and between themselves.

4. Although war vessels are entitled to use any length of wave whatever, it is agreed for mutual convenience that Spanish war vessels shall not communicate with naval and military stations or between themselves on 600 metres, but with the wavelengths specified in the Annexe (B).

5. It is agreed that inter-communication between Spanish coast stations, whether military, naval or commercial, shall not be made with a 600 metre wave, but with the wavelengths fixed and specified in the Annexes (B) and (C).

6. When a Spanish military, naval or commercial coast station desires to send a message to a Spanish coast station (commercial) which listens-in on a wave of 600 metres, the call will be with a wave of 600 metres and immediately afterwards they will give each other the conventional signals to change over to the 900 metre wave, and all subsequent communication will take place on that wave.

7. No operator of a coast station or ship station shall listen-in for more than one wavelength during the same period of time.

8. As far as possible, efforts shall be made that Spanish wireless telegraph stations do not interfere with the advices transmitted by coast stations at fixed hours or with the familiar calls for assistance (*llamadas de auxilio*).

The hours at which those advices are transmitted by stations on a wave of 600 metres are at present as follows:—

Station.	Call Signal.	Time (G.M.T.).
Casablanca ..	CNP	0245, 1045, 1845.
Gibraltar ..	BYW	0830, 2030.
Monsanto ..	CTV	0145, 0945, 1345, 2145.
Orán ..	FUO	0030, 1400.
Toulon ..	FUT	0930, 2040.

Wavelengths longer than 600 metres, on which the aforementioned advices are transmitted, are not used in the Spanish organisation given in the Annexes (B) and (C).

9. As far as practicable, the wavelengths which have been adopted by all the nations for their press messages will be respected and not interfered with.

No press message shall be transmitted with a 600 metre wave.

10. With the object of obviating interference by the North American, English and French stations with the Spanish stations, the wavelengths selected in the Annexes (B) and (C) will not be changed as far as possible.

11. No call signal or any other working signal shall be made more than three times in each call, and no call signal shall be repeated more than three times in a quarter of an hour. (International Radiotelegraph Convention of London, July 5th, 1912, Articles XXV and XXVI.)

12. All nations represented agree to take the necessary steps to obtain the most exact synchronisation possible at all their stations with a view to ensuring the efficiency of the organisation of wavelengths given in the Annexes (B) and (C), and so that the intermediate wavelengths of 300, 750, 1050, 1350, 1650, 2200, 2750, etc., shall remain free for the use of North American, English and French warships and stations.

13. All communications by wireless telegraphy shall be limited as far as possible.

14. Meetings of a semi-official character will be held in Madrid every six months (June 1st and December 1st) between the representatives of the United States, England, France and Spain, with the object of exchanging impressions regarding:—

- (a) Mutual organisation;
- (b) Means for eliminating interference;
- (c) Change of wavelengths;
- (d) Complaints.

ROYAL DECREE OF 18TH JANUARY, 1920.

On wireless telegraph and telephone installations for scientific purposes.

J Wireless telegraph, or telephone, sending and receiving, or only receiving, installations, for scientific purposes, are divided into two classes, viz.: (1) Permanent installations; (2) Provisional installations.

Permanent installations, either for research, or as a complement to meteorological observatories, or for any other purpose, will be subjected to the prescriptions of the Royal Decree dated 8th February, 1917.

Provisional installations, or those fitted with the sole object of scientific experimenting or study of any branch of wireless communication, will be permitted by the Home Minister at his discretion for a given time, under the following conditions:—

(1) Applications shall be accompanied by a full report of the experiments and researches which the applicant intends to carry out, showing the place or places destined for these experiments, with diagrams, if possible, of the aerial, transmitting or receiving apparatus and their category and importance.

(2) It must be stated for how long the license is required in order to carry out experiments and for how many hours per day it is intended to use it.

(3) The installation shall be inspected by an appointed official of the Spanish Telegraphs, and always under the control of the local Chief of the Telegraphs.

(4) As every license will be issued for a fixed time, at the expiration thereof the installation, comprising aerial and apparatus, shall be dismantled and the matter reported to the Director of Posts and Telegraphs.

(5) Employing the installation for other than experimental and research purposes will entail a fine upon the licensee of pesetas 500 to 2,000, in addition to the confiscation of apparatus and aerial, which shall become the property of the telegraph authorities.

(6) The licensee shall bear all expenses consequent upon the official inspection of this class of installation, in accordance with the stipulations of the Director of Posts and Telegraphs.

(7) Installations licensed for experiments in transmission shall be operated only at the hours and on the wavelength authorised by the Director of Posts and Telegraphs, in order to prevent interference with official and public services.

CANARY ISLANDS

The group of islands known under the above name consists of seven large and several small islands, whose combined area amounts to about 2,807 square miles and possesses a population of 520,516. It is commonly supposed that these islands constituted the Fortunate Islands of ancient history. They were forgotten, however, for several hundreds of years, but were re-discovered in 1334, when a French vessel was driven on to them by a storm.

They constitute at the present time a colony of Spain, and are administered by Spanish representatives.

CONTROL.

Wireless telegraphy in the islands is under the control of the *Compañía Nacional de Telegrafía sin Hilos*, which possesses two stations, one at Tenerife and the other at Las Palmas.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. B. Walsh	Chief Engineer	Teneriffe.
Mr. W. Sparkes	Chief Engineer	Las Palmas.

There are five operators at each station.

ORGANISATION.

At the end of 1911 the *Compañía Nacional de Telegrafía sin Hilos* took over the wireless stations of Tenerife and Las Palmas (at that time of 20 kW. power) from the old French company, and held trial programmes with the Poldhu station in England. As a result of this, each station was fitted with a Marconi 3 kW. set for ships. At the present time Tenerife has three valve receivers and one crystal receiver for ships, with a low frequency amplifier. It is anticipated that the Spanish Government will shortly install a direction-finding station, but at present the site has not yet been fixed. The Tenerife station sends out Press Bulletins in English and Spanish daily at 0330, also a meteorological report in code is transmitted twice per day to Carabanchel, a military station in Madrid. Under the jurisdiction of the Canary Islands falls the military radio station at Cabo Juby, on the African mainland. This is a 3 kW. Telefunken set.

ADMINISTRATION.

No special Laws and Regulations exist under which wireless telegraphy and telephony are administered, their working being regulated in accordance with the International Rules.

SPITZBERGEN

(SVALBARD)

(See also Map Section)

Including : Bear Island, North East Land, Prince Charles Foreland, Edge Island, Barents Land, King Karl's Land, Hope Island.

THIS group of barren islands, discovered by Barents in 1596, has formed the starting point for many expeditions in their endeavours to reach the North Pole. They lie in about 80° N. latitude, and between 10° and 30° E. longitude, and possess rich mineral resources. Their total area is 25,000 square miles.

CONTROL AND ORGANISATION.

Frequent attempts have been made in recent years to open up the archipelago commercially, and with that object several companies have been formed. These companies possess wireless stations which correspond with the wireless station at Green Harbour, owned and worked by the Norwegian Government.

The private stations are placed in Advent Bay (*Store Norske Spitsbergen Vulkompani*), Kingsbay (*Kinsbay Kulkompani*), Sveagruvan (*Sveakol*), Coalbay (*Anglo-Russian Crumant Co.*), Calypsobay and Marble Island (*Northern Exploration Co.*), and Capboheman (*Isefjord Coal Co.*). This last named station is not in use.

At Quade Hook is placed a meteorological wireless station which is owned by the Norwegian Meteorological Institute. No laws and regulations yet exist regarding the working of radiotelegraphy, but as the territory has been placed under the suzerainty of Norway their proximate promulgation is to be expected.

On Bear Island, situated about midway between Norway and Spitzbergen a 3 kW. Marconi Station has been erected. This land station is owned privately by the Bear Island Code Company in Tromsø, and is intended for communication direct with the Government wireless station at Ingøy (Norway).

STRAITS SETTLEMENTS

(See also Map Section)

Including : Christmas Island, Labuan, Cocos Islands.

THE Crown Colony of the Straits Settlements comprises Singapore, Penang, and Malacca. These settlements were transferred from the control of the Indian Government to that of the Secretary of State for the Colonies on April 1st, 1867. Labuan, the Cocos Islands and Christmas Island have since been annexed to the Colony.

The administration is vested in the hands of a Governor, aided by an Executive Council, legislation being under the direction of a Legislative Council, presided over by the Governor. The combined area of the colony is about 700 square miles, with a population of 800,000.

ORGANISATION.

Commercial wireless telegraph stations have been erected at Paya Lebar, Singapore, opened for traffic on October 8th, 1915, and Penaga, Penang, opened for traffic on February 21st, 1916. A 6-kW. C.W. transmitter for long distance ship-to-shore and shore-to-shore work was installed at Penang in the latter part of 1922. These installations are Government land stations under the control of the Postmaster-General.

The Brunei Government opened three small 60 watt C.W. stations in August, 1921, for inland communication at Brunei, Labuan and Temburong, thus placing Brunei in direct telegraphic communication with the outside world. Three more stations are available for erection when needed.

Wireless telegraphy is a State monopoly, but licenses to erect and work stations are issued to private companies or individuals.

There are no companies engaged in the manufacture of wireless apparatus, and no wireless societies, clubs, or publications. Arrangements have not yet been completed for the installation of aviation stations, and there are no wireless arrangements for the transmission of meteorological signals.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. H. C. Sells	Acting Postmaster-General ..	Singapore
Mr. F. H. Dupree	Engineer Operator	Singapore
Mr. S. R. Drayton	Engineer Operator	Penang
Mr. J. W. Machan	Assistant Engineer Operator ..	Singapore
Mr. L. R. Watts	Assistant Engineer Operator ..	Penang
Mr. P. H. F. George	Assistant Engineer Operator ..	Brunei

ADMINISTRATION.

The administration of wireless telegraphy is regulated by the Wireless Telegraph Ordinance of 1912, together with the regulations issued thereunder, which are printed in *extenso* below.

A—Ordinance No. 55, Part V, Wireless Telegraphy.

B—Regulations thereunder.

ORDINANCE No. 55. PART V.

WIRELESS TELEGRAPHY.

A 33. (1) In this Part the expression "wireless telegraphy" means any system of communication by telegraph, as defined in Part I, without the aid of any wire connecting the points from and at which the messages or other communications are sent and received.

(2) Nothing in this Part shall present any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

34. The Governor may, whenever he deems it expedient to do so, license the establishment of any wireless telegraph station or the installation or working of any apparatus for wireless telegraphy in any place in the Colony or on board any British ship registered in the Colony.

35. (1) No person shall establish any wireless telegraph station or install or work any apparatus for wireless telegraphy in any place in the Colony or on board any British ship registered in the Colony, except under and in accordance with a license granted by the Governor.

(2) Every such license shall be in such form and for such period as the Governor in Council

determines, and shall contain such terms, conditions and restrictions on and subject to which the license is granted as the Governor considers desirable in the public interest.

36. (1) Any person who establishes a wireless telegraph station or installs or works any apparatus for wireless telegraphy without a license shall be liable to a fine not exceeding one thousand dollars or to imprisonment of either description for a term which may extend to twelve months, and in either case shall be liable to forfeit any apparatus for wireless telegraphy installed or worked without a license.

(2) No proceedings shall be taken against any person under this Part, except with the previous sanction of the Public Prosecutor.

(3) If a Magistrate is satisfied by information on oath that there is reasonable ground for believing that a wireless telegraph station has been established, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any ship within the jurisdiction, without a license, he may grant a search warrant to any police officer to enter and inspect the station, place or ship and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

37. (1) The Governor in Council may make regulations for

(a) Prescribing the form and manner in which applications for licenses under this Part are to be made;

(b) Prescribing the fees payable on the grant of any license;

(c) Regulating the manner in which apparatus for wireless telegraphy on board a merchant ship, whether British or foreign, in the waters of the Colony shall be worked so as to prevent interference with naval signalling or the working of any wireless telegraph station lawfully established, installed or worked in the Colony or the waters thereof, and so as not to interrupt or interfere with the transmission of any wireless messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea;

(d) Prohibiting, except with the special or general permission of the Postmaster-General of the Colony, the working or using of any apparatus for wireless telegraphy on board a merchant ship, whether British or foreign, whilst such ship is in any of the harbours of the Colony.

(e) Prohibiting or regulating, in case at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy on board merchant ships, whether British or foreign, in the waters of the Colony, the use of wireless telegraphy on board such ships while in such waters by such further rules as the Governor sees fit to make and either in all cases or in such cases as are deemed desirable.

(2) No regulations made in respect of the matters described in clauses (c), (d) and (e) shall apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

38. When an applicant for a license proves to the satisfaction of the Governor that the sole object of obtaining the license is to enable him to conduct experiments in wireless telegraphy, a license for that purpose shall be granted, subject to such special terms, conditions and restrictions as the Governor thinks fit, but shall not be subject to any rent or royalty.

39. Every omission or neglect to comply with, and every act done or attempted to be done contrary to this Part or any regulation made thereunder, or in breach of the conditions and restrictions subject to or upon which any license has been issued, shall be deemed to be an offence against this Part, and for every such offence not otherwise specially provided for the offender shall, in addition to the forfeiture of any articles seized, be liable to a fine of five hundred dollars.

40. Any convictions, forfeitures and fines under this Part or any regulations made thereunder may be had and recovered before a District Court.

REGULATIONS.

B In exercise of the powers conferred by section 6 of the Wireless Telegraphy Ordinance, 1912, the Governor in Council is pleased to make the following regulations:—

1. All apparatus for wireless telegraphy on board a merchant ship, whether British or foreign, in the waters of the Colony shall be worked in such a way as not to interfere with (a) Naval signalling, or (b) the working of any wireless telegraphy station lawfully established, installed, or worked in the Colony or the waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. No apparatus for wireless telegraphy on board a merchant ship whether British or foreign shall be worked or used whilst such ship is in any of the harbours of the Colony, except with the special or general permission of the Postmaster-General of the Colony.

3. If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of the wireless telegraphy on board merchant ships whether British or foreign while in the waters of the Colony shall be subject to such further rules as may be made by the Governor from time to time, and such rules may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

4. These Regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

5. The Regulations made on the 30th December, 1918, and published as Notification No. 5 in the *Gazette* of the 3rd January, 1919, are hereby cancelled.

E. C. H. WOLFF,

Clerk of Councils.

SUDAN (ANGLO-EGYPTIAN)

(See also Map Section)

THE immense territory known by the above name is situated immediately to the south of Egypt proper. It formed the locale of the war against the Khalifa in 1896-99, when the late Earl Kitchener overthrew this oppressive rebel and restored the country to a state of security and comparative peace. The area of this territory is 1,014,440 square miles, with a population of 3,400,000. By a convention between the Egyptian and British Governments, signed at Cairo on January 19th, 1899, the administration of the territory south of the 22nd parallel of N. latitude lies in the hands of a Governor-General appointed by Egypt with the assent of Great Britain. All ordinances, laws and regulations are made by the Governor-General in Council.

CONTROL.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. H. Wynne	Director of Posts and Telegraphs	G.P.O., Khartoum
	Chief Engineer, P. & T.	G.P.O., Khartoum
Lieut. R. T. Williams, Royal Corps of Signals	Wireless Engineer	G.P.O., Khartoum
	Assistant Wireless Engineer	G.P.O., Khartoum
Staff-Sergeant G. Stevens, R.E. ..	Wireless Inspector	G.P.O., Khartoum
Staff-Sergeant W. Finding, R.E. ..	Wireless Inspector	G.P.O., Khartoum
Mr. H. A. Woolidge	Wireless Inspector	G.P.O., Khartoum

The wireless inspectors act as superintendents of groups of stations. The other personnel at the stations consist of European foreman engineers where possible in charge of groups of stations, native telegraphmasters and assistants, and native engine drivers and assistants.

ORGANISATION.

The first wireless installation in the Sudan was fitted at Port Sudan in the beginning of 1915, the first three inland stations, Nasser, Malakal, and Gambela, being fitted in the autumn of the same year. Other inland stations have since been added.

All stations have spark transmission, except the new valve station in process of construction at Khartoum, which is designed for a range of 1,500 miles. C.W. reception is at present installed at Malakal and Gambela, and will shortly be fitted at other stations. No arrangements are yet in force for communication with aircraft, or for the transmission of time, weather, hydrographic or press signals or for direction finding.

ADMINISTRATION.

The Regulations affecting Radiotelegraphy in the Sudan are carried out under an Ordinance issued by the Governor-General, and dated at Khartoum, June 4th, 1906. No special regulations have been issued in pursuance of the Ordinance of 1906, and the service is conducted under the Provisions of the International Radiotelegraph Convention, 1912, and the Regulations for its execution. No licenses for private wireless stations have hitherto been issued.

A—Wireless Telegraph Ordinance.

AN ORDINANCE FOR CONSTITUTING WIRELESS TELEGRAPHY A MONOPOLY OF GOVERNMENT. No. 2 of 1906.

A This Ordinance may be cited as "The Wireless Telegraph Ordinance, 1906."

No person shall install or make use of any apparatus for Wireless Telegraphy or transmit or receive messages by means of any such apparatus within the Sudan except the Department of Telegraphs or a duly authorised officer or official of the Sudan Government, unless such person is in possession of a special license in writing from the Governor-General.

SWAZILAND

(See also Map Section)

SITUATED at the south-eastern corner of the Transvaal, this country was originally placed under the administration of the South African Republic. It was, however, not incorporated with it. The British Government now exercises control over this territory. It is under the administration of the High Commissioner for South Africa, assisted by an Assistant Commissioners' Court, situate at Mbabane. It has an area of 6,678 square miles with a population of 133,565.

CONTROL AND ADMINISTRATION.

There is at present no wireless telegraphy or telephony in this country, and no legislation has been made concerning it.

SWEDEN

(See also Map Section)

THE territory of the Kingdom of Sweden includes the eastern and main part of the Scandinavian peninsula. In the extreme north and north-east Norway and Finland are her neighbours. The border on the Finnish frontier is the Torne Elf, a river running from north to south, and falling into the northern end of the Gulf of Bothnia. Norway lies on the west of Sweden; and the Kiel, a chain of highland plateaux and mountains, forms the natural boundary thereof. The Kattegat to the south-west and the Baltic in a southerly and easterly direction separate her from the European continent.

The length of the country is estimated to be 2,500 kilometres from 69° N. to 55° S. latitude, and the size 173,035 square miles. Population, 5,903,762.

Sweden is a constitutional monarchy, with Gustaf V. its reigning head. The Parliament consists of two chambers, and a Cabinet.

CONTROL.

Wireless telegraphy, except in so far as the Navy is concerned, has been placed in the hands of the Kungliga Telegrafstyrelsen, which is a body under the supervision of the Minister of Communication and of which the Radio Bureau forms a special department.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. A. E. Orne	Minister of Communications	Stockholm
Mr. Sven Ludvig Herman Rydin	Director-General (Head of the Kungliga Telegrafstyrelsen)	Do.
Mr. S. Ljungqvist	Chief of Radio Bureau	Do.
Mr. A. S. Litström	Inspector of Wireless Installations	Do.
Mr. J. G. Holmström	Director of Radiotelegraphic Instruction	Do.

The first land station in Sweden was organised and owned by the Swedish Navy. At present six land stations belong to the Royal Swedish Telegraph Administration, two to the Swedish Navy, one to the State Railways, and two stations established on lightships to the Royal Pilot Administration.

No private companies, societies or individuals are permitted to work wireless telegraphy or erect stations without a concession from the Government.

ORGANISATION.

Wireless telegraphy was first employed by the Swedish Navy in 1902, and was at the same time installed on the fortresses near Vaxholm, off Stockholm, on the Baltic coast. Wireless rapidly developed in the Navy, and only a few years after the first trials every ship was equipped. In 1904 a ship

station and shore station were built in Karlskrona, but some years elapsed before wireless was introduced into the Mercantile Marine. In 1910 the s.s. *St. Paul*, of Gothenburg, was fitted with a Marconi installation, and soon afterwards there was much wireless activity amongst Swedish shipowners, so that by the end of 1921 some 200 ships of the Mercantile Marine were carrying wireless.

For ship and shore traffic there are stations at Boden, Göteborg, Hernösand, Karlskrona, Gottland, and at Vaxholm, near Stockholm. An important 50-kilowatt station has been erected near Karlsborg.

Wireless stations for aviation purposes have not yet been established. Meteorological and Press services are sent out, more especially for Swedish ships. Experiments with direction finding stations have been going forward for some time, and a station was opened at Vingå on November 15th last. It is controlled by Göteborg which latter is addressed for requests for position.

LIST OF INSTALLATIONS.

Land stations for public traffic to ships	6
Land stations for restricted public traffic.. .. .	5
Ship stations on Government vessels	49
Ship stations on privately owned vessels	205

ADMINISTRATION.

Wireless telegraphy and telephony are controlled by the Act of August 31st, 1907, the Royal Decree of May 13th, 1921, and the Statute 514 of December 23rd, 1915, concerning the equipment of vessels:—

A—Act of August 31st, 1907.

B—Royal Decree of May 13th, 1921.

C—Extract from Statute 514 of December 23rd, 1915.

D—Form of License.

E—Agreement between Denmark, Norway and Sweden regarding expeditious forwarding of radiotelegrams, (see Norway).

ACT OF AUGUST, 31ST, 1907.

A CONCERNING THE ESTABLISHMENT AND WORKING OF INSTALLATIONS OF RADIOTELEGRAPHY AND RADIO-TELEPHONY.

1. Whosoever desires to establish in Sweden, on land or on board a vessel permanently moored in Swedish waters, an electric installation of radiotelegraphy or radiotelephony for public or private use must apply for an authorisation from the King.

2. The authorisation of the King must likewise be applied for, by any person or persons desiring to establish on board a Swedish vessel other than permanently moored, an installation of the kind referred to in Paragraph 1.

3. The authorisation granted by the King as prescribed in paragraphs 1 and 2, can only be granted for a certain period. In granting the authorisation, His Majesty prescribes under the reservation of private rights, the manner and conditions under which the installation may be established and worked.

4. Whosoever establishes or works, without the authorisation of the King or contrary to the provisions prescribed in the authorisation, an installation within the meaning of the present law, is liable to a fine of from 25 to 1,000 kronen if the penalty incurred by this contravention is not included in the Penal Code.

5. If an installation within the meaning of the present law has been established without the authorisation of the King, or contrary to the provisions prescribed simultaneously with

the authorisation, or if the authorisation has been revoked later by the King, it is the duty of the Governors of Provinces to take the necessary steps to prevent any use being made of the installation.

6. Every fine imposed under the present law reverts to the State. Fines not paid on account of the insolvency of the delinquent are expurgated by terms of imprisonment as prescribed in the Penal Code.

7. The provisions of this law do not apply to State installations.

8. All regulations and all dispositions concerning foreign vessels not permanently moored in Swedish waters, which may be considered necessary for the proper working in Sweden of installations within the meaning of the Act, are made by the King.

ROYAL DECREE OF MAY 13TH, 1921.

B ROYAL DECREE CONCERNING THE WORKING OF RADIOTELEGRAPHIC AND RADIOTELEPHONIC INSTALLATIONS ESTABLISHED ON BOARD FOREIGN VESSELS.

Given at the Palace of Stockholm on May 13th, 1921.

1, Gustave, by the grace of God, King of Sweden, of the Goths and Vendes, make known that on the representation which has been made to us, we hereby repeal the Decree of June 20th, 1913 (No. 125), concerning the working in the Kingdom of radiotelegraphic and radiotelephonic installations established on board foreign vessels, as well as the Decree of September 4th, 1916 (No. 375), concerning the conditions to be observed by those working in Swedish territorial waters, radiotelegraphic or radiotelephonic

installations established on board merchant vessels, which Decrees are replaced henceforward by the following dispositions, decreed on account of the clause inserted at Section 8 of the law of August 31st, 1907 (No. 94), relative to the establishment and working of radio-telegraphic and radiotelephonic installations.

1. Radiotelegraphic or radiotelephonic installations established on board foreign vessels, not stationary in the territorial waters of Sweden are called in the present decree radio installations on board foreign vessels.

2. (i) Radio installations on board foreign vessels must not be used in the vicinity of Swedish ports, without special authorisation to this effect, given by the "Director-General of Telegraphs" in conjunction with the "Chief of the Admiralty," and under reservation of a strict observance of the detailed regulations prescribed by the "Director-General of Telegraphs."

(ii) In the latitude of the territorial waters of Sweden, which are situated at a lesser distance than ten nautical miles of a Swedish coast station the radio installations on board foreign vessels must not be used except in case of distress or in order to communicate to the coast urgently.

(iii) The "Director-General of Telegraphs" must be able, after having arranged to this effect with the "Chief of the Admiralty," to suspend or restrict, except in case of distress, the use of radio installations on board of foreign vessels, even should it be proceeding by other latitudes of the territorial waters of Sweden than those stated in Section 2, para (ii).

3. The Director-General of Swedish Telegraphs has power to issue any necessary regulations concerning the putting out of use of radio installations on board of foreign vessels found in a latitude where conforming to the regulations of Section 2 it is forbidden to use such an installation.

4. The Director-General of Telegraphs will make known to navigators in the way that he judges best the regulations and rules decreed in Section 2, para. (iii), as well as those in Section 3 of the present law, once and for all time, for a certain time, or for some particular case. The said Director will also solicitate the Director of the Administration of Pilotage, the Director-General of Customs, the Departmental Authorities making inspections, and the services subordinate to them respectively, the strict observance of the laws and regulations decreed.

5. When a radio installation on board a foreign vessel is used in the territorial waters of Sweden it must, unless otherwise ordered, conform to the instructions given in the Radio Telegraphic Convention in force with the service rules attached thereto.

6. All infringements of the regulations of the present law or the regulations and orders decreed by the Director-General of Telegraphs in virtue of the same law will be punished by a fine of 25 to 1,000 crowns.

7. The offences shown in Section 6 will be dealt with by the agents of the Civil Administration.

For the competent jurisdiction in the matter of these offences the parties implicated must conform to the rules of Section 328 of the Maritime Code.

The fines imposed on the offenders in this matter will be taken by the Crown. The fines of which the amount would not be paid on account of the insolvency of the delinquent will be commuted in accordance with the penal code.

8. The regulations of Sections 6 and 7 herein described are not applicable to warships.

The present law will enter into force on June 1st, 1921.

In faith of which, etc.

Made at the Palace of Stockholm on May 13th, 1921.

(Signed)

(L.S.)

(Witnessed)

(Minister of Communications.)

EXTRACT FROM SWEDISH STATUTES, 1915.

No. 514 OF 23RD DECEMBER.

Fifth Chapter.

Equipment of Vessels.

I.—Wireless Telegraph Installation.

ART. 56.

Vessels which must be provided with wireless installation.—Vessels which are used for voyages between different countries or between a country and any of its colonies, possessions or protectorates, shall be equipped with wireless telegraph installation; provided, however—

That such installation shall not be required if the vessel has fewer than 50 persons on board or if although the number on board is 50 or over, this is exclusively due to the fact that the master, by reason of sickness among the crew or through other compelling, unforeseen circumstances, has been obliged to supplement the crew, or has saved persons in distress at sea, or by reason of obligation, according to law, has taken with him seamen or other persons;

And that the Board of Trade may, on application, grant exemption from the obligation of having such installation, if the Board, in view of the route or other circumstances concerning the voyage, finds that such installation is not necessary and if such application concerns:—

(a) Vessels which do not go out to a distance of more than 150 nautical miles from the nearest coast;

(b) Vessels which only in exceptional cases and incidentally have 50 persons or more on board for the reason that they take stowers or stowage labourers with them on a certain part of the voyage, and which on the one hand do not sail from one continent to another, and on the other hand are, during the said part of the voyage, between 30° northern and 30° southern latitude; or

(c) Sailing vessels which are of rather primitive construction and which it is practically impossible to equip with wireless installation.

ART. 57.

Concession and classes of vessels.—Concerning H.M.'s permission to carry out such installation as referred to in Art. 56, separate enactments have been issued.

In sanctioning such installation as aforesaid the King will fix the class in which the vessel shall be classified, in accordance with the nature of the attendance of the wireless telegraph station.

ART. 58.

Range of the installation.—The wireless installation shall be sufficiently powerful to be able to transmit in day-time, under normal conditions, signals which can be clearly distinguished at a distance of at least 100 nautical miles from the vessel.

ART. 59.

Spare installation.—Vessels which are to be equipped with wireless installation shall have a spare wireless plant. This shall be placed wholly and entirely in the upper parts of the vessel, as high up as possible, and all its parts shall be fitted up so as to be protected as much as possible.

The spare plant shall have a source of power which is exclusively intended for the spare plant, and which can be brought into action most speedily.

The source of power referred to in the second paragraph of this article shall be capable of acting for at least six hours with a minimum range of 80 nautical miles in the case of vessels, for which uninterrupted attendance of the wireless installation shall have been provided, and of 50 nautical miles in the case of any other vessel.

If the main installation meets the requirements of the first and second paragraphs hereof as regards the spare plant the spare installation shall not be required.

SWITZERLAND

(See also Map Section)

THE Swiss Confederation is made up of the union of twenty-five separate political entities, or republics, organised into twenty-two cantons.

The area comprises 15,976 square miles, the population (according to the census of December 1st, 1920) numbers 3,880,320. The country extends from 45° 0' to 48° 0' north latitude, its longitude lying between 5° 0' and 11° 0' east of Greenwich. The length from north to south is 137 miles, the width from east to west 216 miles; the furthest points on its boundary are 223 miles apart.

Supreme authority is exercised by the Federal Assembly, which consists of two Councils. Both Chambers unite to elect the Federal Assembly, which wields the supreme authority and higher executive of the Confederation.

CONTROL.

Wireless telegraphy in Switzerland is controlled by the Department of Posts, Telegraphs and Railways, but there is no special branch of the department devoted thereto.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Dr. R. Haab	Head of the Department of Posts, Telegraphs and Railways	Berne
Dr. R. Furrer	Director-General of Post, Telegraphs and Telephones ..	Berne
M. Hauser	Assistant to the Director-General	Berne
A. Muri	Chef de la Division Technique	Berne
Dr. M. Baur	Chef de la Section "Controle et Comptabilité"	Berne
E. Nussbaum	Inspector of Telegraphs	Berne

Wireless telegraphy is a State monopoly, based on the general Federal Law affecting telegraphs and telephones, of December 16th, 1907, of which we print below the apposite clauses.

Licenses are, however, granted for receiving stations only, available for a limited period, where these are to be used solely for the reception of time, weather signals, and general and technical instruction and scientific researches. We append the form of such contracts.

ORGANISATION.

In order to carry out a clause of the International Conference of October 25th, 1913, relative to an international time association, an Order in Council of September 14th, 1920, definitely revoked the prohibition, which had been in force during the war, and the installations have been returned to their owners, and starting with August 1st, 1916, the International Time Signal radiated from the Eiffel Tower is on working days telephonically transmitted by the Telegraph and Telephone Department at Berne to subscribers residing in Switzerland. (See Decree of the Federal Council dated July 21st, 1916.)

The Federal Council, on March 11th, 1921, granted a concession to Marconi's Wireless Telegraph Co. to establish and work an up-to-date wireless station with valve transmission of 25 kw. This station is worked by the "Marconi Radio Station, S.A.," constituted as a Swiss Société Anonyme for the purpose. It is situated near the village of Münchenbuchsee 7.35 km. north of Berne, at an altitude of 580 m. The geographical position is lat. 47° 0' 52" long. 7° 26' 37" E. of Greenwich. The station has been opened for international public service on April 12th, 1922, and works at high speed on a wavelength of 3,400.

A new law relating to the exploitation of radiotelegraphy and telephony was presented to the Federal Assembly on June 6th, 1921, and will probably become law on January 1st, 1923.

The Federal Postal, Telegraph and Railways Department has put forward a request concerning the law of concession, for the establishment and exploitation of radiotelegraphic and telephonic services for the Aerodromes of Genève and Lausanne and for the organisation of a "broadcasting service."

ADMINISTRATION.

The texts of the ruling Laws and Regulations reprinted here are:—

- A**—The Federal Telegraph and Telephone Law of 1907.
- B**—Extract from the Legal Resolutions governing the concession to Radiotelegraphic Receiving Stations.
- C**—License for Time, Weather and Experimental Receiving Stations.
- D**—Authorisation to hold a conference upon Radiotelegraphy with accompanying experiments demonstrating the reception of radiotelegraphic messages.
- E**—Federal Decree establishing Telephonic instead of Wireless Reception of International Time Signals.

FEDERAL LAW REGULATING THE ORGANISATION OF TELEGRAPHIC AND TELEPHONIC ADMINISTRATION.

(Dated December 16th, 1907.)

CHAPTER I.

A ART. 1.—The right to establish and exploit any form of electrical telegraph and telephone in Switzerland, or to issue licenses for any such apparatus is vested solely in the Confederation.

ART. 2.—Localities whose commercial, industrial, or political status warrants the establishment of telegraphic or telephonic stations shall contribute their just quota towards the expense of such establishment.

Subject to appeal to the Federal Council the Telegraph and Telephone Administration shall decide the matter of installation and extent of the facilities granted. The Federal Council shall specify the rules governing the subvention and guarantees to be given by communities and individuals.

ART. 3.—The right of usage of such facilities shall be common to all. No special privilege with regard to fees or priority of transmission or reception shall be granted to any.

Nevertheless, official communications of the Federal and Canton authorities, as well as messages concerning the Service of Posts, Telegraphs, Telephones, and Railways shall have priority over those of individuals.

ART. 4.—The Supreme Direction of Telegraphic and Telephonic Administration shall belong to the Federal Council.

All regulations affecting this branch of service shall be issued by the Federal Council, so far as the latter shall not have delegated its authority to the Postal, Telegraphic, and Railway Departments or to the responsible officials thereof.

ART. 5.—The Federal Council shall conduct all negotiations concerning general telegraphic and telephonic agreements abroad.

Ratification of such agreements must be made by the Federal Assembly.

The Federal Council may, however, finally ratify agreements concluded with bordering countries on the basis of the general conventions affecting telegraphy and telephony.

ART. 6.—The Federal Council shall appoint all telegraphic and telephonic officials and employees. The nomination of individual employees or fixed classes of employees may however be delegated to the Postal and Railway Department or to the Managing Director of Telegraphs and Telephones.

ART. 7.—The immediate superintendence of all the administration of telegraphs and telephones is delegated to the Postal and Railway Department which is moreover entrusted with the necessary executive power.

CHAPTER II.

This chapter contains Articles 8, 9, and 10, which enumerate the classes of chief officials.

CHAPTER III.

This chapter is concerned with the organisation of telegraphic and telephonic zones and the offices and officials to be established in connection therewith. It contains Articles 11 to 16 inclusive.

CHAPTER IV.

Herein are laid down (in Article 17) the classification and maximum salaries of chief officials.

CHAPTER V.

In this chapter we find Articles 18 to 22 embodying the general rules applying to the nomination basis of appointment and responsibilities of the various officials.

CHAPTER VI.

This chapter covers Articles 23 and 24 and concerns itself with offences and penalties. It also includes Article 25 enumerating the previous decrees abolished by this law and Article 26 the formal Direction of Issue.

Extract from the Legal Resolutions governing the concessions to Radiotelegraphic receiving stations.

1.—FEDERAL CONSTITUTION.

ART. 36.—AI. I.—Throughout the whole of Switzerland, the posts and telegraphs are under the control of the Federal Government.

AI. IV.—The inviolability of the secrecy of letters and telegrams is guaranteed.

2.—INTERNATIONAL TELEGRAPHIC CONVENTION OF ST. PETERSBURG (1875).

ART. 2.—They (the principal contracting parties) engage to make all necessary arrangements to ensure the secrecy of correspondence and their proper despatch.

3.—FEDERAL LAW OF JUNE 22ND, 1877, CONCERNING THE TELEGRAPHIC CORRESPONDENCE IN THE INTERIOR OF SWITZERLAND.

ART. 2.—The Federal administration accepts no responsibility whatever on the subject of telegraphic correspondence. On the contrary, it will take all necessary precautions to ensure and accelerate the service and to safeguard the secrecy of the correspondence.

4.—FEDERAL LAW RELATING TO TELEPHONES of the 27th June, 1889, with the alterations made to them by the Federal law of 7th December, 1894, and by the Federal order of 25th December, 1914.

ART. 21.—The granting of a concession does not include any kind of right in that which concerns the use of another's property, of that of the State, of communes, or of private indi-

viduals; the concessionaire must himself procure the authorisation necessary to it from the owners, and come to an agreement directly with them on the questions of an eventual indemnity.

ART. 22.—A concession is only accorded when its execution does not prejudice either the actual exploitation or the future development of the public telegraph and telephone services. These concessions may be revoked at any time without indemnity.

5.—FEDERAL LAW OF THE 16TH DECEMBER, 1907, RELATING TO THE ORGANISATION AND ADMINISTRATION OF TELEGRAPHS AND TELEPHONES.

ART. 1.—The right of establishing and of exploiting electric telegraphs and telephonic installations in Switzerland, or of granting concessions to this effect, belongs exclusively to the Confederation.

ART. 23.—In virtue of the rights of the telegraph and telephones, it is prohibited—

(a) To establish and exploit, by borrowing another's property, any installation, either telegraphic or telephonic, or any other communication with low current, without a concession having been granted to this effect by the competent federal authority.

(This resolution refers, it is true, to such installations of low current linked together by a conductor. In any case, and in virtue of Article 1—above-mentioned—of the Federal Law of the 15th of December, 1907, it applies by analogy to the radiotelegraphic installations, that the antennæ borrowed or not from the property of a third party.)

(b) To utilise any electric installation of low current for any other purpose than that set forth in the concession.

(c) To graft other wires or other apparatus on those of the federal administration without its consent.

ART. 24.—AI. I.—The violations of the rights of telegraphs and telephones are punished by a fine of from 1 to 50 francs. In the case of a repetition of this offence, the fine may amount to 2,000 francs.

SPECIAL RESOLUTIONS.

As to the concession for receiving stations for time signals and meteorological bulletins and experimental and trial stations.

1. The authorisation to establish a radiotelegraphic or radiotelephonic station for the receipt of time signals and meteorological bulletins, and for experiments and trials of a provisional character, is only accorded conventionally.

2.—The administration may, at any time, cancel a granted concession or cause to discontinue the use of a station by the application of suitable measure without having to pay any indemnity whatever or to make known its reason for such decision.

3. The administration reserves the right to decide whether any concession may be granted or not.

4. No authorised station may be transferred to a third party without the written consent of the Director-General of Telegraphs.

5. The concessionaire must conform to all rules which the authorities may lay down in matters concerning wireless telegraphy or telephony.

6. The granted installation must at all times and in all its parts be accessible to the representatives of the administration of telegraphs and telephones entrusted with the control.

7. The installation will serve only for the purpose specified in the concession. All other uses shall be considered as violation of the rights.

Such will be considered culpable of infraction of the rights as—

Whoever exchanges with transmission stations in Switzerland or abroad any correspondence takes place of a personal or private character.

Whoever takes notes, in whatever manner, of the correspondence collected by his station and destined for a third party, or whoever makes known to a third party the meaning or the existence of these communications.

Whoever communicates to a third party, either out of politeness or for financial gain, any messages having a public signification, and of which the receipt is authorised by the act of concession for the personal use of the concessionaire.

Whoever, without having been authorised by the Administration, transfers the conceded installation to any other place, or makes use of public demonstrative experiments, or for a commercial purpose, etc.

8. The use of registering receivers of all kinds is forbidden (Morse rapid, parlograph, syphon, recorder, ordinary Morse registrar, etc.).

9. The concessionaire must notify the administration of all modifications of whatever importance which may be introduced later into the conceded installation.

When it is a question of experimental and trial stations, the concessionaire just present a report on any modifications as have been introduced at least once a year.

The following, among others, are modifications which are considered important—

Each modification or displacement of the antennæ (an immediate notification indispensable), the substitution, in view of the improvement of the reception, of crystal or electrolytic detectors by the Andiaon system, or amplifiers; the increase in numbers of the stages of amplification; the introduction indirect in place of direct reception; the use of any other device, either by reaction or by means of a heterodyne, for the receipt of sustained waves; the modification of the station in view of extending the interval of wavelengths to be received, etc.

10. The establishment of aerial antennæ in the neighbourhood of installations of high current is forbidden.

11. When it concerns the establishment of antennæ borrowing public property, or situated in the neighbourhood of installations of low current belonging to the State (cross or parallel), the installation must be made by an expert, and in conformity with the orders of the Federal Council on the establishment of electrical installations of low current, and with the special orders issued by the administration of telegraphs and telephones.

12. The aerial antennæ must, if possible, be established out of the hearing of the other installations of low current.

13. The length of the wire used, including the vertical distance between the point of union of the horizontal surface and the terminal of the receiver, shall not as a rule exceed 70 metres when it concerns antennæ of one wire and 100 metres in the case of a horizontal surface of two or more wires.

14. The administration does not incur, by reason of the concession, any kind of responsibility whatever towards the concessionaire or any third parties.

15. The concessionaire is responsible to the administration of telegraphs and telephones for all damage which may be caused by the non-observation of the rules set forth in the present concession.

16. The concessionaire must pay the administration the following fees—

(a) A single fee of 5 francs for the examination of his petition and for the drawing up of the concession.

(b) An annual and indivisible tax of 10 francs concurrent with the civil year.

CONCESSION.

FOR RADIOTELEGRAPHIC RECEIVING STATION.

C In virtue of the legal resolutions relating to the subject (see Appendix) and on the basis of the application presented, it is accorded to

M in the canton of the concession for the installation and use of a radiotelegraphic receiving station with antennæ in the building.

The concession is subject to the rules and regulations which follow—

GENERAL RESOLUTIONS.

1. The authorisation of installation and of exploitation of this station is of a provisional nature, and it is only granted conventionally.

2. The present concession may be cancelled at any time and on whatever date without the Federal authorities being called upon to pay any indemnity, nor obliged to state their motives for so doing. In the case of removal the installation must be taken down at the expense of the concessionaire within the period of eight days to start from the period fixed for the expiration of the concession.

3. In special circumstances the Federal authority may, without paying indemnity, and for an unlimited period, confiscate the entire installation.

4. The conceded installation may not in any way impede the exploitation and the development of the telegraphic and telephonic network of the State and the railway companies.

5. The conceded installation must, at all times, and in all its parts, be accessible to the representatives of the Administration of telegraphs and telephones entrusted with the control.

6. The administration does not incur, in virtue of the concession, any kind of responsibility whatever towards the concessionaire or whomsoever it may be.

7. On the other hand, the concessionaire will be held responsible for all damage which may be caused to the Federal administration by the non-observance of the regulations of the present concession.

8. The grant of a concession does not carry with it any kind of rights or privileges in what concerns the property of another party, whether the State, of the communes, or of private individuals; the concessionaire must therefore himself solicit the required authorisation from the owners and come to an agreement with them on the subject of an eventual indemnity.

9. The concessionaire must conform to all the rules and regulations which the Federal authorities may issue in respect of radioelectric telegraphy and telephony.

RULES RELATING TO THE USE OF RECEIVING STATIONS.

10. The conceded station is registered as and can only be made use of for All other use will be held as a violation of the rights of the Confederation.

11. Such will be found culpable of infraction of the rights—

Whoever exchanges correspondence of a personal or private nature with transmission stations situated in Switzerland or abroad.

Whoever takes notes, in whatever manner, of correspondence collected by his station and destined for a third party, or whoever makes known to a third party the contents, the meaning, or the existence of these communications.

Whoever communicates to a third party, either gratuitously or for financial purposes, radioelectric messages of a public nature, and the reception of which is authorised for the personal use of the concessionaire by the act of concession.

Whoever, without being authorised by the administration of telegraphs and telephones, transfers elsewhere the conceded installation, or uses it for public demonstrative experiments or for commercial advertisement purposes, etc.

12. The use of registering receivers of all kinds is prohibited (Morse apparatus, parlographs, syphon recorder, etc.).

13. The concessionaire shall notify the administration of all modifications of any importance which may be introduced later into the conceded installation.

When it concerns experimental and trial stations, the concessionaire must present, at least once a year, a report on the modifications introduced.

The following, with others, are considered as modifications of some importance—

Each modification or displacement of the antennae (immediate notification indispensable), the substitution, in view of the improvement of the reception, of crystal or electrolytic detectors by the devices Audion, or by amplifiers, the augmentation of the number of the stages of amplification.

The introduction of indirect in the place and stead of the direct reception, the use of any other device, either by reaction or by means of heterodyne, for the reception of sustained waves; the modification of the station relating to the extension of the interval of the wavelengths to be received, etc.

14. The antennae

15. The concessionaire must pay the following fees to the Administration—

(a) A sole fee of 5 francs for the examination of the application and for the drawing up of the act of concession.

(b) An annual and indivisible tax of 10 francs concurrent with the civil year.

Berne, the 192 .

The General Director of Telegraphs.

The undersigned, after having become acquainted with the rules and regulations above enumerated, declare willing to accept and to conform to same.

The 192 .

D Authorisation to hold a conference upon radiotelegraphy, with accompanying experiments demonstrating the reception of radiotelegraphic messages.

Mr.
(Profession)
of
received, on the following conditions, the
authorisation of holding a conference of radio-

telegraphy with accompanying experiments demonstrating the receipt of radiotelegraphic messages.

The conference will take place
on the 192
at o'clock, in (address).
Entrance paying gratis. Strike out what is not required.

1. The demonstrator must make, at the opening of the conference, the following declaration to the audience—

Radiotelegraphy comes under the rights of the telegraphic system. The monopoly of the Confederation in telegraphic affairs is foreseen by Article 36 of the Federal Constitution, and by Article 1 of the Federal Laws of December 16th, 1907, on the organisation of the administration of telegraphs and telephones. Paragraph 1 of Article 36 of the Federal constitution is as follows: "In all Switzerland the posts and telegraphs are under the Federal jurisdiction." Paragraph 4 says: "The inviolability of the secrecy of letters and telegrams is guaranteed."

Article 1 of the Federal Law of the 16th December, 1907, stipulates: "The right of establishing and of exploiting electric telegraphs and telephonic installations in Switzerland, or of according concessions to this effect, belongs exclusively to the Confederation."

By Article 2 of the International Telegraphic Convention at St. Petersburg (1875), the principal contracting parties are engaged "to take all necessary precautions to ensure the secrecy of the correspondence and their proper dispatch."

The Article 2 of the Federal Laws concerning the telegraphic correspondence within the interior of the country reads as follows: "The Federal administrator accepts no responsibility regarding telegraphic correspondence."

On the other hand it will take all necessary measures to assure and accelerate the service and to safeguard the secrecy of the correspondence.

In the interest of the secrecy of radiotelegraphic correspondence, the conferences on radiotelegraphy accompanied by experiments showing the reception of radiotelegraphic messages ought to be announced to the competent authority. Thenceforward such conferences can only be held by authority of the Director-General of Telegraphs.

2. An official of the district administration of telegraphs concerned, or of the first or second-class telegraph office of the district, will attend the conference and assure himself that the reception of the radiotelegraphic messages is carried out within the prescribed limits, that is to say, within the scope of the regulations of the authority granted. This official will be exempt from payment of any entrance fee.

3. It is prohibited, both to the demonstrator and his assistants, to take note of the radiotelegraphic messages heard in the course of the conference, and to communicate their meaning to third parties.

4. The use of tape machines of any kind, including the so-called parlograph apparatus, is prohibited.

5. The use of megaphones for the demonstrative reception of radiotelegraphic messages is likewise prohibited on principle. Exceptions to this rule may be authorised in respect to the reception of messages of a public character, such as time signals, meteorological bulletins, and the articles of newspaper for the purposes of advertisement. The audience must be notified of the public character of these communications

and messages. In this case also nobody is authorised to take notes and to communicate to third parties the tenor of messages so received.

6. The authority given in respect to a conference accompanied by experiments demonstrating the reception of radiotelegraphic messages is only valid for a single sitting. Such authority, including the first, is subject to a tax of 10 francs when a charge for admission is made.

7. Only the receiving apparatus of a conceded station may be used for demonstrating the reception of radio telegraphic messages. The prescriptions of the concession granted for the said station are reserved.

Berne, the

192

The Director-General of Telegraphs.

TELEPHONIC TIME SIGNAL SERVICE.
SECTION A.

E Decree of the Federal Council dated July 21st, 1916.

The Swiss Federal Council, acting on the suggestion of its Postal and Railway Department, and in view of the Federal decision of March 27th, 1914, decrees:

1. That the international radiotelegraphic time signal radiated daily at 10.56 and at 11 o'clock (H.E.C.) from the Paris Observatory by the Eiffel Tower Station, shall be—during working days—retransmitted telephonically by the Administration of Swiss Telegraphs and Telephones at Berne.

2. Any regular telephone subscriber may take up a subscription to the telephonic time signal, arranging therefor with his telephone exchange.

3. Subscriptions are monthly or annual, and are valid for the civil month or civil year.

The rates of subscription are:

(a) Fr.2.50 per month, or part of a month.

(b) Fr.25 per year.

For ten months at least they must be paid in advance.

4. Over and above the possibility of regular subscriptions, telephone subscribers may arrange to be supplied with odd time-service messages on such circuits as receive them. Each separate message will be charged for at the rate of 20 centimes, and this fee will be included, with ordinary conversation charges, in the monthly account.

5. The Administrator of Telegraphs and Telephones will accept no responsibility with regard to any irregular working of the Telephonic Time-Signal Service; nevertheless every endeavour will be made to assure and develop the service.

6. If any interruption in telephonic transmission of the time-signal last for more than seven consecutive days, without this arising from any fault on the part of the subscriber, the subscription fee will be refunded proportionately to the duration of the interruption.

7. Every effort shall be made to carry this edict into effect on and from the 1st August, 1916.

The Postal and Railway Department shall take steps to carry this out.

Dated Berne, 21st July, 1916.

SECTION B.

Method of Administration.

1. Every telephone subscriber who desires to subscribe to the Telephonic Time-Signal Service must address a written request to his telephone exchange showing exactly what kind of subscription he desires to take up (see Article 4 of this section, paragraphs (a) to (c)).

2. The telephone exchange which receives an application for such a subscription may, under this rule, accede to the application immediately.

On the reception of a first request for a subscription, the Telephone Exchange puts itself immediately in touch either with the Central Station through whose intermediary the time signal will be sent, or with its own local centre.

3. The originals of all applications for subscription must be sent to the Chief Office, through the intermediary of the local centres.

4. (a) The fees for annual subscriptions must be paid in advance for December, together with the half-yearly fees for the ordinary telephone service.

For periods of less than ten months, starting with the first day of the subscription and until the end of the year, the tax is collected on the basis of the tariff applicable to monthly subscriptions.

An annual subscription becomes automatically renewed from year to year, and may be cancelled at any time upon giving eight days' notice. If, however, it has not run for at least ten months, counting from the beginning of the year up to the date of cancellation, the rate of tax applicable is that of a monthly subscription.

(b) Fees for monthly subscriptions for a settled period (temporary subscriptions) are payable in advance, and for the whole duration of the subscription.

In default of advice to the contrary on the part of the subscriber, his subscription is considered as cancelled on the expiry of the agreed period.

(c) Monthly subscriptions of indeterminate duration are renewed automatically month by month. They may be cancelled at the end of a month by notice given at least eight days in advance; the subscription fees being payable monthly and in advance.

(d) Requests for reception of odd time-service messages are only granted in the case of lines of some importance, and on condition that they are made at latest by 10.50 a.m. Applicants are rung up at 10.55 a.m.

Applications are noted by entering the number of the subscriber on tickets specially prepared for this purpose. These tickets serve as the basis for the rendering of accounts.

When it has not been possible to attend to an application, because the subscriber's line was engaged his enquiry is charged as a local conversation. Fees for odd time-signal messages are charged for at the end of each month on the same invoice as conversation charges.

5. Subscription rates and charges made for odd time-signal messages come under subsection 2(c) of the accounts for messages, and must in consequence be entered, duly classified (see Article 4 of section (a) above) on Form No. 600 under "Other Receipts."

6. The commission allowed to exchange proprietors attached to central stations of Class III, and of intermediary stations, who have to co-operate in the telephonic time-service amounts to 25 per cent. on receipts. This commission is taken into consideration when the annual telephone accounts are adjusted.

Time-service communications in transit should be recorded in the same way as ordinary conversations in transit.

7. When the time-signal message is transmitted to an intermediary station linked up with a central station of Class III, the latter has only a right to a commission of 2 cents per communication in transit, and the commission of 25 per cent. on the message is allotted to the proprietor of the intermediary station.

SYRIA

(See also Map Section)

BY the Treaty of Peace with Turkey (August 10th, 1920), Syria became an independent State, at present under a High Commissioner. It is situated on the Mediterranean, and bordered by Palestine in the south, Mesopotamia on the east, and the Baghdad railway between Chobaubeg and Nisibin.

The area of the state is about 60,000 square miles with a population of somewhat less than 3,000,000.

CONTROL AND ORGANISATION.

Up to the time of going to press we have been unable to obtain any information relating to wireless in Syria.

TANGANYIKA TERRITORY

Late GERMAN EAST AFRICA.

(See also Map Section)

THE territory of the late German East Africa, conquered in 1918, was divided between the British and Belgians. The British area became Tanganyika territory. It is administered by a Governor, assisted by an Executive Council.

The area of the territory is about 365,000 square miles, with a population of 4,002,447.

CONTROL AND ORGANISATION.

There are at present no wireless stations in the territory, nor has any legislation be formulated for its control.

TIMOR (PORTUGUESE)

(See also Map Section)

SITUATED in the Malay Archipelago, Portuguese Timor consists of the Seastern portion of the island of that name. The island was, in 1859, divided between Portugal and Holland. The population is 377,815.

CONTROL AND ORGANISATION.

Up to the time of going to press we have been unable to obtain any special information relating to wireless in Timor. A reference however, is to be found under Portugal.

TOGOLAND

(See also Map Section)

Including : British Togoland, French Togoland.

SITUATED between the Gold Coast Colony on the west, and French Dahomey on the east, Togoland was formerly a German colony. On its surrender it was divided between Great Britain and France.

The area of British Togoland is 12,600 square miles, and is provisionally, for administrative purposes, attached to the Gold Coast Colony.

French Togoland has an area of 21,200 square miles, and the combined population is estimated at 1,032,125.

CONTROL AND ORGANISATION.

Up to the time of going to press we have been unable to obtain any special information relating to wireless in Togoland. References are, however, to be found under Gold Coast Colony and France and Algeria.

TONGA ISLANDS

(See under PACIFIC ISLANDS.)

TRIPOLITANA AND CYRENAICA

(See also Map Section)

KNO**W**N generally as Italian Libia, these Italian possessions lie along the coast of Africa between Tunis in the west, and Egypt on the east. For administrative purposes this territory is divided up into the two independent districts of Tripolitana and Cyrenaica, each under a Governor.

The combined area of the territory is estimated at 406,000 square miles with a population of about 1,000,000.

CONTROL AND ORGANISATION.

Up to the time of going to press we have been unable to obtain any special information relating to wireless in Italian Libia. A reference, however, is to be found under Italy.

TUNIS (AFRIKIYA)

(See also Map Section)

TUNIS is a protectorate of France, under a Resident General, with Sidi Mohamed En Naccur Bacha Bey at the head of the State. It is situated on the Mediterranean, and bounded on the west by the Algerian province of Constantine, and on the south by the Sahara and Libya.

Its area is about 50,000 square miles and has a population of 156,115.

CONTROL AND ORGANISATION.

Up to the time of going to press we have been unable to obtain any special information relating to wireless in Tunis. A reference however, is to be found under France and Algeria.

TURKEY

(See also Map Section)

THE Turkish Empire has suffered a succession of rapid changes during the past few years, and stable conditions are not even yet sufficiently established to give a concise demarkation of the limits of its territory.

After the war of 1914-1919 Mohammed VI became the reigning Sultan, but the Turkish Nationalist movement has since again changed both the map and the Government.

CONTROL.

OFFICIAL CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. Réfik Halid ..	Director-General of Posts, Telegraphs and Telephones	Constantinople

ORGANISATION.

Up to the time of going to press we have not been able to obtain any information relative to the organisation and administration of wireless in Turkey.

UGANDA PROTECTORATE

(See also Map Section)

UGANDA came under British dominion in 1890, and a portion of the territories was for a time administered by the Imperial British East African Company. The northern boundary is limited by the Sudan, the eastern by Kenya Colony, the western by the Belgian Congo, and the southern by Tanganyikan territory. The population is estimated at 3,071,608, and the area of the Protectorate 110,300 square miles.

The administration is conducted by a Governor and Commander-in-Chief, assisted by an Executive and Legislative Council.

CONTROL.

OFFICIAL CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. W. G. Tucker ..	Telegraph Engineer	Entebbe
Mr. R. Rabson ..	Assistant Telegraph Engineer	Do.

ADMINISTRATION.

Wireless telegraphy is administered under the following Ordinance :—

ORDINANCE.

1. This Ordinance may be cited as "The Wireless Telegraphs Ordinance, 1908."

2. No person shall use or establish any apparatus or installation for the purpose of operating wireless telegraphs without a license from the Governor.

Any person contravening the terms of this section shall be liable on conviction to a fine not exceeding Rs. 1,500 or imprisonment

of either kind for a term not exceeding twelve months, and any apparatus or installation in respect of which an offence under this section is committed may be forfeited and sold or disposed of as the Governor may direct.

3. It shall be lawful for the Governor from time to time by rules to prescribe the terms and conditions upon which licenses to use or establish apparatus or installations for the purpose of operating wireless telegraphs may be granted.

UNITED STATES OF AMERICA

(See also Map Section)

Including : The States of Alabama, Arizona, Arkansas, California, Colorado, Connecticut, Delaware, District of Columbia, Florida, Georgia, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, New York State, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, Washington, West Virginia, Wisconsin, Wyoming, and the Territory of Alaska.

THE declaration of independence of the States of the American Union was adopted by Congress. July 4th, 1776. The Constitution of September 17th, 1787, lays down the basis of government under which (modified by amendments in 1787; 1791, 1798, 1804, 1865, 1868, 1870, 1913, 1919 and 1920) this great and powerful Republic is now governed.

The Union comprises 48 STATES, each of which is provided with a Legislature of two House, a Governor at the head of the Executive and a judicial system. The district of Columbia (D.C.) is the seat of the Federal Government, and was provided by the State of Maryland for this purpose in 1791. It is co-extensive with the City of Washington, and embraces an area of 60 miles. The TERRITORIES of Alaska and Hawaii are governed by local Legislatures, whose Acts may be modified or annulled by Congress. The grand total of the superficies governed under the U.S.A. Constitution amounts to 3,574,658 square miles, with a population of 105,710,620.

N.B.—There are, moreover, DEPENDENCIES administered by the U.S.A. Government. Their rule is undertaken by a Governor and staff appointed by the President. Porto Rico and the Philippines belong to this division, although provided with Representative Government. Guam, in the Marianne Archipelago (Pacific Ocean), and the Samoan Islands are pure Dependencies administered by the U.S. Navy Department. Wireless in all these instances is controlled by the Navy Department in war time, but in peace time the radio stations of Porto Rico, Hawaii and Alaska are under the jurisdiction of the Department of Commerce, and all commercial transmitting radio stations operated in these dependencies must be licensed by this Department, and the operators of such stations must also be licensed.

The "CANAL ZONE" on the Isthmus of Panama ranks as a Dependency, but it has been judged best to print the wireless particulars relating thereto separately under the heading "Panama—Canal Zone."

CONTROL.

The Congress of the United States has delegated to the Department of Commerce the duty of the enforcement of the Wireless Communication Laws and the International Radio-telegraph Convention, and the work is handled through the Bureau of Navigation, Washington.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Officials.	Title.	Address.
<i>Navy—</i> Capt. Henry J. Ziegemeier	Director of Naval Communications ..	Washington
<i>Army—</i> Maj.-Gen. Sir G. O. Squier, K.C.M.G ..	Chief Signal Officer	Washington
<i>Commerce—</i> Mr. Herbert Hoover	Secretary of Commerce	Washington
Mr. C. H. Huston	Assistant Secretary of Commerce ..	Washington
Mr. D. B. Carson	Commissioner of Navigation	Washington
Mr. A. J. Tyter	Deputy Commissioner of Navigation ..	Washington
Mr. W. D. Terrell	Chief Radio Inspector	Washington

There are, in addition, twenty-one inspectors and assistant inspectors, stationed at various districts established by the Bureau of Navigation.

ORGANISATION.

In September and October, 1899, Senatore (then Mr.) Marconi installed a radio station for the purpose of reporting the International yacht races between the yachts *Shamrock* and *Columbia*. The *New York Herald* of October 1st, 1899, tells how wireless was used for sending bulletins from the steamships *Ponce* and *Grande Duchesse*, which followed the contending yachts.

According to the most reliable information obtainable, the first regularly operated radio stations in the United States were at Siasconset (Nantucket), Mass., and on Nantucket Shoals Lightship No. 66, work on which was started early in the summer of 1901. These stations were not experimental, or demonstrational, or temporary stations, but were erected for the particular purpose of providing for the regular daily transmission of ship news, and for regular communication and exchange of messages with vessels equipped with similar apparatus. They were owned and operated by the *New York Herald*, and were equipped with Marconi apparatus purchased from, and installed by, the English Marconi Company.

The *New York Herald* of August 17th, 1901, contained an account of how the first radiotelegraphic station at Siasconset got into communication by wireless with the Nantucket Shoals Lightship. The latter, on August 16th, received from the s.s. *Lucania*, of the Cunard Line, at a distance of 72 miles, the first connected wireless message ever radiated to the United States from an approaching vessel. That message ran, "All well on board."

In 1899 (the same year as that of the first wirelessly reported yacht races) the matter of establishing radio services in the TERRITORY of HAWAII was receiving official attention. It was not until March 1st, 1901, however, that radio stations on the island were opened for business, the apparatus being supplied with power by Marconi induction coils. On October 15th, 1908, a 10-kw. station was erected at Kahuku Point, in Oahu (Hawaii) and at that time this was probably the most powerful station on the Pacific. Uninterrupted night communication was established with the wireless station on Telegraph Hill, San Francisco, California, a distance of 2,100 miles. This constituted the first direct radio communication between Hawaii and the U.S.A. On April 1st, 1915, a wireless service was established between the station at Wahiawa, Oahu (Hawaii), and the United States Naval Station at Tuluila, Samoa (2,400 miles distant). A composite system of equipment was used, with a transformer input of 6-kw., and a reliable nightly service has been maintained ever since.

In the TERRITORY of ALASKA radio communication takes the place of wired telegraph and telephone services. The large fish-canning companies rely almost exclusively upon their radio installations for communication between their canning plants, and for the maintenance of touch with their vessels engaged in this industry. Static interference (or atmospherics) is practically unknown there.

The number of wireless stations (excluding amateur installations) licensed in the United States at June 30th, 1922, totalled 16,704, of which 7 are in Hawaii, 52 in Alaska, 21 in the Philippines, and 2,773 are ship stations. On June 30th, 1922, there were 382 stations broadcasting music, concerts, market reports and similar matter.

At June 30th, 1922, the *Government* shore wireless stations numbered 135, of which 157 (including D.F. stations), are in continental United States, 27 in Alaska, 9 in the Philippines, 3 in the Canal Zone, 3 in Panama, 2 in Hawaii, and 1 each in Puerto Rico, Guam, Samoa, China, Haiti, Virgin Islands, and Dominican Republic. The *Government* ship stations total 1,192.

Considerable meteorological services are given under the control of the Department of Agriculture, Weather Bureau, in co-operation with the Office of Communication of the Navy Department. An extensive Hydrographic and Time service is dealt with by the Naval Department.

There are 15 Air Mail Radio Stations used in connection with the mail services of the Post Office Department.

In practically every city of any size in the United States there are one or more radio clubs, composed of men interested in radiotelegraphy from a scientific standpoint, practical radio men, and amateur radio experimenters.* The most important of these clubs is the Institute of Radio Engineers (particulars regarding which may be obtained from the Year-Book published in New York by the Institute).

ADMINISTRATION.

In 1910 an effort to regulate radio communication in the United States was made, when a Bill was prepared and passed by the Senate. It was not reached on the House of Representatives calendar, and therefore did not become effective.

The first Act requiring radio apparatus on certain passenger-carrying vessels was approved June 24th, 1910. Under this Act the Secretary of Commerce and Labour organised on July 1st, 1911, the radio service, composed of three inspectors, with headquarters at New York, N.Y., Baltimore, Md., and San Francisco, Cal.

The second Act, approved July 23rd, 1912, amended the above Act and is printed below.

* For a list of the principal Clubs and Societies see Amateur section of this volume.

The Act to regulate radio communication was approved August 13th, 1912. Under this Act transmitting stations and radio operators are licensed by the Secretary of Commerce. Transmitting stations are inspected to ascertain whether they comply with the requirements of the law. Radio operators are examined in order to determine their qualifications.

In addition to the above-mentioned Acts, the Department also enforces the London International Radiotelegraphic Convention rules of 1912, to which the United States is a party.

On March 4th, 1913, the Act abolishing the Department of Commerce and Labour and creating the Department of Commerce and the Department of Labour became effective. The enforcement of the radio laws was placed under the jurisdiction of the Secretary of Commerce.

A An Act approved July 23rd, 1912, amending section 1 of an Act entitled "An Act to require apparatus and operators for radio communication on certain ocean steamers," approved June 24th, 1910.*

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled.

"SEC. 1. That from and after October first, nineteen hundred and twelve, it shall be unlawful for any steamer of the United States or of any foreign country navigating the ocean or the Great Lakes and licensed to carry, or carrying, fifty or more persons, including passengers or crew or both, to leave or attempt to leave any port of the United States unless such steamer shall be equipped with an efficient apparatus for radio communication, in good working order, capable of transmitting and receiving messages over a distance of at least one hundred miles, day or night. An auxiliary power supply, independent of the vessel's main electric power plant, must be provided which will enable the sending set for at least four hours to send messages over a distance of at least one hundred miles, day or night, and efficient

communication between the operator in the radio room and the bridge shall be maintained at all times.

"The radio equipment must be in charge of two or more persons skilled in the use of such apparatus, one or the other of whom shall be on duty at all times while the vessel is being navigated. Such equipment, operators, the regulation of their watches, and the transmission and receipt of messages, except as may be regulated by law or international agreement, shall be under the control of the master, in the case of a vessel of the United States; and every wilful failure on the part of the master to enforce at sea the provisions of this paragraph as to equipment, operators, and watches shall subject him to a penalty of one hundred dollars.

"That the provisions of this section shall not apply to steamers plying between ports, or places, less than two hundred miles apart."

SEC. 2. That this Act, so far as it relates to the Great Lakes, shall take effect on and after April first, nineteen hundred and thirteen, and so far as it relates to ocean cargo steamers shall take effect on and after July first, nineteen hundred and thirteen: *Provided*, That on cargo steamers, in lieu of the second operator provided for in this Act, there may be substituted a member of the crew or other person who shall be duly certified and entered in the ship's log

* The amended Act applies to vessels licensed to carry, as well as those actually carrying, 50 or more persons, etc.

as competent to receive and understand distress calls or other usual calls indicating danger, and to aid in maintaining a constant wireless watch so far as required for the safety of life.

The remaining sections of the Act of June 24th, 1910, which are unchanged, read as follows:—

SEC. 2. That for the purpose of this Act apparatus for radio communication shall not be deemed to be efficient unless the company installing it shall contract in writing to exchange, and shall, in fact, exchange, as far as may be physically practicable, to be determined by the master of the vessel, messages with shore or ship stations using other systems of radio communication.

SEC. 3. That the master or other person being in charge of any such vessel which leaves or attempts to leave any port of the United States in violation of any of the provisions of this Act shall, upon conviction, be fined in a sum not more than five thousand dollars, and any such fine shall be a lien upon such vessel, and such vessel may be libelled thereto in any district court of the United States within the jurisdiction of which such vessel shall arrive or depart, and the leaving or attempting to leave each and every port of the United States shall constitute a separate offence.

SEC. 4. That the Secretary of Commerce shall make such regulations as may be necessary to secure the proper execution of this Act by collectors of customs and other officers of the Government.

B AN ACT TO REGULATE RADIO COMMUNICATION.

APPROVED AUGUST 13TH, 1912.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That a person, company or corporation within the jurisdiction of the United States shall not use or operate any apparatus for radio communication as a means of commercial intercourse among the several States, or with foreign nations, or upon any vessel of the United States engaged in interstate or foreign commerce, or for the transmission of radiograms or signals the effect of which extends beyond the jurisdiction of the State or Territory in which the same are made, or where interference would be caused thereby with the receipt of messages or signals from beyond the jurisdiction of the said State or Territory, except under and in accordance with a license, revocable for cause, in that behalf granted by the Secretary of Commerce upon application therefor; but nothing in this Act shall be construed to apply to the transmission and exchange of radiograms or signals between points situated in the same State: *Provided*, That the effect thereof shall not extend beyond the jurisdiction of the said State or interfere with the reception of radiograms or signals from beyond said jurisdiction; and a license shall not be required for the transmission or exchange of radiograms or signals by or on behalf of the Government of the United States, but every Government station on land or sea shall have special call letters designated and published in the list of radio stations of the United States by the Department of Commerce. Any person, company, or corporation that shall use or operate any apparatus for radio communication in violation of this section, or knowingly aid or abet another person, company, or corporation in so doing, shall be deemed guilty of a misdemeanour, and on conviction thereof shall be punished by a

fine not exceeding five hundred dollars, and the apparatus or device so unlawfully used and operated may be adjudged forfeited to the United States.

SEC. 2.—That every such license shall be in such form as the Secretary of Commerce shall determine and shall contain the restrictions, pursuant to this Act, on and subject to which the license is granted; that every such license shall be issued only to citizens of the United States or Porto Rico or to a company incorporated under the laws of some State or Territory or of the United States or Porto Rico, and shall specify the ownership and location of the station in which said apparatus shall be used and other particulars for its identification and to enable its range to be estimated; shall state the purpose of the station, and, in case of a station in actual operation at the date of passage of this Act, shall contain the statement that satisfactory proof has been furnished that it was actually operating on the above-mentioned date; shall state the wavelength or the wavelengths authorised for use by the station for the prevention of interference and the hours for which the station is licensed for work; and shall not be construed to authorise the use of any apparatus for radio communication in any other station than that specified. Every such license shall be subject to the regulations contained herein, and such regulations as may be established from time to time by authority of this Act or subsequent Acts and treaties of the United States. Every such license shall provide that the President of the United States in time of war or public peril or disaster may cause the closing of any station for radio communication and the removal therefrom of all radio apparatus, or may authorise the use or control of any such station or apparatus by any department of the Government, upon just compensation to the owners.

SEC. 3.—That every such apparatus shall at all times while in use and operation as aforesaid be in charge or under the supervision of a person or persons licensed for that purpose by the Secretary of Commerce. Every person so licensed who in the operation of any radio apparatus shall fail to observe and obey regulations contained in or made pursuant to this Act or subsequent Acts or treaties of the United States, or any one of them, or who shall fail to enforce obedience thereto by an unlicensed person while serving under his supervision, in addition to the punishments and penalties herein prescribed, may suffer the suspension of the said license for a period to be fixed by the Secretary of Commerce not exceeding one year. It shall be unlawful to employ any unlicensed person or for any unlicensed person to serve in charge or in supervision of the use and operation of such apparatus, and any person violating this provision shall be guilty of a misdemeanour, and on conviction thereof shall be punished by a fine of not more than one hundred dollars or imprisonment for not more than two months, or both, in the discretion of the court for each and every such offence: *Provided*, That in case of emergency the Secretary of Commerce may authorise a collector of customs to issue a temporary permit, in lieu of a license, to the operator on a vessel subject to the radio ship Act of June 24th, 1910.

SEC. 4.—That for the purpose of preventing or minimising interference with communication between stations in which such apparatus

is operated, to facilitate radio communication, and to further the prompt receipt of distress signals, said private and commercial stations shall be subject to the regulations of this section. These regulations shall be enforced by the Secretary of Commerce through the collectors of customs and other officers of the Government as other regulations herein provided for.

The Secretary of Commerce may, in his discretion, waive the provisions of any or all of these regulations when no interference of the character above mentioned can ensue.

The Secretary of Commerce may grant special temporary licenses to stations actually engaged in conducting experiments for the development of the science of radio communication, or the apparatus pertaining thereto, to carry on special tests, using any amount of power or any wavelengths, at such hours, and under such conditions as will ensure the least interference with the sending or receipt of commercial or Government radiograms, of distress signals and radiograms, or with the work of other stations.

In these regulations the naval and military stations shall be understood to be stations on land.

REGULATIONS.

Normal Wavelength.

C 1. Every station shall be required to designate a certain definite wavelength as the normal sending and receiving wavelength of the station. This wavelength shall not exceed 600 metres or it shall exceed 1,600 metres. Every coastal station open to general public service shall at all times be ready to receive messages of such wavelengths as are required by the Berlin Convention. Every ship station, except as hereinafter provided, and every coast station open to general public service, shall be prepared to use two sending wavelengths, one of 300 metres and one of 600 metres, as required by the International Convention in force: *Provided*, That the Secretary of Commerce may, in his discretion, change the limit of wavelength reservation made by regulations first and second to accord with any international agreement to which the United States is a party.

Other Wavelengths.

2. In addition to the normal sending wavelength all stations, except as provided herein after in these regulations, may use other sending wavelengths: *Provided*, That they do not exceed 600 metres or that they do exceed 1,600 metres: *Provided further*, That the character of the waves emitted conforms to the requirements of regulations 3 and 4 following.

Use of a "Pure Wave."

3. At all stations if the sending apparatus, to be referred to hereinafter as the "transmitter," is of such a character that the energy is radiated in two or more wavelengths, more or less sharply defined, as indicated by a sensitive wavemeter, the energy in no one of the lesser waves shall exceed 10 per cent. of that in the greatest.

Use of a "Sharp Wave."

4. At all stations the logarithmic decrement per complete oscillation in the wave trains emitted by the transmitter shall not exceed two-tenths, except when sending distress signals or signals and messages relating thereto.

Use of "Standard Distress Wave."

5. Every station on shipboard shall be prepared to send distress calls on the normal wavelength designated by the international convention in force, except on vessels of small tonnage unable to have plants insuring that wavelength.

Signal of Distress.

6. The distress call used shall be the international signal of distress • • • — — • • •

Use of "Broad Interfering Wave" for Distress Signals.

7. When sending distress signals, the transmitter of a station on shipboard may be tuned in such a manner as to create a maximum of interference with a maximum of radiation.

Distance Requirement for Distress Signals.

8. Every station on shipboard, wherever practicable, shall be prepared to send distress signals of the character specified in regulations 5 and 6 with sufficient power to enable them to be received by day over sea a distance of 100 nautical miles by a shipboard station equipped with apparatus for both sending and receiving equal in all essential particulars to that of the station first mentioned.

"Right of Way" for Distress Signals.

9. All stations are required to give absolute priority to signals and radiograms relating to ships in distress; to cease all sending on hearing a distress signal; and, except when engaged in answering or aiding the ship in distress, to refrain from sending until all signals and radiograms relating thereto are completed.

Reduced Power for Ships near a Government Station.

10. No station on shipboard when within fifteen nautical miles of a naval or military station shall use a transformer input exceeding 1 kw., nor, when within five nautical miles of such a station, a transformer input exceeding $\frac{1}{2}$ kw., except for sending signals of distress, or signals or radiograms relating thereto.

Intercommunication.

11. Each shore station open to general public service between the coast and vessels at sea shall be bound to exchange radiograms with any similar shore station and with any ship station without distinction of the radio systems adopted by such stations, respectively, and each station on shipboard shall be bound to exchange radiograms with any other station on shipboard without distinction of the radio systems adopted by each station, respectively.

It shall be the duty of each such shore station, during the hours it is in operation, to listen-in at intervals of not less than fifteen minutes, and for a period not less than two minutes, with the receiver tuned to receive messages of 300 metre wavelengths.

Division of Time.

12. At important seaports and at all other places where naval or military and private or commercial shore stations operate in such close proximity that interference with the work of naval and military stations cannot be avoided by the enforcement of the regulations contained in the foregoing regulations concerning wavelengths and character of signals emitted, such private or commercial shore stations as do interfere with the reception of signals by the naval and military stations concerned shall not use their transmitters during the first fifteen minutes of each hour,

local standard time. The Secretary of Commerce may, on the recommendation of the department concerned, designate the station or stations which may be required to observe this division of time.

Government Stations to Observe Division of Time.

13. The naval or military stations for which the above-mentioned division of time may be established shall transmit signals or radiograms only during the first fifteen minutes of each hour, local standard time, except in case of signals or radiograms relating to vessels in distress, as hereinbefore provided.

Use of Unnecessary Power.

14. In all circumstances, except in case of signals or radiograms relating to vessels in distress, all stations shall use the minimum amount of energy necessary to carry out any communication desired.

General Restrictions on Private Stations.

15. No private or commercial station not engaged in the transaction of bona fide commercial business by radio communication or in experimentation in connection with the development and manufacture of radio apparatus for commercial purposes shall use a transmitting wavelength exceeding 200 metres or a transformer input exceeding 1 kw., except by special authority of the Secretary of Commerce contained in the license of the station: *Provided*, That the owner or operator of a station of the character mentioned in this regulation shall not be liable for a violation of the requirements of the third or fourth regulations to the penalties of one hundred dollars or twenty-five dollars, respectively, provided in this section unless the person maintaining or operating such station shall have been notified in writing that the said transmitter has been found, upon tests conducted by the Government, to be so adjusted as to violate the said third and fourth regulations, and opportunity has been given to said owner or operator to adjust said transmitter in conformity with said regulations.

Special Restrictions in the Vicinities of Government Stations.

16. No station of the character mentioned in regulation 15 situated within five nautical miles of a naval or military station shall use a transmitting wavelength exceeding 200 metres or a transformer input exceeding $\frac{1}{2}$ kw.

Ship Stations to Communicate with Nearest Shore Stations.

17. In general, the shipboard stations shall transmit their radiograms to the nearest shore station. A sender on board a vessel shall, however, have the right to designate the shore station through which he desires to have his radiograms transmitted. If this cannot be done, the wishes of the sender are to be complied with only if the transmission can be effected without interfering with the service of other stations.

Limitations for Future Installations in Vicinities of Government Stations.

18. No station on shore not in actual operation at the date of the passage of this Act shall be licensed for the transaction of commercial business by radio communication within fifteen nautical miles of the following naval or military stations, to wit: Arlington, Virginia; Key West, Florida; San Juan, Porto Rico; North Head and Tatoosh Island, Washington; San Diego, California;

and those established or which may be established in Alaska and in the Canal Zone; and the head of the department having control of such Government stations shall, so far as is consistent with the transaction of governmental business, arrange for the transmission and receipt of commercial radiograms under the provisions of the Berlin Convention of 1906, and future International Conventions or treaties to which the United States may be a party, at each of the stations above referred to, and shall fix the rates therefor, subject to control of such rates by Congress. At such stations and wherever and whenever shore stations open for general public business between the coast and vessels at sea under the provisions of the Berlin Convention of 1906 and future International Conventions and treaties to which the United States may be a party shall not be so established as to insure a constant service day and night without interruption, and in all localities wherever or whenever such service shall not be maintained by a commercial shore station within 100 nautical miles of a naval radio station, the Secretary of the Navy shall, so far as is consistent with the transaction of governmental business, open naval radio stations to the general public business described above, and shall fix rates for such service, subject to control of such rates by Congress. The receipts from such radiograms shall be covered into the Treasury as miscellaneous receipts.

Secrecy of Messages.

19. No person or persons engaged in or having knowledge of the operation of any station or stations, shall divulge or publish the contents of any messages transmitted or received by such station, except to the person or persons to whom the same may be directed or their authorized agent, or to another station employed to forward such message to its destination, unless legally required so to do by the court of competent jurisdiction or other competent authority. Any person guilty of divulging or publishing any message, except as herein provided, shall, on conviction thereof, be punished by a fine of not more than two hundred and fifty dollars or imprisonment for a period of not exceeding three months, or both fine and imprisonment, in the discretion of the court.

Penalties.

For violation of any of these regulations, subject to which a license under sections 1 and 2 of this Act may be issued, the owner of the apparatus shall be liable to a penalty of one hundred dollars, which may be reduced or remitted by the Secretary of Commerce and for repeated violations of any of such regulations the license may be revoked.

For violation of any of these regulations, except as provided in regulation 19, subject to which a license under section 3 of this Act may be issued, the operator shall be subject to a penalty of twenty-five dollars, which may be reduced or remitted by the Secretary of Commerce, and for repeated violations of any such regulations, the license shall be suspended or revoked.

SEC. 5.—That every license granted under the provisions of this Act for the operation or use of apparatus for radio communication shall prescribe that the operator thereof shall not wilfully or maliciously interfere with any other radio communication. Such interference shall be deemed a misdemeanor, and upon conviction thereof the owner or operator,

or both, shall be punishable by a fine of not to exceed five hundred dollars or imprisonment for not to exceed one year, or both.

SEC. 6.—That the expression "radio-communication" as used in this Act means any system of electrical communication by telegraphy or telephony without the aid of any wire connecting the points from and at which the radiograms, signals, or other communications are sent or received.

SEC. 7.—That a person, company, or corporation within the jurisdiction of the United States shall not knowingly utter or transmit, or cause to be uttered or transmitted, any false or fraudulent distress signal or call or false or fraudulent signal, call, or other radiogram of any kind. The penalty for so uttering or transmitting a false or fraudulent distress signal or call shall be a fine of not more than two thousand five hundred dollars or imprisonment for not more than five years, or both, in the discretion of the court for each and every such offence, and the penalty for so uttering or transmitting, or causing to be uttered or transmitted, any other false or fraudulent signal, call, or other radiogram shall be a fine of not more than one thousand dollars or imprisonment for not more than two years, or both, in the discretion of the court, for each and every such offence.

SEC. 8.—That a person, company, or corporation shall not use or operate any apparatus for radio communication on a foreign ship in territorial waters of the United States otherwise than in accordance with the provisions of sections 4 and 7 of this Act, and so much of section 5 as imposes a penalty for interference. Save as aforesaid, nothing in this Act shall apply to apparatus for radio communication on any foreign ship.

SEC. 9.—That the trial of any offence under this Act shall be in the district in which it is committed, or if the offence is committed upon the high seas or out of the jurisdiction of any particular State or district the trial shall be in the district where the offender may be found or into which he shall be first brought.

SEC. 10.—That this Act shall not apply to the Philippine Islands.

SEC. 11.—That this Act shall take effect and be in force on and after four months from its passage.

D REGULATIONS GOVERNING SHIP AND LAND RADIO STATIONS.

SHIP STATIONS.

1. On vessels coming under the Ship Acts, an emergency power supply, independent of the vessel's main electric power plant, must be provided which will enable radio messages to be sent for at least four hours over a distance of at least 100 miles day or night. The emergency power supply and equipment should be located and installed in such manner as to afford maximum protection against accident.

2. The radio transmitting apparatus operated from the emergency power supply, should be capable of functioning within two minutes after unexpected notice to the operator.

3. The complete equipment must be maintained in an efficient condition at sea.

4. The complete emergency equipment should be tested before each sailing and daily at sea by the operator or an inspector and a note of its performance entered in the radio log.

5. Radio inspectors or other duly authorised officers of the Government will occasionally call for test messages to be sent by means of the emergency apparatus, while the vessel is at sea.

6. An "induction coil" connected to "plain aerial" is not recommended as emergency apparatus on account of the high voltages produced which frequently damage the antenna insulation and on account of "vibrator troubles."

7. A motor generator or rotary converter operated by storage battery is probably the most satisfactory means available at present of energising the transmitting apparatus.

8. Any auxiliary engine for wireless purposes must operate on a fuel which will fulfil the requirements of Rule XI, section 5, of the General Rules and Regulations of the Steamboat Inspection Service, reading as follows:

None of the inflammable articles specified in section 4472, Revised Statutes, or oil that will not stand a fire test of 300° F. shall be used as stores on any pleasure steamer or steamer carrying passengers except that vessels not carrying passengers for hire may transport gasoline or any of the products of petroleum for use as a source of motive power for motor boats or launches of such vessels (Sec. 4472, R.S.)

9. Every ship station shall carry a reasonable number of spares of such parts of both the main and emergency radiotelegraph equipments as are subject to undue wear, deterioration, or liability to accident.

10. One extra pair of head telephones, extra cords, and extra detectors must always be kept on hand.

11. A storage battery voltmeter, hydrometer, a supply of electrolyte, and distilled water should be part of the regular equipment, but are not prescribed in terms by statute. The absence of these and similar inexpensive emergency articles will be brought to the attention of the master and of the company installing the apparatus by the radio inspector, in writing, and if after a reasonable interval they have not been supplied, the inspector will communicate the fact to the Commissioner of Navigation.

12. The vessel's electric power for the operation of the main equipment shall, at all times while the steamer is under way, be available for the radio operator's use. On steamers where the dynamo is not run continuously there should be an efficient means of communication between the radio room and the dynamo room, in order that the radio operator may signal for power, as the law provides that he may not leave his post of duty.

13. Efficient communication between the radio room and the bridge must be maintained. A speaking tube or telephone will comply with this requirement. A bell and messenger service will not be acceptable unless there are special conditions justifying this equipment. The speaking tube or telephone must terminate in the radioroom and on the bridge, or in the chart room if readily accessible from the bridge. If the radio room is adjacent to or accessible from the bridge so that orders may be transferred direct, no means of communication will be required. Any arrangement calling for the services of a third person to transmit the messages will not be satisfactory. The radio inspectors will notify the ship authorities whether the means of communication provided is satisfactory at the time of inspection.

14. On vessels of the United States it is the statutory duty of the master to see that one operator is on duty at all times. The radio service of the ship is under the supreme authority of the master.

15. Masters should require operators on duty to communicate with the officer on the bridge every half-hour.

16. Operators must make entries on the radio log *every fifteen minutes*, as evidence that a continuous watch is being maintained. The entries must, if possible, consist of the call letters of other stations communicating and a few words of the intercepted messages.

17. When vessels are in port the key to the radio room must at all times be on board in charge of the proper officer and the radio equipment shall be in such condition as to facilitate Government inspection.

CLASSIFICATION OF SHIP STATIONS AND GRADES OF OPERATORS REQUIRED.

18. First Class: Vessels having a continuous service. There shall be placed in the first-class vessels which are intended to carry twenty-five or more passengers:

(1) If they have an average speed in service of fifteen knots or more.

(2) If they have average speed in service of more than thirteen knots, but only subject to the two-fold condition that they have on board 200 persons or more (passengers and crew), and that, in the course of their voyage, they go a distance of more than 500 sea miles between any two consecutive ports.

19. Second Class: Vessels having a continuous *watch* but a *service* of limited duration. Other vessels placed in the second-class *must*, during navigation, maintain a continuous *watch* for at least seven hours a day, and a *watch* of ten minutes at the beginning of every other hour.

20. Third Class: Vessels which have no fixed periods of service. All vessels which are placed neither in the first nor in the second-class shall be placed in the third-class.

21. *Service* may be defined as preparedness to transmit and receive radio messages or signals at the rate of at least twenty words per minute.

22. *Watch* may be defined as preparedness to receive distress signals and call letters slowly. A "watcher" or cargo-grade operator will summon a first or second-class operator if necessary.

23. All American vessels required by the Act of July 23rd, 1912, to be equipped with radio apparatus, and operators *must* at all hours maintain a continuous *watch*; that is to say, an operator or *watcher* must be "listening-in" continuously. This requirement is outside of and above the requirement based on the classification under which the ship's station is licensed.

24. Vessels voluntarily equipped are not required to maintain this continuous *watch*. Vessels voluntarily equipped are, however, subject to the following requirements as to *watch* according to the class assigned to them in their station licenses.

25. If a licence of the second class be issued to a voluntarily equipped vessel, the station *must* maintain a continuous *watch* for at least seven hours a day and a *watch* of ten minutes at the beginning of every hour.

26. The grade of operators required on vessels of each class are prescribed in the London

Convention Service Regulations, Article X. A continuous *watch* may be maintained by one commercial second-grade operator and one cargo-grade operator on cargo steamers.

27. Passenger vessels coming under the Act of July 23rd, 1912, which carry or are licensed to carry twenty-five or more passengers, *must* be placed in the first class:

(a) If they have an average speed in service of fifteen knots or more.

(b) If they have an average speed in service of more than thirteen knots, but only subject to the twofold condition that they have on board 200 persons or more (passengers and crew), and that in the course of their voyage they go a distance of more than 500 sea miles between any two consecutive ports.

The *service* shall be carried on by at least two commercial first-grade operators.

28. Cargo vessels coming under the Act of July 23rd, 1912, which are required to maintain a continuous *watch*, *must* be placed in the second class if continuous *service* is not maintained. On cargo steamers a continuous *watch* may be maintained by at least one commercial second-grade operator and one cargo-grade operator.

29. Passenger vessels coming under the act of July 23rd, 1912, but which are not *required* to be entered in the first class, *may* be entered in the first or second class, according to whether continuous *service* or continuous *watch* is maintained. The number and grade of operators required is determined by *service* or *watch*. On passenger vessels coming under the Ship Act but entered in the second class at least two second-grade operators are required to maintain continuous *watch*.

30. Cargo vessels which coming under the Act of July 23rd, 1912, and are required to maintain a continuous *watch*, may be placed in the first class, if continuous *service* is maintained. (For operators, see par. 28.)

31. All vessels voluntarily equipped with radio apparatus and which have no specified hours of *service* or *watch* *must* be placed in the third class.

32. Any vessel voluntarily equipped may be placed in the first class if continuous *service* is maintained, or in the second class if a continuous *watch*, or a *watch* of limited duration, such as specified above for vessels of the second class is maintained.

33. In all ship stations transmissions shall be made only by operators holding commercial first or second grade licenses or higher.

34. Commercial *service* shall be maintained by not lower than commercial first-grade operators.

35. Vessels which are voluntarily equipped with radio apparatus for their own convenience and for the correspondence of officers and crew *must* employ at least one commercial second-grade operator or higher.

36. Radio telephone apparatus on vessels not coming under the Act of July 23rd, 1912, *must* be operated by a person holding a cargo-grade license or higher.

37. The owners of ship stations desiring to change the classification of a ship *must* apply for a new license.

LAND-STATIONS.

38. Coast stations are stations which transmit messages to vessels at sea or on the Great Lakes, or whose operations can interfere with the exchange of messages between ship and ship or ship and coast. The principal

purpose of the regulation of radio communication, international and national, is to secure the greatest efficiency of maritime communication through this agency, especially as a means of promoting safety to life.

39. Inland stations are stations which cannot transmit messages to vessels at sea or on the Great Lakes and whose operations cannot affect the transmission of messages between ship and ship or ship and coast. This may be due to their geographical location or to their range, dependent on power and aerial, or conditions. In some instances actual inspection may be necessary to determine whether a station should be licensed as a coast station or an inland station. An operator or owner in doubt as to the classification of his station should communicate the facts to the radio inspector of his district when applying for a licence.

40. Stations are bound to give absolute priority to calls of distress from ships, to similarly answer such calls, and to take such action with regards thereto as may be required.

41. The working of stations shall be organised as far as possible in such manner as not to disturb the service of other stations.

42. All coast stations (par. 38), excepting general and restricted amateur stations, are required to be able to transmit on the wavelengths of 300 and 600 metres for the purpose of transmitting or relaying distress messages or signals and messages relating thereto, if necessary.

43. Coast stations primary intended for long waves and long-distance transmission may install an auxiliary antenna and auxiliary transmitter to comply with the short wavelength requirements.

44. The international standard wavelength is 600 metres, and the operators of all coast stations are required, during the hours the station is in operation, to "listen-in" at intervals of not less than fifteen minutes and for a period of not less than two minutes, with the receiving apparatus tuned to receive this wavelength, for the purpose of determining if any distress signals or messages are being sent and to determine if the transmitting operations of the "listening stations" are causing interference with other radio communication.

45. General public service may be defined as "paid business," conducted on commercial wavelengths between ship and shore or ship and ship.

46. Limited public service may be defined as "paid business" between certain designated land stations, ships or lines of ships, and must be conducted on some authorised wavelength other than 300 or 600 metres.

47. All special service must be conducted on some authorised wavelength other than 300 or 600 metres, not interfering with general public service.

48. Special commercial, special amateur, and all stations which have no authorised rates, shall not transmit or accept public correspondence from other stations, except in case of emergency.

49. If a general public-service coast station also maintains a limited commercial service with other stations on land or with vessels at sea, the limited commercial service must be conducted on some authorised wavelength other than 300 or 600 metres, but this service can be authorised on a general public-service

coast station license without stating the specific hours, it being understood that the limited commercial service is conducted only when no general public service business is on file.

50. If a general public-service coast station also maintains a public service between fixed points on land, the service between the land stations must be conducted on some authorised wavelength other than 300 or 600 metres, and a separate form, No. 761, should be submitted covering "Limited public service," giving the exact hours of such service.

CLASSIFICATION OF LAND STATIONS AND GRADES OF OPERATORS REQUIRED.

51. Both coast stations (the word "coast stations," "shore stations," and "coastal stations" are used interchangeably) and inland stations are divided for the purposes of the administration of the Act into the following classes:

- (1) Public-service stations—
 - (a) General.
 - (b) Limited.
- (2) Limited commercial stations.
- (3) Experiment stations for the development of radio communication.
- (4) Technical and training school station.
- (5) Special amateur stations.
- (6) General amateur stations.
- (7) Restricted amateur stations.

52. CLASS I.—(a) *Public-Service stations, general*, are those open to general business between coast and ships and include those operated by common carriers under the Act of February 4th, 1887, to regulate commerce, amended June 18th, 1910. They are required to maintain a constant service when open. Every coastal station open to public service shall at all times be ready to receive messages of such wavelengths as are required by the International Convention in force. (Sec. 4, Regulation 1, Act of August 13th, 1912.) The station rates are authorised in the licence and published in the Official Berne List. Whenever such stations do not insure a constant service, transmitting and receiving day and night without interruption, the Secretary of the Navy is directed to open naval radio stations within 100 miles thereof to public business. (Sec. 4, Regulation 18, Act of August 13th, 1912.) The Secretary of War is authorised by the Act of May 26th, 1900 (31 Stat., 206), to open Alaskan military stations to public service.

53. General public service shall be conducted only by operators holding commercial first-grade licenses or higher.

54. CLASS I.—(b) *Public-service stations, limited*, are reserved for a limited public service, determined by the object of the correspondence or other circumstances independent of the system employed. Stations of this class transmit and receive public messages to and from certain stations only, which are designated in the license. The rates are authorised in the licenses, and if not published in the official list they may be obtained from the licensee.

55. The service of limited public service coast stations shall be carried on by commercial first-grade operators or higher.

56. The service of limited public service inland stations shall be carried on by commercial second-grade operators or higher,

57. CLASS 2.—*Limited commercial stations* are not open to public service and are licensed for a specific commercial service or services defined in the license. Stations of this class must not transmit to or accept public messages from other stations. No rates are authorised.

58. If a coast station, the operators shall hold a commercial second-grade license or higher. (Par. 57.)

59. CLASS 3.—*Experiment stations*.—The Secretary of Commerce is authorised by section 4 of the Act to grant special temporary licences "to stations actually engaged in conducting experiments for the development of the science of radio communication, or the apparatus pertaining thereto, to carry on special tests, using any amount of power or any wavelengths, at such hours and under such conditions as will insure the least interference with the sending or receipt of commercial or Government radiograms, of distress signals and radiograms, or with the work of other stations." Applicants for such licences should state any technical result they have already produced, their technical attainments, etc. The fact that an applicant desires to experiment with his equipment does not justify or require a license of this class. Most experiments can be made within the limitations of general and restricted amateur station licenses or by use of an artificial antenna to prevent radiation.

60. Experiment stations may be operated by a person holding an experiment and instruction grade license or higher.

61. CLASS 4.—*Technical and training-school stations* will be licensed, according to the degree of technical training attained and imparted and to local conditions.

62. The grade of operators required will be specified when the license is issued.

63. CLASS 5.—*Special amateur stations* may be licensed by the Secretary of Commerce to use a longer wavelength and a higher power on special application. Applications for this class from amateurs with less than two years' experience in actual radio communication will not be approved. The application must state the experience and purpose of the applicant, the local conditions of radio communication, especially of maritime radio communication in the vicinity of the station, and a special license will be granted only if some substantial benefit to the art or to commerce apart from individual amusement seems probable. (Sec. 4, Regulation 15, Act of August 13th, 1912.)

64. Special amateur coast stations must be operated by a person holding a commercial second-grade license or higher. Inland stations may be operated by persons holding amateur second-grade licenses or higher.

65. CLASS 6.—*General amateur stations* are restricted to a transmitting wavelength not exceeding 200 metres and a transformer input not exceeding 1 kw. (Sec. 4, Regulation 15, Act of August 13th, 1912.)

66. CLASS 7.—*Restricted amateur stations*, within five nautical miles of a naval or military station, are restricted to a wavelength not exceeding 200 metres and to a transformer input not exceeding $\frac{1}{2}$ kw. (Sec. 4, Regulation 16, Act of August 13th, 1912.)

67. Amateur first or second grade operators or higher are required for general and restricted amateur stations.

68. The license does not specify the number of operators required, but provides that the station shall at all times while in operation be under the care of an operator licensed for that purpose. The grade and number of operators as required by law is determined by the service of the station.

69. *Special stations for exceptional distances* are land stations designed to carry on trans-oceanic radio communication as between the United States and European countries, or between the Pacific coast and Hawaii, or from the United States over similar long distances at sea to another land station, or (inland) to carry on radio communication overland over exceptional distances. These stations will all come under one of the classifications named above and the license will indicate the stations for which communication is authorised and indicate the range.

REGULATIONS COMMON TO LAND AND SHIP STATIONS.

70. Any change in the characteristics of the radio apparatus or service of the station must be authorised by the Secretary of Commerce.

71. Every land and ship station open to general public service shall have, as a part of the station equipment, a copy of the Official Berne List of Radiotelegraph Stations and supplements thereto, as issued to comply with section 2 of the Act of July 24th, 1910. Information concerning the use of this list and method of procuring it is given on page 72, paragraph 196.

72. The service regulations of the London Convention, Article VII, paragraphs 1 and 2b, require a reduction of power or range under certain conditions. A proper resistance, impedance coil, or reactance regulator in the primary circuit is recommended. In certain cases the reduction of voltage or decreasing of coupling may be approved upon recommendations of radio inspectors.

73. Persons or corporations holding licenses for radio stations, either land or ship, if practicable, must submit the license to the radio inspector for the district, whenever the station or vessel goes out of commission for a period exceeding three months. The Commissioner of Navigation should be notified promptly of any intention to suspend or discontinue the service of any commercial station.

74. If there is no intention to resume the same service or if the station or vessel will enter a different service from that indicated by the license, the radio inspector will submit the license to the Bureau, together with a statement of the facts. Otherwise the radio inspector may retain the license in his files for safe keeping until the date of its expiration, when it will be forwarded to the Bureau for cancellation.

75. When the station goes into commission the owner may apply to the radio inspector for the return of the license. The radio inspector will satisfy himself that the station corresponds to the schedule of the station as shown in the license, and if so, the license will be returned.

76. Stations desiring to conduct tests should communicate with the radio inspector by letter or telephone, stating the probable length of time that will be required. Stations conducting such tests or temporary experiments should "listen-in," to determine that no interference is being caused, and during the tests

should "listen-in" frequently for the interference signal, "QRM." Stations conducting tests should transmit their official call signal frequently. Attention is invited to the Act of August 13th, 1912, section 5:

That every license granted under the provisions of this Act for the operation or use of apparatus for radio communication shall prescribe that the operator thereof shall not wilfully, or maliciously interfere with any other radio communication. Such interference shall be deemed a misdemeanor, and upon a conviction thereof the owner or operator, or both, shall be punishable by a fine not to exceed five hundred dollars or imprisonment for not to exceed one year, or both.

77. The Department holds that interference caused by tests of the character described above (par. 76) is "wilful" when no "listening-in" precautions are taken and the call signal of the station sending is not repeated at intervals.

APPLICATIONS FOR SHIP AND LAND STATION LICENSES, RENEWALS, AND DUPLICATES.

78. The Act does not apply either afloat or ashore to—

(a) Apparatus for radio communication which merely receives radiograms and is not equipped for sending.

(b) Apparatus for the transmission of radiograms exclusively between points in the same State, if the effect of such transmission does not extend beyond the State (so as to interfere with the radio communication of other States), or if the effect of such transmission does not interfere with the reception of radiograms from beyond the State (so as to interfere with the interstate radio communication of that State).

(c) Apparatus for radio communication which has been issued to the Organised Militia by the War Department or to the Naval Militia by the Navy Department and is used for official purposes only.

79. The owner or operator of any apparatus who may be in doubt whether his apparatus, under this paragraph, is exempt from license may write the facts to the radio inspector for his district before applying for a license.

80. The apparatus for transmission of radiograms, or signals on any vessel of the United States not permanently moored, requires a license.

81. Apparatus for radio communication on land within the jurisdiction of the United States (excluding the Philippine Islands and excluding apparatus of the Government of the United States) must be licensed if—

(a) The apparatus is a means of commercial intercourse among the several States or with foreign nations; or

(b) The apparatus transmits radiograms or signals the effect of which at any time extends beyond the State; or

(c) The apparatus interferes with the receipt of messages in any State from beyond such State.

82. Station licenses for the use and operation of apparatus for radio communication under the Act may be issued only to citizens of the United States or Porto Rico or to a company incorporated under the laws of some State or Territory or of the United States or Porto Rico.

83. Licenses can be issued to clubs if they are incorporated or if a member will accept the responsibility for the operation of the apparatus, carrying with it the possibility of being penalised for infraction of the laws.

84. Applications for station licenses of all classes should be addressed to the United States Radio Inspector for the district in which the station is located, who will forward the necessary blank forms and information. The limits of the districts and addresses of radio inspectors are given on page 68, paragraph 166.

85. Upon receipt of the forms, properly completed, the radio inspector will make a thorough inspection of the station if practicable.

86. When applications and forms have been properly submitted, ship and amateur stations may be operated in accordance with the laws and regulations governing the class of station for which application for license has been made, until such time as the application can be acted upon unless the applicant is otherwise instructed and provided temporary official call letters are assigned.

87. General and restricted amateur-station licenses are issued directly by radio inspectors. Station licenses of all other classes are issued from the office of the Commissioner of Navigation, Department of Commerce. Applications and forms are forwarded by radio inspectors with recommendations by them.

88. Stations desiring to operate different portions of the day under different classifications shall submit application for each service, giving exact hours for each. If approved, each classification will be specified in the license.

89. The owner of an amateur station may operate his station in accordance with the laws if his application for a license has been properly filed, but has not been acted upon. An application for an operator's license must also have been filed, and every effort made to obtain the license before the station may be operated.

90. "Provisional" station licenses are issued to amateurs remote from the headquarters of the radio inspector of the district in which the station is located. These licenses are issued as a matter of convenience and record. If, under inspection, the station is found to comply with the law, the inspector will strike out the word "Provisional" and insert the date of inspection and his signature at the bottom of the license.

91. If such a station is found not to comply with the law the provisional license may be cancelled until such time as the apparatus is readjusted to meet the requirements of the law: *Provided, however*, That consideration will be given to any reports of interference filed against such a station.

92. All persons are warned that it is unlawful to operate stations after licenses have expired unless application for renewal has been properly made.

93. Owners desiring to renew licenses must complete new forms as prescribed for original applications. Amateur-station licenses issued on current forms may be renewed by the following endorsement on the back, provided no changes in the equipment or location have been made; otherwise a new license will be issued: "This license renewed for one year.

Radio Inspector." The Commissioner of Navigation will be notified of the name and call signal in every case of renewal in this manner.

94. Any person applying for a duplicate license to replace an original which has been lost, mutilated, or destroyed will be required to submit an affidavit to the Bureau of Navigation through the radio inspector of the district, attesting the facts regarding the manner in which the original was lost. The Commissioner of Navigation will consider the facts in the case and advise the radio inspector in regard to the issue of a duplicate license or a duplicate will be forwarded through the inspector's office.

95. A duplicate license will be issued under the same serial number as the original and will be marked "Duplicate" in red across the face.

REGULATIONS GOVERNING RADIO OPERATORS.

CLASSES, GRADES AND REQUIREMENTS.

E 96. (1) Commercial extra first grade; (2) commercial first grade; (3) commercial second grade; (4) commercial cargo grade; (5) commercial temporary permit; (6) experiment and instruction grade; (7) amateur first-grade; (8) amateur second grade.

97. The Service Regulations of the International Convention require that "the service of the station on shipboard shall be carried on by a telegraph operator holding a certificate issued by the Government to which the vessel is subject."

98. Such certificates shall attest the professional efficiency of the operator as regards—

(a) Adjustment of the apparatus and knowledge of its functioning;

(b) Transmission and acoustic reception at the rate of not less than twenty words a minute (Continental Morse) for commercial first-grade operators and not less than twelve words per minute for second-grade operators;

(c) Knowledge of the regulations governing the exchange of wireless telegraph correspondence.

(d) The certificate shall furthermore state that the Government has bound the operator to secrecy with regard to the correspondence.

99. The International Convention has been ratified by the principal maritime nations, dominions and provinces. Radio operators holding valid certificates issued by foreign Governments which are parties to the convention will be recognised by this department as persons "skilled in the use of such apparatus" within the meaning of the Act, unless in the case of a specific individual there may be special reason to doubt the operator's skill and reliability. Such certificates should be ready at hand for the inspection of radio inspectors or customs officers before the steamer departs from the United States.

100. In the case of a vessel subject to the Act under the flag of any nation not a party to the International Convention, the radio operator, before the departure of the vessel from the United States, must furnish to the inspector evidence that he is "skilled in the use of the apparatus." This evidence shall consist of an examination on board by the radio inspector.

101. *Commercial extra first class.*—The Department of Commerce will issue a special license, to be known as commercial extra first grade to radio operators whose trustworthiness and efficient service entitle them to confidence and recognition.

102. These licenses will be given consideration by the Civil Service Commission in examinations for positions requiring knowledge of radiotelegraphy, when experience is rated as a part of such examinations.

103. Applicants for the commercial extra first-grade license must pass a special examination. To be eligible for this examination they must hold commercial first-grade licenses, and their certificates of skill in radio communication, issued under the Act of June 24th, 1910, or licenses under the Act of August 13th, 1912, must record eighteen months' satisfactory commercial service at sea or at land stations, either or both, during the two years previous to the filing of the application for examination, as shown by endorsement on the license service records, or other satisfactory evidence, and provided that the applicants have not been penalised for a violation of the radio laws and regulations.

104. A speed of at least thirty words per minute Continental Morse, and twenty-five words per minute, American Morse (five letters to the word), must be attained. The technical questions and the questions on the radio laws and regulations will be considerably wider in scope than those for commercial first grade, and a higher percentage will be required.

105. All examination papers, including the code test sheets, will be marked and forwarded to the Commissioner of Navigation, with a recommendation by the radio inspector or examining officer. Examination papers will be marked upon the basis of 100, and licenses will be recommended only if eighty or better is attained.

106. Licenses of this grade will be issued by the Commissioner of Navigation, endorsed by the Secretary of Commerce, and delivered to the successful applicant through the examining officer.

107. *Commercial first class.*—The applicant must pass a satisfactory examination in—

(a) The adjustment, operation, and care of the apparatus, including correction of faults and change from one wavelength to another.

(b) Transmitting and receiving by ear at a speed of not less than twenty words a minute in Continental Morse (five letters to the word).

(c) Use and care of storage battery or other auxiliary power apparatus.

(d) Knowledge of the international regulations in force applying to radio communication.

(e) Knowledge of the requirements of the Acts of Congress to regulate radio communication (secs. 3, 4, 5, 6, and 7 of the Act of August 13th, 1912).

108. The commercial extra first grade and the commercial first-grade licenses qualify holders for employment at any ship or land station of any class.

109. *Commercial second class.*—The applicant must pass a satisfactory examination in all the subjects prescribed above for the first grade, with the exception that the minimum speed in transmitting and receiving shall not be less than twelve words a minute in Continental Morse, and the examination in the subjects will not be as comprehensive as that given first-grade operators.

110. *Commercial cargo grade.*—Section 2 of the Act of July 23rd, 1912, provides: "On cargo steamers, in lieu of the second operator provided for in this Act, there may be substituted a member of the crew or other person who shall be duly certified and entered in the ship's log as competent to receive and understand distress calls or other usual calls indicating danger, and to aid in maintaining a constant wireless watch so far as required for the safety of life."

111. The examination will be conducted so as to determine the following facts:

(a) That the applicant is sufficiently familiar with the Continental Morse Code to recognise the distress signal (SOS), when included in a list of other words or signals sent slowly (approximately five words a minute).

(b) That the applicant is sufficiently familiar with the Continental Morse Code to recognise radio call letters of the vessel on which he desires to operate when sent slowly and repeated several times.

(c) That the applicant is sufficiently familiar with the type of the receiving apparatus of the vessel on which he desires to operate to determine by buzzer or similar test that the detector or receiving apparatus is properly adjusted to receive signals.

112. Examining officers and radio inspectors are authorised to issue a certificate, in the form of an amateur first-grade license, after examination, to indicate the facts above enumerated in the case of a member of the crew or other person, and experience under this form will be credited by examining officers if the holder later applies for examination for a commercial license. These licenses will be marked "Cargo" in the upper right-hand corner under the serial number.

113. *Commercial temporary permit.*—Section 3 of the Act of August 13th, 1912, provides: "In case of emergency the Secretary of Commerce may authorise a collector of customs to issue a temporary permit, in lieu of a license, to the operator on a vessel subject to the Radio Ship Act of June 24th, 1910."

114. The temporary permit, in the form of a letter to the operator, is to be issued only in cases of emergency and will be valid for one voyage from to unless the proper license or properly licensed operator can be obtained en route.

115. The permits should be issued only to persons who the collector of customs has reason to believe are skilled in the use of the apparatus, but have not had the opportunity to present themselves for examination before Government officers authorised to conduct examinations and furnish licenses.

116. The collector of customs will forward to the Department of Commerce (Bureau of Navigation) a report covering each temporary permit issued and the reasons for its issue.

117. *Experiment and instruction grade.*—Experimenters and instructors of scientific attainments in the art of radio communication whose knowledge of the radio laws satisfies the radio inspector or the examining officer may obtain this grade license, provided they are able to transmit and receive in the Continental Morse Code at a speed sufficient to enable them to recognise distress calls or the "keep-out" signals.

118. The operator's license for this grade is a commercial license, endorsed by the Secretary of Commerce with a statement of the special purpose for which it is valid.

119. If the applicant qualifies, the radio inspector or examining officer will forward the papers to the Commissioner of Navigation, with his recommendation. If approved, the license will be properly endorsed by the Secretary of Commerce and delivered to the licensee through the recommending officer.

120. This license has no reference to the instruction of radio operators as such, but is required by those operating apparatus licensed as experimental stations but who are unable to obtain commercial grade operators' licenses.

121. Amateurs before applying for licenses should read and understand the essential parts of the International Radiotelegraphic Convention in force and sections 3, 4, 5, and 7 of the Act of August 13th, 1912. The Department recognises that radio communication offers a wholesome form of instructive recreation for amateurs. At the same time its use for this purpose must observe strictly the rights of others to the uninterrupted use of apparatus for important public and commercial purposes. The Department will not knowingly issue a license to an amateur who does not recognise and will not obey this principle. To this end the intelligent reading of the International Convention and the Act of Congress is prescribed as the first step to be taken by amateurs. A copy of the radio laws and regulations may be procured for this purpose from the radio inspectors or from the Commissioner of Navigation, Department of Commerce, Washington, D.C., but they are not for public distribution. Additional copies may be purchased from the Superintendent of Documents, Government Printing Office, Washington, D.C., at a nominal price.

122. *Amateur first grade.*—The applicant must have a sufficient knowledge of the adjustment and operation of the apparatus which he wishes to operate and of the regulations of the International Convention and Acts of Congress in so far as they relate to interference with other radio communication and impose certain duties on all grades of operators. The applicant must be able to transmit and receive in Continental Morse at a speed sufficient to enable him to recognise distress calls or the official "keep-out" signals. A speed of at least ten words per minute (five letters to the word) must be attained.

123. *Amateur second grade.*—The requirements for the second grade will be the same as for the first grade. The second-grade license will be issued only where an applicant cannot be personally examined or until he can be examined. An examining officer or radio inspector is authorised in his discretion to waive an actual examination of an applicant for an amateur license, if the amateur for adequate reasons cannot present himself for examination but in writing can satisfy the examining officer or radio inspector that he is qualified to hold a license and will conform to its obligations.

EXAMINATIONS.

124. The following requirements and method of conducting examination for radio operators' licenses will be adopted at all examining offices.

125. The test shall consist of messages with call letters and regular preambles, conventional signals and abbreviations and odd phrases, and shall in no case consist of simple, connected reading matter. The test will be conducted by means of the omnigraph or other automatic instrument wherever possible.

126. The test shall continue for five minutes at a speed of twenty words, twelve words and ten words per minute, respectively, for the commercial first, second, and lower grades, and to qualify the applicant must receive twenty, twelve, or ten words in consecutive order.

127. The code test sheets written by the applicant will be forwarded to the Commissioner of Navigation with other papers and the speed attained noted in the lower left-hand corner of the first sheet.

128. An applicant will be given credit for the maximum speed he can attain.

129. The practical and theoretical examination shall consist of seven comprehensive questions under the following headings and values:

	Points, maximum value.
(a) Experience	20
(b) Diagram of receiving and transmitting apparatus	10
(c) Knowledge of transmitting apparatus	20
(d) Knowledge of receiving apparatus	20
(e) Knowledge of operation and care of storage batteries	10
(f) Knowledge of motors and generators	10
(g) Knowledge of international regulations governing radio communication and the United States radio laws and regulations	10
	100

130. Seventy-five constitutes a passing mark for the first-grade commercial. Sixty-five constitutes a passing mark for the second-grade commercial.

131. Applicants who fail to attain twenty words in the code test but who attain a mark of between sixty-five and seventy-five in the written examination may be issued second-class licenses, if they can receive at least twelve words per minute.

132. Question (a) shall determine the applicant's practical knowledge and experience in handling radio apparatus. An applicant's experience will be determined largely from the personal question sheet, and from satisfactory letters or references submitted. Experience, operating first-class amateur apparatus, or the apparatus provided in good training schools, will be given a reasonable value, but applicants who have had experience as apprentices at commercial shore stations or on board vessels will receive higher marks.

133. No applicant who fails to qualify will be re-examined at any examining office within three months from date of the previous examination. All examination papers, whether the applicant qualifies or not, will be forwarded to the Bureau of Navigation for filing as "Operator's record." When the records of the Bureau develop the fact that an applicant has failed to qualify and has applied for re-examination or been re-examined at the same or another office within three months, his existing license may be suspended or

revoked by the Secretary of Commerce. Applicants to whom are issued second-grade licenses will not be examined for first-grade within three months under the same rule.

PLACES WHERE EXAMINATIONS ARE HELD.

134. (Excised.)

135. Naval radio stations: San Juan, P.R.; Colon, R.P.; Honolulu, H.T.

136. United States Army stations: Fort St. Michael, Alaska; Fort Valdez, Alaska.

137. Bureau of Navigation, Department of Commerce, Washington, D.C.

138. Radio inspectors, at their offices and elsewhere, by special arrangement.

139. Additional opportunities for taking the examination will be afforded as may be deemed necessary, and these special dates and places may be ascertained by communication with the Commissioner of Navigation, or nearest radio inspector.

140. All licenses, when awarded, will be delivered through the officer who conducted the examination.

141. Examinations for the commercial extra first-grade licenses will be held at the following offices only by appointment.

142. (Excised.)

143. United States radio inspectors, custom-houses: New Orleans, La.; San Francisco; Cal.; Seattle, Wash.; Chicago, Ill.; Boston, Mass.; New York, N.Y.; Baltimore, Md.; Detroit, Mich.; Norfolk, Va.

144. Commissioner of Navigation, Department of Commerce, Washington, D.C.

145. In special cases, upon application to the Commissioner of Navigation, arrangements may be made for examinations at other points.

APPLICATIONS FOR EXAMINATIONS FOR RADIO OPERATORS' LICENSES, RENEWALS, AND DUPLICATES.

146. An operator's license may be granted to any person without regard to sex, nationality or age if the applicant can fulfil the requirements for the class of license desired.

147. Applicants for licenses should communicate in writing with the commandants, commanding officers, or officers in charge at navy yards, and army posts, with the Commissioner of Navigation, or radio inspectors, in order to fix the date when they can be examined. (See pars. 134-145.)

148. Commercial licenses can only be obtained by personal examination. Where applicants are at remote points or cannot proceed to examining offices, efforts will be made to examine them through radio inspectors when they are in that vicinity, but special trips cannot be made for that purpose.

149. Amateurs should write to the nearest examining officer in their vicinity (see pars. 134-145) for Form 756 (application for operator's license) and to the radio inspector in their vicinity for Form 762 (application for license for land station). If the application for operator's license is also made to the radio inspector, both applications should be forwarded in the same envelope.

150. Amateur operators at points remote from examining officers and radio inspectors may be issued second-grade amateur licenses without personal examination. Examinations for first-grade licenses will be given by the radio inspector when he is in that vicinity, but special trips cannot be made for this purpose (see par. 123).

151. Persons holding radio operator's licenses, amateur second grade, should make every effort to appear at one of the examination points to take the examination for amateur first-grade license or higher.

152. Persons holding radio operator's licenses of any class or grade should, before their licenses expire, apply to the nearest radio inspector or examining officer for renewal and submit Form 756 in duplicate.

153. Radio operators of the commercial class or cargo grade whose licenses show on the service records satisfactory service for three months out of the last six months of the license term may be issued new licenses without re-examination. Other operators who submit satisfactory evidence to the examining officer, showing actual operations of radio apparatus for three months during the last six months of the license term, may be issued new licenses without re-examination. All others will be re-examined in the usual manner.

154. Whether or not a new license is issued, the radio inspector or examining officer will forward one copy of Form 756, properly completed, to the Commissioner of Navigation, Department of Commerce. If a new license is not issued, the reason therefor will be stated on the back of the form.

155. Any operator applying for a duplicate license to replace an original which has been lost, mutilated, or destroyed will be required to submit an affidavit to the Bureau of Navigation through the radio inspector or examining officer who issued the original, attesting the facts regarding the manner in which the original was lost. The Commissioner of Navigation will consider the facts in the case and advise the radio inspector in regard to the issue of a duplicate license. A duplicate license will be issued under the same serial number as the original and will be marked "Duplicate" in red across the face.

156. Operators' licenses are not valid until the oath for the preservation of the secrecy of messages is properly executed before a notary public or other officer duly authorized to administer oaths. Licenses must indicate on their faces that the oath has been taken and the officer administering the oath on the back of the license should sign also in the blank provided on the face.

157. Operators' licenses should be framed and posted in the radio room, and licenses for stations should be accessible at all times to inspectors.

158. Under the supervision of a licensed operator an apprentice or unlicensed person may learn the art by the actual use of the apparatus, but the licensed operator who fails to enforce obedience to the regulations by the apprentice or unlicensed person serving under his supervision is liable to penalties as if he had himself violated the regulations.

159. An individual record is kept in the Bureau of Navigation, Department of Commerce, at Washington, of each licensed operator. Each operator's examination papers and all reports in regard to interference or violations of the radio laws and regulations are filed for reference.

160. Radio operators holding licenses of any grade or class and applying for examination for any other grade or class must submit to the examining officer Form 756, in duplicate. If a new license is issued the license held by the applicant must be surrendered.

161. Radio operators who pass the examination for a higher class or grade license are required to surrender their existing licenses, which will be forwarded to the Commissioner of Navigation with the other papers.

162. Operators desiring to retain their expired or cancelled licenses may make application therefor to the Commissioner of Navigation.

GENERAL INFORMATION.

ADMINISTRATION AND ADMINISTRATIVE DISTRICTS.

F 163. The Department has established, for the purpose of enforcing, through radio inspectors and others, the acts relating to radio communication and the International Convention, the following districts, with the principal office for each district at the custom house of the port named.

164. Communications for radio inspectors should be addressed as follows, and not to individuals: Radio Inspector, Customhouse, (city), (State).

165. Communications for the Bureau of Navigation should be addressed as follows, and not to individuals: Commissioner of Navigation, Department of Commerce, Washington, D.C.

166. (1) BOSTON, MASS.: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut.

(2) NEW YORK, N.Y.: New York (county of New York, Staten Island, Long Island, and counties on the Hudson River to and including Schenectady, Albany, and Rensselaer) and New Jersey (Counties of Bergen, Passaic, Essex, Union, Middlesex, Monmouth Hudson, and Ocean).

(3) BALTIMORE, MD.: New Jersey (all counties not included in second district), Pennsylvania (counties of Philadelphia, Delaware, and all counties south of the Blue Mountains, and Franklin County), Delaware, Maryland, Virginia, District of Columbia.

(4) SAVANNAH, GA.: North Carolina, South Carolina, Georgia, Florida, Porto Rico.

(5) NEW ORLEANS, LA.: Alabama Mississippi, Louisiana, Texas, Tennessee, Arkansas, Oklahoma, New Mexico.

(6) SAN FRANCISCO, CAL.: California, Hawaii, Nevada, Utah, Arizona.

(7) SEATTLE, WASH.: Oregon, Washington, Alaska, Idaho, Montana, Wyoming.

(8) DETROIT, MICH.: New York (all counties not included in second district), Pennsylvania (all counties not included in third district), West Virginia, Ohio, Michigan (Lower Peninsula).

(9) CHICAGO, ILL.: Indiana, Illinois, Wisconsin, Michigan (Upper Peninsula), Minnesota, Kentucky, Missouri, Kansas, Colorado, Iowa, Nebraska, South Dakota, North Dakota.

REPORTING OF VIOLATIONS.

167. The regulations established by law, or by the authority of law, or of the International Convention, will be enforced by the Secretary of Commerce through collectors of customs, radio inspectors, and other officers of the Government.

168. The service regulations of the radio-telegraphic Convention in force provide that "no station on shipboard shall be established or worked by private enterprise without authority from the Government to which the vessel is subject." Such authority shall be in the nature of a license issued by said

Government. Stations on foreign ships will be licensed by their Governments respectively. Inspectors will report to the Commissioner of Navigation stations on foreign ships not so licensed.

169. A radio inspector is authorised in exceptional cases to act outside of his district for the convenience of commerce. In such cases he will communicate before or after acting with the inspector in whose district he has acted. Radio inspectors are authorised to communicate directly with collectors of customs and to co-operate with them in the enforcement of the law.

170. Violations of the laws and regulations will be reported to the chief customs officer of the district in which the offence occurs, who will report the case to the Secretary of Commerce (Bureau of Navigation), according to the procedure followed in violations of the navigation laws. Misdemeanours will be reported to the United States district attorney in the usual manner.

171. Collectors of customs and radio inspectors are enjoined that the reports required by paragraph 170 must be precise statements of the facts as the basis for possible proceedings by the United States attorney.

172. Violations by the master of a vessel of the United States of the provisions of the second paragraph of section 1 of the ship act will be reported to the collector of customs directly, and the usual procedure in cases of fines and penalties will be followed.

INSPECTION OF SHIP STATIONS.

173. The radio inspectors and customs officers, as far as practicable shall visit steamers subject to the act before they leave port and ascertain if they are equipped with the apparatus in charge of the operators prescribed by law and regulation.

174. When the radio apparatus is certified as complying with the requirements of law by the competent authorities of a foreign Government, such certificate will be recognised by this Department, but the radio inspector or customs officer may, if he deem it necessary or desirable, satisfy himself that the apparatus is in good working order.

175. Whenever practicable the radio inspector shall satisfy himself on his visit before the departure of a steamer subject to the act of July 23rd, 1912, that the apparatus is efficient and in good working order within the meaning of the Act, and if satisfied he shall issue a certificate in the form of Appendix A (form 752). The duplicate of these certificates will be filed with the collector of customs as a record of the radio equipment on vessels sailing from his port.

176. These certificates will be issued only if the inspection is made within two hours of sailing time.

177. For each clearance the master of a steamer coming under the Act of July 23rd, 1912, is required to furnish to the customs officer a certificate in the form in Appendix B (Form 753). Such certificate shall be retained in the files of the collector of customs. Whenever the radio inspector is absent from his home port he will notify the collector of customs, who will arrange for the collection of certificates and survey of equipment.

178. Where a steamer subject to the radio law is without the apparatus and the operators prescribed, or either of them, and is about to attempt to leave port, the radio inspector or customs officer visiting the vessel shall:

(a) Furnish the master with a memorandum (stub of Form 771) of the particulars in respect of which the law has not been complied with and the penalty;

(b) If convenient, notify the vessel's agents or the proper person in charge of the apparatus so that the necessary corrections may be made before sailing.

179. If a steamer clears in violation of the law the radio inspector or customs officer shall submit to the collector of customs of the port a written report, stating the exact nature of the violation, the section of the law violated, and the penalties involved and all of the circumstances in connection therewith which will be of service to the collector and to the Secretary of Commerce in determining what action shall be taken. A copy of the report will be forwarded to the Commissioner of Navigation.

180. Statements should be obtained from operators, ships officers, or other witnesses at the time the violation is discovered and should accompany the report to the collector of customs.

181. The collector of customs will report the case to the Secretary of Commerce in the usual manner as a navigation fine case.

182. Merchant vessels chartered by the United States Government are subject to the Act of August 13th, 1912, in every case, if the radio apparatus is owned and operated by a commercial company.

183. Merchant vessels chartered by the United States Government for the transportation of persons or supplies are subject to the requirements of the ship act (Act of July 23rd, 1912), if the vessel is controlled and operated by the owners. Vessels commanded wholly or in part by Government officers are not subject to the ship act.

184. Government vessels or vessels chartered by the Government are subject to the act of August 13th, 1912, if the radio equipment is owned and operated by private interests.

185. The ship act does not authorise the refusal of clearance in case of violation of its provisions, but specifically provides for the imposition of a fine in a sum not more than \$5,000.

186. The act does not apply to a vessel at the time of entering a port of the United States. Radio inspectors and customs officers may, however, accept as evidence of the efficiency of the operators and the skill of an operator messages shown to have been transmitted and received by him over a distance of at least 100 miles, by day, during the voyage to the United States.

OPERATORS ON FOREIGN VESSELS.

187. In so far as licensed operators are concerned a sharp distinction should be drawn between the Act of July 23rd, 1912, which requires apparatus and operators for radio communication on steamers and the Act of August 13th, 1912, to regulate radio communication.

188. The Act of July 23rd, 1912, amending the Act of June 24th 1910, is designed to promote safety at sea through the employment of apparatus and operators to transmit and receive distress calls and other calls relating to perils and aids to navigation. It provides that in the case of American and foreign vessels subject to its provisions "the radio equipment must be in charge of two or more persons skilled in the use of such apparatus." This Act does not require that

the operators shall be licensed, and the penalty prescribed in section 3 of the Act is not incurred by the master of a vessel whose operators are "skilled in the use of such apparatus," even though they may not be licensed.

189. The Act of August 13th, 1912, is designed to execute in behalf of the United States the International Radiotelegraphic Convention and thus to promote orderly exchanges by radio communication. For this purpose the International Radiotelegraphic Convention (Service Regulations) provides that the service of the station on shipboard shall be carried on by a telegraph operator holding a certificate issued by the Government to which the vessel is subject.

190. Section 3 of the Act of August 13th, 1912, carries out this provision of the International Convention by providing licenses for operators on American vessels. If an unlicensed person serves in charge or in supervision of the use and operation of the apparatus both he and his employer are liable to a fine of not more than \$100 or imprisonment for not more than two months or both. This section and penalty do not apply to operators on foreign ships. But operators on the ships of foreign nations signatory to the International Radiotelegraphic Convention, as shown above, are required to have certificates or licenses from their own governments, and if not so certificated, the obligations of the convention have not been observed. The convention in the Service Regulations provides for this situation.

191. The Act of July 23rd, 1912, as stated, requires that on American and foreign ships the operators must be "skilled in the use of such apparatus," but does not require that they must be licensed. To facilitate commerce and simplify administration, operators presenting American licenses or foreign certificates are accepted as "skilled in the use of such apparatus," except where there may be special reasons to doubt the operator's skill or reliability. Where operators on American or foreign ships do not have such licenses or foreign certificates, radio inspectors or customs officers under the Act of July 23rd, 1912, may accept other competent evidence of skill or may examine such operators.

OFFICIAL INTERNATIONAL LIST OR COAST AND SHIP RADIO STATIONS OF THE WORLD AND STATION RATES.

192. The list of land and ship stations of the United States including amateurs, giving call letters, wavelengths, nature of service, etc., can be procured from the Superintendent of Documents, Government Printing Office, Washington, D.C., at a nominal price.

193. Supplements to this list are issued monthly and the list is revised annually, as of July 1st. Information concerning amateur stations will not be included in the supplements, but in the annual edition only.

194. The introduction to the list of "Radio Stations of the United States" contains information concerning the assignment of international and amateur call letters.

195. A copy of the Official Berne List, and supplements as issued, are required as a part of the equipment of every station open to general public service.

196. The International List of Radio Stations of the World (edition in English) can be procured from the International Bureau of the Telegraphic Union (Radiotelegraphic Service), Berne, Switzerland.

197. In addition to the information contained in the pamphlet of the United States stations, published by the Bureau of Navigation, the international list shows geographical locations, normal ranges in nautical miles, radio systems and rates.

198. The international list includes the Government and commercial land and ship stations of the United States. The list is divided into three parts. The first part contains a list of ship stations, grouped by countries and arranged alphabetically; the second part contains a list of land stations arranged in the same manner; and the third part contains tables of land line and cable charges from coast radio stations to inland and various other points. In computing the total word rate applicable to a radiogram from a ship station to an inland point or *vice versa*, the three rates must be added. The rates in the international list are stated in francs. For approximate purposes 1 franc equals 20 cents and 5 centimes equals 1 cent. Supplements to the international list will be issued monthly, and will contain new stations and tables of alterations.

199. The International Alphabetical List of Call Letters (stations of the world) is also issued by the international bureau at Berne and supplements will be issued monthly.

200. Neither the international list proper nor the supplements will contain a list of amateur stations.

201. Inquiries as to the subscription price of these lists should be made direct to the Berne bureau, at the address given above. (See par. 196.) Remittances to Berne should be made by international postal money order.

MISCELLANEOUS INFORMATION.

202. Stations equipped to receive only do not require licenses.

203. Operators of receiving stations do not require licenses, but all persons are required to maintain secrecy in regard to messages, as provided in the Act of August 13th, 1912, nineteenth regulation of section 4.

204. Distances under the radio laws are computed in nautical miles.

205. No fees are charged for any operator or station license.

206. Licensed stations must be operated by or under the direct supervision of properly licensed operators.

207. Amateur stations within five miles of naval or military stations need not have been in actual operation on or before August 13th, 1912, to obtain a license for a restricted amateur station.

208. The master of a vessel shall have the right to censor all messages addressed to or transmitted by a radio telegraph station on board his vessel, but such master shall not divulge to any person (other than the properly authorised officials of the Government, or a competent legal tribunal) or make any use whatever of any message coming to his knowledge through the exercise of such censorship, nor shall the master or any operator divulge to any person (other than the properly authorised officials of the Government, or a competent legal tribunal) or make any use whatever of any message (other than a message of distress) coming to his knowledge and not intended for the said station.

209. The transmission of superfluous signals by any ship or coast station is absolutely prohibited; trials and practices are forbidden except under such circumstances as to preclude the possibility of interference with other stations.

210. No person shall transmit or make a signal containing profane or obscene words or language.

211. Additional or amendatory regulations will be issued from time to time as they may appear necessary.

Radio Service Form 752.

CERTIFICATE OF RADIO INSPECTION. PORT OF

This is to certify that I have to-day examined the apparatus for radio communication on the s.s. _____, of which _____ is master, about to leave this port for _____, and I have found the same efficient and in good working order, as prescribed by the Act of June 24th, 1910, as amended by the Act of July 23rd, 1912.

(Signed)

Radio Inspector.

(Or)

Customs Inspector.

Radio Service Form 753.

MASTER'S CERTIFICATE OF RADIO APPARATUS.

NOTICE.

The radio equipment must be in charge of two or more persons skilled in the use of such apparatus, one or the other of whom shall be on duty at all times while the vessel is being navigated. Such equipment, operators, the regulation of their watches, and the transmission and receipt of messages, except as may be regulated by law or international agreement, shall be under the control of the master, in the case of a vessel of the United States; and every wilful failure on the part of the master to enforce at sea the provisions of this paragraph as to equipment, operators, and watches shall subject him to a penalty of one hundred dollars. (Act of July 23rd, 1912.)

PORT OF

This is to certify that I have to-day examined the apparatus for radio communication on the S.S. _____, of which I am master, about to leave this port for _____, and I have found the same efficient and in good working order, as prescribed by the Act of June 24th, 1910, as amended by the Act of July 23rd, 1912.

LICENSE FOR GENERAL PUBLIC SERVICE COAST RADIO STATION.

DEPARTMENT OF COMMERCE.

BUREAU OF NAVIGATION.

RADIO SERVICE.

Pursuant to the Act to regulate radio communication, approved August 13th 1912, _____, a citizen of the State of _____

a company incorporated under the laws of the State of _____ having _____

* Strike out is or is not as the case may be.

† Strike out efficient or inefficient as the case may be.

applied therefor, is hereby granted by the Secretary of Commerce for a period of on and subject to the restrictions and conditions hereinafter stated and revocable for cause by him, this license to use or operate the apparatus for radio communication (identified in the schedule hereinafter) located in the State of _____ city or town of _____, for the purpose of transmitting to and receiving from ship stations and other land stations general public correspondence, Government and service correspondence, and distress signals and messages, at rates of compensation not in excess of those fixed by the international agreement to which the Government of the United States has adhered, which have been submitted to and approved by the Secretary of Commerce, as included in the schedule hereinafter.

2. The use or operation of apparatus for radio communication pursuant to this license shall be subject also to the articles and regulations established by the International Radiotelegraphic Convention, ratified by the Senate of the United States and caused to be made public by the President "to the end that the same and every article and clause thereof may be observed and fulfilled with good faith by the United States and the citizens thereof, and shall be subject also to such regulations as may be established from time to time by authority of subsequent acts and treaties of the United States.

3. The authority conferred by this license is subject to the provisions of the Act of February 4th, 1887, entitled "An Act to regulate commerce," as amended by the Act of June 18th, 1910, so far as the licensee may be within the operation of said Act, and except as provided in the Act of August 13th, 1912, or in the International Radiotelegraphic Convention and regulations made part thereof, the station shall transmit all messages offered by those who tender lawful rates on equal terms without discrimination, whether as regards rates, order of transmission, or otherwise.

4. The licensee shall render to the Secretary of Commerce such accounts as the Secretary of Commerce shall direct in respect of all charges due or payable under the International Radiotelegraphic Convention in respect of messages exchanged between the station hereby licensed and other stations and shall pay to the Secretary of Commerce, at such times and in such manner as the Secretary of Commerce shall direct, all sums which shall be due from the licensee under such accounts.

5. The apparatus shall at all times while in use and operation be in charge or under the supervision of a person or persons licensed for that purpose by the Secretary of Commerce, and the operator of the apparatus shall not willfully or maliciously interfere with any other radio communication.

6. The station shall give absolute priority to signals and radiograms relating to ships in distress; shall cease all sending on hearing a distress signal; and, except when engaged in answering or aiding the ship in distress, shall refrain from sending until all signals and radiograms relating thereto are completed.

7. The station during the hours of operation shall listen-in at intervals of not less than 15 minutes and for a period of not less than two minutes with the receiver tuned to receive messages of 300 metres wavelength.

8. The station shall use the minimum amount of energy necessary to carry out any communication desired, except in case of signals or radiograms relating to vessels in distress.

9. The station shall exchange radiograms with any other commercial station and with any ship station without distinction of the radio systems adopted by such stations.

10. The station shall not use a transmitter during the first 15 minutes of each hour, local standard time, except for distress signals, whenever the Secretary of Commerce by notice in writing shall require it to observe a division of time, pursuant to the Twelfth Regulation by the Act of August 13th, 1912.

11. The President of the United States in time of war or public peril or disaster is authorised by law to close the station and cause the removal therefrom of all radio apparatus or may authorise the use or control of the station or apparatus by any department of the Government upon just compensation to the owners.

12. The Secretary of Commerce and Collectors of Customs or other officers of the Government authorised by him may at all reasonable times enter upon the station for the purpose of inspecting and may inspect any apparatus for radio communication of such station and the operation and operators of such apparatus.

13. The apparatus shall not be altered or modified in respect of any of the particulars mentioned in the following schedule, except with the approval of the Secretary of Commerce.

SCHEDULE OF STATION AND APPARATUS.

WAVELENGTHS.

The normal sending and receiving wave-length shall be metres, and no other wave-length shall be used for general public correspondence with any foreign ship or foreign coast station, except for long-range public service or purposes other than general public correspondence.

The station shall at all times, except as provided in the seventh paragraph of this license, be ready to receive messages of such wavelengths as are required by the International Radiotelegraphic Convention; shall be prepared to use two sending wavelengths, one of 300 metres and one of 600 metres, as required by the International Radiotelegraphic Convention in force; and tuning positions on the receiver shall be plainly marked: Provided, That the Secretary of Commerce may, in his discretion, change the limit of wavelength reservations to accord with any international agreement to which the United States is a party.

No. LICENSE FOR SHIP RADIO STATION. DEPARTMENT OF COMMERCE, BUREAU OF NAVIGATION, RADIO SERVICE.

L Pursuant to the Act to regulate radio communication, approved August 13th, 1912
 a citizen of the State of

For long-range public service and for any service other than general public correspondence the station is authorised to use the following additional wavelengths under 600 or over 1,600 metres:

Metres,; Metres,; Metres,
 Metres,; Metres,

The energy, if radiated by the transmitter in two or more wavelengths as indicated by a sensitive wavemeter, shall not in any one of the lesser waves exceed 10 per cent. of that in the greatest; and the logarithmic decrement per complete oscillation in the wave trains shall not exceed two-tenths, except when sending signals or messages relating to vessels in distress.

..... a company incorporated under the laws of the State of, having applied therefor, is hereby granted by the Secretary of Commerce for a period of

on and subject to the restrictions and conditions hereinafter stated and revocable for cause by him, this license to use or operate the apparatus for radio communication (identified in the schedule hereinafter) on the

(Type of vessel.)

....., a vessel of the

(Name of vessel.)
 United States, official number, for the purpose of transmitting to and receiving from other ship stations and land stations general public correspondence, Government and service correspondence, and distress signals and messages, at rates of compensation not in excess of those fixed by the International Agreement to which the Government of the United States has adhered, which have been submitted to and approved by the Secretary of Commerce, as included in the schedule hereinafter.

2. The use or operation of apparatus for radio communication pursuant to this license shall be subject also to the articles and regulations established by the International Radiotelegraphic Convention, ratified by the Senate of the United States and caused to be made public by the President "to the end that the same and every article and clause thereof may be observed and fulfilled with good faith by the United States and citizens thereof," and shall be subject also to such regulations as may be established from time to time by authority of subsequent acts and treaties of the United States.

3. The authority conferred by this license is subject to the provisions of the act of February 4th, 1887, entitled "An Act to Regulate Commerce," as amended by the Act of June 18th, 1910, so far as the licensee may be within the operation of said Act, and except as provided in the Act of August 13th, 1912, or in the International Radiotelegraphic Convention and regulations made part thereof, the station shall transmit all messages offered by those who tender lawful rates on equal terms without discrimination, whether as regards rates, order of transmission, or otherwise.

4. The licensee shall render to the Secretary of Commerce such accounts as the Secretary of Commerce shall direct in respect of all charges due or payable under the International Radiotelegraphic Convention in respect of messages exchanged between the station hereby licensed and other stations, and shall pay to the Secretary of Commerce, at such times and in such manner as the Secretary of Commerce shall direct, all sums which shall be due from the licensee under such accounts.

5. The apparatus shall at all times while in use and operation be in charge or under the supervision of a person or persons licensed for that purpose by the Secretary of Commerce, except when in case of emergency the Collector of Customs by authority of the Secretary of Commerce shall issue a temporary permit, in lieu of a license, to the operator. The operator of the apparatus shall not wilfully or maliciously interfere with any other radio communication.

6. The station shall give absolute priority to signals and radiograms relating to ships in distress; shall cease all sending on hearing a distress signal; and, except when engaged in answering or aiding the ship in distress shall refrain from sending until all signals and radiograms relating thereto are completed.

7. The station shall be prepared to send the international signal of distress and distress signals on the normal wavelength designated by the International Radiotelegraphic Convention in force with sufficient power to enable them to be received by day over sea a distance of 100 nautical miles by a ship station equipped with apparatus for sending and receiving equal in all essential particulars to the apparatus of the station herein licensed.

8. The station shall use the minimum amount of energy necessary to carry out any communication desired, except in case of signals or radiograms relating to vessels in distress.

9. The station shall exchange radiograms with any other ship station without distinction of the radio systems adopted by such stations.

10. The station shall not use, except for sending signals of distress or signals and radiograms relating thereto, or when, owing to unusual circumstances, communication can be established only by means of an increase of power, a transformer input exceeding 1 kW., or exceeding $\frac{1}{2}$ kW. when within five nautical miles of a naval or military station.

11. The President of the United States in time of war or public peril or disaster is authorised by law to close the station and cause the removal therefrom of all radio apparatus, or may authorise the use or control of the station or apparatus by any department of the Government upon just compensation to the owners.

12. The Secretary of Commerce and Collectors of Customs or other officers of the Government authorised by him may at all reasonable times enter upon the station for the purpose of inspecting, and may inspect any apparatus for radio communication of such station and the operation and operators of such apparatus.

13. The apparatus shall not be altered or modified in respect of any of the particulars mentioned in the following schedule, except with the approval of the Secretary of Commerce.

WAVELENGTHS.

The normal sending and receiving wavelength shall be 600 metres, and the station shall be prepared to use two sending wavelengths, one of 600 metres and one of 300 metres, as required by the International Radiotelegraphic Convention in force; and tuning positions shall be plainly marked: Provided, That the Secretary of Commerce may, in his discretion, change the limit of wavelength reservations to accord with any international agreement to which the United States is a party.

A wavelength of metres and the following additional wavelengths not exceeding 600 metres may be employed as authorised by law and treaty:

Metres,; Metres,; Metres,
 Metres,; Metres,; Metres,
 Metres,; Metres,

The energy, if radiated by the transmitter in two or more wavelengths as indicated by a sensitive wavemeter, shall not in any one of the lesser waves exceed 10 per cent. of that in the greatest; and the logarithmic decrement per complete oscillation in the wave trains shall not exceed two-tenths, except when sending signals or messages relating to vessels

in distress and in sending distress signals when the transmitter may be tuned to create a maximum of interference with a maximum of radiation.

The station in general shall transmit its radiograms to the nearest coast station. The sender shall have the right, however, to designate the coast station through which he desires to have his radiograms transmitted, and his wishes shall be complied with only if the transmission can be effected without interfering with the service of other stations, or the shipboard station shall wait until such coast station shall be the nearest as provided by the International Convention in force.

Satisfactory proof has been furnished that the station was actually operating August 13th, 1912.

This license will expire on the
day of 19

LICENSE FOR LAND RADIO STATION.

Class

DEPARTMENT OF COMMERCE.

BUREAU OF NAVIGATION.

RADIO SERVICE.

M Pursuant to the Act to regulate radio communication, approved August 13th, 1912, a citizen of the State of _____ a company incorporated under the laws of the State of _____, having applied therefore, is hereby granted by the Secretary of Commerce for a period of _____ on and subject to the restrictions and conditions hereinafter stated and revocable for cause by him, this license to use or operate the apparatus for radio communication (identified in the schedule hereinafter) for the purpose of transmitting to and receiving from ship stations and other land stations public correspondence, Government and service correspondence, and distress signals and messages at rates of compensation not in excess of those fixed by the international agreement to which the Government of the United States has adhered, which have been submitted to and approved by the Secretary of Commerce, as included in the schedule hereinafter, or for the purpose of conducting experiments for the development of the science of radio communication or the apparatus pertaining thereto, to carry on special tests, using any amount of power or any wavelengths, at such hours and under such conditions as will insure the least interference with the sending or receipt of commercial or Government radiograms, of distress signals and radiograms, or with the work of other stations, the purpose of the station being designated by the classification at the head of this license.

2. Public correspondence or limited commercial correspondence authorized by this license shall be limited to certain stations, ships or lines of ships named hereinafter, which designation is authorized in view of the nature of the service and is independent of the radio system employed.

3. The use or operation of apparatus for radio communication pursuant to this license shall be subject also to the articles and regulations established by the International Radiotelegraphic Convention, ratified by the Senate of the United States and caused to be made public by the President, and shall be subject also to such regulations as may be established from time to time by authority of subsequent Acts and treaties of the United States, in so far as they apply to the class of station indicated by this license.

4. The authority conferred by this license is subject to the provisions of the Act of February 4th, 1887, entitled "An Act to Regulate Commerce," as amended by the Act of June 18th, 1910, so far as the licensee may be within the operation of said Act, and except as provided in the Act of August 13th, 1912, or in the International Radiotelegraphic Convention and regulations made part thereof, the station shall transmit all messages offered by those who tender lawful rates on equal terms without discrimination, whether as regards rates, order of transmission, or otherwise.

5. The licensee shall render to the Secretary of Commerce such accounts as the Secretary of Commerce shall direct in respect of all charges due or payable under the International Radiotelegraphic Convention in respect of messages exchanged between the station hereby licensed and other stations, and shall pay to the Secretary of Commerce, at such times and in such manner as the Secretary of Commerce shall direct, all sums which shall be due from the licensee under such accounts.

6. The apparatus shall at all times while in use and operation be in charge or under the supervision of a person or persons licensed for that purpose by the Secretary of Commerce, and the operator of the apparatus shall not wilfully or maliciously interfere with any other radio communication.

7. The station shall give absolute priority to signals and radiograms relating to ships in distress; shall cease all sending on hearing a distress signal; and, except when engaged in answering or aiding the ship in distress, shall refrain from sending until all signals and radiograms relating thereto are completed.

8. The station shall use the minimum amount of energy necessary to carry out any communication desired, except in case of signals or radiograms relating to vessels in distress.

9. The station shall not use a transmitter during the first fifteen minutes of each hour, local standard time, except for distress signals, whenever the Secretary of Commerce by notice in writing shall require it to observe a division of time, pursuant to the Regulation 12 of the Act of August 13th, 1912.

10. The President of the United States in time of war or public peril or disaster is authorized by law to close the station and cause the removal therefrom of all radio apparatus, or may authorize the use or control of the station or apparatus by any department of the Government upon just compensation to the owners.

11. The Secretary of Commerce and Collectors of Customs or other officers of the Government authorised by him may at all reasonable times enter upon the station for the purpose of inspecting and may inspect any apparatus for radio communication of such station and the operation and operators of such apparatus.

12. The apparatus shall not be altered or modified in respect of any of the particulars mentioned in the following schedule, except with the approval of the Secretary of Commerce.

NOTICE TO BERNE BUREAU.

S The Minister of Marine of the United States of America has notified to the Berne Bureau that the following information is to be published:—

1. The Departments of the United States Government which are concerned with wireless telegraphy regret that they have not yet been able to make arrangements with the land telegraph of the United States owing to the fact that these are in the hands of commercial companies, and have nothing to do with the Government. The idea was to arrange for the free transmission over the land telegraph, in accordance with Article 14, paragraph 2, of the Rules of Service of the London Convention. The information to be transmitted free of charge was all such as related to the date and the hour of the handing in of radio-telegrams on board ship. But the transmission of such information over land lines being subject to a tax, the Government of the United States cannot, at present, conform strictly to this rule of the Convention. The declaration of the American delegation contained in Article 2 of the Final Protocol made provision for such a possible outcome, although its exact nature was not actually set forth.

2. Multiple radiotelegrams, such as are mentioned in article 38, paragraph 5, of the Rules of Service, will be accepted as multiple messages in all wireless transmission between ship and shore stations, but all the companies operating land telegraph lines in the United States will consider, and will charge for, a multiple wireless message as consisting of so many individual telegrams as the addresses it bears may indicate.

3. The United States is not a member of the International Telegraphic Union and consequently is not bound to execute the rules laid down in Article 38, paragraph 8, of the London Convention Rules of Service concerning urgent radiotelegrams. The laws of the United States regulating all reciprocal arrangements between the States forbid the use of the privilege, and consequently all telegraph companies will not allow any priority in favour of telegrams for which any additional tax may have been paid.

T An Act to authorise the President of the United States to arrange and participate in an international conference to consider questions relating to international communication.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States be, and he is

hereby, requested and authorised in the name of the Government of the United States to call, in his discretion, an international conference to assemble in Washington, and to appoint, by and with the advice and consent of the Senate, representatives to participate therein, to consider all international aspects of communication by telegraph, telephone, cable, wireless telephone, and wireless telegraphy, and to make recommendations with a view to providing the entire world with adequate facilities for international communication on a fair and equitable basis.

SEC. 2.—That the sum of \$75,000, or so much thereof as may be necessary, is hereby appropriated out of any money in the Treasury not otherwise appropriated, the same to be disbursed under the direction and in the discretion of the Secretary of State for expenses incidental to the conference, including personal services in the District of Columbia notwithstanding the provisions of any other Act: Provided, That no part of said sum shall be used in entertainment or for the purchase of medals and badges.

Approved, December 17th, 1919.

U. S. RADIO COMPASS STATIONS.

U (See under U.S.A. in Direction Finding Section)

PUBLIC RESOLUTION:

No. 48—66TH CONGRESS.

V Joint Resolution to authorise the operation of Government-owned Radio Stations for the use of the general public, and for other purposes.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled: That all land, ship and airship radio stations, and all apparatus therein owned by the United States may be used by it for receiving and transmitting messages relating to Government business, compass reports and the safety of ships.

SEC. 2. That the Secretary of the Navy is hereby authorised, under terms and conditions and at rates prescribed by him, which rates shall be just and reasonable, and which, upon complaint, shall be subject to review and revision by the interstate Commerce Commission, to use all radio stations and apparatus, wherever located, owned by the United States and under the control of the Navy Department—(a) for the reception and transmission of press messages offered by any newspaper published in the United States, its territories or possessions, or published by citizens of the United States in foreign countries, or by any press association of the United States, and (b) for the reception and transmission of private commercial messages. Provided: That the rates fixed for the reception and transmission of commercial messages, other than press messages, shall not be less than the rates charged by privately-owned and operated stations for like messages and service: Provided further, That the right to use such stations for any of the purposes named in this section shall terminate and cease as between any countries or localities or between any locality and privately operated ships, whenever privately owned and operated stations are capable of meeting the normal communication requirements between such countries or localities or between any locality and privately operated ships, and the

Secretary of Commerce shall have notified the Secretary of the Navy thereof, and all rights conferred by this section shall terminate and cease in any event two years from the date this resolution takes effect.

Sec. 3. That all stations owned and operated

by the Government, except as herein otherwise provided, shall be used and operated in accordance with the provisions of the Act of Congress entitled "An Act to regulate radio communication," approved August 13th, 1912.

Approved, June 5th, 1920.

URUGUAY

(See also Map Section)

THE independence of the Republic of Uruguay, originally part of the Spanish Viceroyalty of Rio de la Plata, and later on a Province of Brazil, was declared on August 25th, 1825, and recognised by Treaty on August 27th, 1828. The constitution was sworn on July 18th, 1830, and reformed in January, 1918. Legislation is administered by a Parliament of two Houses, the Executive being in the hands of a President elected every four years, and a National Administrative Council composed of nine members. The total area of the 19 departments into which the country is divided is estimated at 72,153 square miles with a population of 1,494,953. The capital city is Montevideo, situated on the northern bank of the River Plate Estuary.

CONTROL.

Wireless telegraphy in Uruguay is controlled by the Government, the department in charge being the Ministry of War and Marine. The Government ship stations are also under the control of the Minister of War and Marine. There are no privately owned stations. There are no radiotelegraphic clubs or societies, in fact wireless telegraphy is entirely a Government monopoly.

ORGANISATION.

The installation of wireless telegraphy in Uruguay was authorised by a Government Decree dated June 22nd, 1910. This Decree provided for one long-distance station at Montevideo, minimum range 500 miles; two situated respectively at Paso de los Toros and Rivera (Northern Frontier), with minimum range of 372 miles; two respectively situated at Lobos Island and the English Bank, each with minimum range of five miles; besides installations on the various Government vessels. By the end of the year 1911 the service (supplemented by two Military Field Stations) was in working order.

The Montevideo station, opened to the public in December, 1911, and standing on a hill three miles from the river, is the only installation doing international work. Its location is called Cerrito de la Victoria, and the wireless station generally goes by the name of "Cerrito." The installations situated at Rivera and Paso de los Toros are employed solely for military purposes, and only in times of crisis, should a breakdown of the ordinary wired service eventuate, are they used for public messages.

ADMINISTRATION.

The first Decree regulating the subject was issued by the Ministry of War and Marine on September 5th, 1911, and was followed by a decree dated January, 1912. Under its provisions *all ships calling at the ports of the Republic and destined for passenger service are obliged to be fitted with wireless apparatus.*

We print here the text of both the Decrees above referred to:—

A—Decree of September 5th, 1911.

B—Decree of January, 1912.

C—Decree replacing the Superior Decree of October 20th, 1914, with the Superior Resolution of November 14th, 1919.

DECREE OF SEPTEMBER 5TH, 1911.

A 1. The National Wireless Telegraphy Office is under the direct control of the Ministry of War and Marine, with the Engineer Inspector-General as its head.

2. The National Wireless Telegraph Office is in charge of and controls all the radiotelegraphic stations, whether fixed or military movable ones, on vessels or on lighthouses, together with their staff, apparatus and installations.

3. The Inspector-General will at such times and under such circumstances as he thinks proper make visits of inspection of the stations in order to take personal cognisance of their requirements, and he exercises in regard to the staff, whether military or civil, the character of a staff commander.

4. On the occasions of manœuvres the Inspector-General will designate the country stations which are to take part in accordance with the instructions he receives as to the requirements of the occasion.

5. It is one of the duties of the National Wireless Telegraph Office to propose to the superior department the construction of fresh stations and to report regarding the means for acquiring the same.

6. The Inspector-General controls the sums received for transmission of telegrams, which sums shall be deposited in the Bank of the Republic to the order of the Minister of War and Marine.

7. The National Wireless Telegraph Office will make contracts with the General Post and Telegraph Office and with the shipping companies to be submitted for approval to the Minister of War and Marine; similarly the office is empowered to draw up with the administrations of the neighbouring States radiotelegraphic agreements with the object of improving and amplifying the international wireless telegraph service, all of which shall be submitted for approval by the higher department.

8. The Minister of War and Marine will notify the International Office in Berne of the creation of the National Wireless Telegraph Office in Uruguay, so that in future all questions concerning wireless telegraphy in Uruguay may be referred direct to it.

9. The Inspector-General will report quarterly to the Minister of War and Marine regarding the general conditions and working of the service under his charge, and will compile an annual memorandum upon the general work of his department.

DECREE OF JANUARY, 1912.

B 1. Commencing from May 1st of the present year (1912) all the ships carrying passengers between the harbours of the Republic and those of foreign countries shall be fitted with radiotelegraph installations.

2. The said installations shall be designed to receive and transmit telegrams up to a distance of not less than one hundred kilometres on the ships of river navigation, and four hundred kilometres on those of the oceanic navigation.

3. The installations shall be permanently kept in good conditions of working, and capable of intercommunicating with the stations of the Republic.

4. The stations shall be in charge of persons well acquainted with the use of radiotelegraph apparatus.

5. The service of the stations shall be entirely in accordance with the provisions of the International Radiotelegraph Convention.

6. The agents of the companies will inform, before expiration of the time fixed, the General Inspector of the National Service of Wireless Telegraphy of the characteristics, system, power, etc., of the radiotelegraph apparatus to be fitted on the ships of their companies.

7. The ships which after expiration of the time fixed by Article 1 have not complied with the provisions of this Decree shall not be authorised to carry passengers in the harbours of the Republic.

8. Those ships which do not keep their wireless apparatus in proper working conditions shall be liable to have applied to them the penalty specified in the previous article (7).

9. The General Inspector of the National Service of Wireless Telegraphy is hereby entrusted with seeing that the provisions of this Decree are duly complied with.

C ART. 1.—The Superior Decree of October 20th, 1914, referring to installations of Wireless Telegraphy in this country, as also the modifications made to same contained in the superior resolution of November 14th, 1919, have been cancelled.

ART. 2.—It is allowed to install complete radiotelegraphic and radiotelephonic stations or receiving stations only in the territory of the Republic, except in places where Government stations are installed, nor at a distance of under 50 kilometres from the River Plate or the frontier with Argentina when not in towns of any

importance. The radiotelegraph stations merely for study and those of radiotelephonic which cannot be used for telegraphy can also be installed in places where Government stations exist.

ART. 3.—The installation and working of the radiotelegraphic stations authorised by the aforementioned article will be subject to the following conditions :—

(a) In every case when installing a station, if it be in the Department of Montevideo, the person interested must previously communicate in writing to the General Inspection of Wireless Telegraphy the following data :— Use for which it is destined, class and system of same with specification of power in the antenna and origin of energy with which it will work, class of antenna, height and length of same, place where it will be installed and name of the proprietor, forwarding also a diagram or plan with a memorandum describing the projected installation. In other departments the aforementioned communication should be made to the respective military authorities or to the Chief of Police, who will have it forwarded to the General Inspection of Wireless Telegraphy and there being no observations to be made the data will be noted in the register, a serial number will be allotted and the wavelength with which it may work will be fixed ; installation may then be commenced and when it has once been inspected and tested, communication can be commenced.

In the case of a Receiving Station the person interested will communicate to the corresponding authorities in accordance with the aforementioned giving in such an event only the details which may be requested from him.

(b) They may only be destined for private use or for study, it being absolutely prohibited to carry on a public service or to exploit it in any way.

(c) They will be used exclusively for the communications in the country and may not have a larger range than 20 kilometres for studying purposes, and all others not over 100 kilometres if there be any Government station in that radius and up to 200 kilometres if no such station exists, and all these must only work with the wavelength approved for them.

(d) The stations which are not for private use or purely for reception can only be worked by persons having a license as operators at least of the third-class, issued by the General Inspection of Wireless Telegraphy.

(e) To send messages to parts where there are Government stations all transmission must be made to these stations, payment being made at half the tariff rate for messages.

In no case must an installation be made at a shorter distance from those of the Government, as follows :—In Montevideo : for study, 2 kilometres, and all others at 10, and in the interior at one and five respectively.

(g) In addition to the preceding conditions, the stations will be subject to the dispositions and existing or future regulations for telegraphy, wireless or otherwise, and in the event of these regulations not being followed or when the Government so desires, they can be closed by the respective authorities, and the proprietors can have no right to claims or indemnifications whatsoever.

ART. 4.—For the installation and working of radiotelephonic stations which can also communicate radiotelegraphically, the aforementioned conditions will be observed, and for those only radiotelephonic, the following :—

(h) They can be employed for private or business purposes, as also for public use, for study, educational, information, commercial, meteorological, advertising, concerts and, in general, everything in connection with intellectual instruction or of general interest.

(i) When they are employed for the preceding purposes, that is, for commercial or exploitation purposes, the person interested must previously apply in writing to the Ministry of War and Marine for the technical authorisation corresponding to the installation of the station or stations which will be used for the said purposes, and there must be given in the respective application the same information as is required in (a) of Art. 3 of this Decree. The Ministry of War and Marine will pass it to the General Inspection of Wireless Telegraphy who, if they have no technical observations to make, will note down the characteristics in the respective register, will allot it a serial number and will then forward to the petitioner a certificate of authorisation for the requested installations.

(j) For the exploitation authority which must come after the technical authorisation, those interested must apply to the corresponding Ministry in accordance with existing or future regulations to that effect.

(k) The installation of stations not destined for exploitation purposes as also for those of study or solely receiving stations, will come under the regulations in (a) of Art. 3, with the difference that the wavelength of working will be determined by the respective authorities.

(l) The General Inspection of Wireless Telegraphy will put at the disposal of the Directorate-General of Posts, Telegraphs and Telephones the bands of wavelengths destined for the use of private radiotelephonic stations, and will reserve those corresponding to the Government stations.

(ll) The stations destined for exploitation must be attended by native operators who must hold a first-class professional certificate, issued by the General Inspection of Wireless Telegraphy. These stations may not operate without having been inspected previously by the aforementioned authorities, and who may also inspect the working of same if they deem it necessary.

(m) Radiotelephonic communications can be made at any distance within the country, but for the exterior only up to 50 kilometres, with the exception of those made from the Capital of the Republic, and if for ships can be made up to a distance of 100 kilometres, and if for other parts up to 250 kilometres. When the State possess their own stations, distant communications for the exterior and interior must be made by said stations. In every case the wavelengths authorised by the authorities only will be used, and the Cerrito Station or others that may be available in future will be directed to control them and at the same time to see that the said communications conform to the regulations in force.

(u) In addition to the preceding established conditions the working of the stations will be subject to the existing and future regulations on wireless or other telephones as far as applicable, and in the event of the regulations not being adhered to, the said authorisation can be taken away and the stations closed by the authorities as deemed convenient and the proprietors shall have no claim to indemnification whatsoever.

ART. 5.—Ships carrying the National flag may install radiotelephonic stations, subject to the same regulations as above stations and they must also conform to any international conventions subscribed by this country.

ART. 6.—The General Inspection of Wireless Telegraphy will be in charge of watching and controlling by means of their own stations, the observation of the proper compliance with all the regulations of this Decree, and all operators of wireless telegraphy must comply with and obey any professional direction relating to the service, which may be made by the Government's stations, which shall always have preference in the transmission of any communications.

ART. 7.—Communicate, etc.

URUGUAY, BOLETIN OFICIAL.

August 14th, 1922.

VENEZUELA

(See also Map Section)

THE Republic of Venezuela was formed in 1830 by secession from the other members of the Republic of Colombia. The Constitution in force is that of June 13th, 1914. Legislative authority is vested in a Congress of two Chambers, whilst the Executive power is exercised by a President in conjunction with Cabinet Ministers. The twenty states, two territories and one Federal district of which it is composed cover an area of 398,594 square miles with a population of 2,411,952.

The territory included under the Administration of Venezuela is the same as that which was known, at the time South America was a Spanish colony, as "Capitania General de Venezuela," and extends from British Guiana on the east to the Republic of Colombia on the west. Its northern boundary is the Caribbean Sea, and its southern boundary the Republic of Brazil. There are included in the Venezuelan territory many islands in the Caribbean Sea, the principal being Margarita, Cubagua, Los Roques, Coche, Tortuga.

CONTROL AND ORGANISATION.

Radiotelegraphy in Venezuela is controlled by the Government, the Department in charge being the Ministerio of Fomento assisted by the Director of Federal Telegraphs and Telephones.

There are no privately owned Radiotelegraph stations, neither Clubs or Societies.

The Ministerio has granted permission to several Oil Exploration Companies to erect Radiotelephone stations to communicate from the oilfields to the offices, but no such station has yet been erected.

There exist at present eight stations in the different parts of the country, each open for public service.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Dr. Antonio Alamo ..	Minister of Public Works..	Caracas
Gral. Julio Hidalgo ..	Director-General of Federal Telegraphs and Telephones	Caracas.
Dr. H. R. von Eichwald	Chief of Radio Communication ..	Caracas.
Lieut. Antonio Toro Key	Director of National Radio School ..	Caracas.

The plan adopted to erect a Radio station in the Capital of each State is still under consideration, as is also the erection of a high power Radio station to work with Europe and the United States of America.

The last named service is actually carried out via Trinidad (VPL) messages being accepted to any part of the world and forwarded via Radio to Trinidad and then by cable. The charges of one bolivar and twenty-five centimos being equally divided between the two stations.

There also exists by decree, dated July 23rd, 1921, a National School of Radiotelegraphy, an Institution destined to provide the country with native operators for the service. The school is directed by Lieut. Antonio Toro Key, who returned some months ago from the United States of America, where he had been sent by the Government in order to gain instruction and experience in the art of Radiotelegraphy.

ADMINISTRATION.

The laws and regulations relating to wireless telegraphy and telephony are contained under the following :—

A—Radiotelegraphic Regulations.

B—Instructions for Radio Telegraphic Stations.

DOCTOR V. MARQUEZ BUSTILLOS,

Provisional President of the Republic,

in virtue of Clause 10 of Article 79 of the National Constitution

A DECREES THE FOLLOWING RADIOTELEGRAPHIC REGULATION. HEADING No. 1.—PRELIMINARY CONDITIONS.

ART. 1.—Wireless telegraphy or radiotelegraphy in Venezuela will be governed by the Law of Telegraphs and Telephones, by the International Radiotelegraphic Convention, by the other special conventions made in respect thereto, by the conditions of the present Decree, and by others that may be prescribed.

ART. 2.—Pre-eminent control and administration of radiotelegraph installations will be in the hands of the Ministry of Public Works; but if the Federal Executive should desire it, they can in war time be placed under the direction of the War Office and Admiralty.

ART. 3.—The National territory is divided into two zones, subject to regulation and jurisdiction. The maritime zone comprises the territorial waters of the Republic, including the navigable rivers. The terrestrial zone embraces all the other installations erected within the Venezuelan territory, including islands, shores and banks.

ART. 4.—With the exception of National or foreign warships, no ship which is anchored may use its radiotelegraph installations, while it is not sailing, unless justified by reason of urgency.

ART. 5.—According to their purpose, radiotelegraph stations are divided as follows:—1st, central station; 2nd, local stations; 3rd, training stations; 4th, portable stations.

ART. 6.—Only the National Government may possess radiotelegraph stations in the terrestrial zone of Venezuela. Private people may be able to use them, subject to the ruling conditions and tariffs.

ART. 7.—All National or foreign merchant vessels carrying more than fifty passengers on an ordinary voyage, whether they put in or anchor at Venezuelan ports, must be in possession of a wireless telegraph installation in perfect condition, and another emergency installation besides, which can work for at least six hours, and be set quickly to work in case of the former apparatus getting out of order in times of danger.

ART. 8.—Boats excepted by the International Conventions and those exclusively devoted to coast navigation through National territorial waters are exempted from carrying wireless installations.

Boats which are exempted from the said obligation may not possess radio installations without previous permission from the Federal Executive.

GENERAL CONDITIONS.

FIRST SECTION.

Signals and Radiotelegraphic Waves.

ART. 9.—The exchange of signals, superfluous words, experimenting or practising that may in any way interrupt radiotelegraphic correspondence is forbidden at ordinary stations.

ART. 10.—The normal length of a wave will be 600 metres. Training and portable stations shall use a smaller one, to be fixed for them, so as not to interfere with ordinary communications.

ART. 11.—Permission is given in exceptional circumstances for other wavelengths to be used in accordance with the limits of the International Regulations.

ART. 12.—The signs used for radiotelegraphic communications will be those of the International Morse alphabet.

ART. 13.—Ships in distress will use the sign adopted by the International Conventions.

ART. 14.—As soon as a station hears danger calls, it shall suspend all correspondence and not resume it until after having made certain that the communication of danger has been concluded; it shall attend to the calls wherever there origin may be, and answer them; it shall in conformity with the notifications from the ship communicate with the authorities of the respective littoral.

ART. 15.—In radio communications between coast and ship stations the call, pauses and inquiries noted in the Regulation annexed to Radiotelegraphic Convention, signed in London on the 5th July, 1912, shall be observed; this will not prevent the use of others for interior service, but in this case the use of those universally adopted signals that might cause confusion is strictly forbidden.

SECOND SECTION.

(*r*) *Personnel of the Radiotelegraph Service.*

ART. 16.—The Director-General of Telegraphs and Federal Telephones will be the head of the radiotelegraph stations in everything concerning the service. Anything relating to the inspection and working of the installations, complaints, fulfilment of regulations and application of penalties is included in his duties which he shall exercise direct, giving an account of each case to the Ministry of Public Works.

ART. 17.—For the supervision of installations, the Ministry of Public Works may appoint inspectors of radiotelegraphy, with jurisdiction over a particular littoral.

ART. 18.—The radiotelegraphic service of each installation shall be performed by an operator who holds a first-class efficiency certificate. The latter includes,—

- (a) A knowledge of the apparatus and of their arrangement and working;
- (b) A capacity for transmitting and receiving audibly at a minimum speed of twenty words a minute;
- (c) A knowledge of the International Regulations, local laws and regulations compulsorily applicable to the service and exchange of radiotelegraph communications.

ART. 19.—In exceptional cases, when the service has to be entrusted to an operator who has only a second-class certificate, the latter must guarantee the same efficiency as a first class, except in regard to speed transmission and reception capacity, which must never be less than twelve words a minute.

ART. 20.—The duties of bookkeeping and filing at radiotelegraph stations are under the charge of the operator and the Exchequer of Federal Telegraphs and Telephones.

ART. 21.—Radiotelegraph stations, according to their importance and local regulations, shall be worked by a requisite subordinate staff in accordance with the dispositions of the Ministry of Public Works, for dealing effectively with the service.

ART. 22.—Radiotelegraph stations shall be connected with the National Telegraph system.

Radiograms may be handed in at ordinary telegraph offices for transmission by wire to the stations. In these cases the receiving clerk must make separate bookkeeping entries.

(b) *School of Radiotelegraphy.*

ART. 23.—The School of Radiotelegraphy is an institution for educating the technical staff of the Republican radiotelegraph and radiotelephone stations.

ART. 24.—The Director-General of Telegraphs and Federal Telephones, the Head Professor and a language Professor will constitute the personnel of the school.

ART. 25.—The Director-General of Federal Telegraphs and Telephones shall exercise control over the school and see that it is well conducted, notifying the Ministry of Public Works every time amendments are necessary or suitable improvements might be adopted.

ART. 26.—The Head Professor, who is immediately subordinate to the Federal Director-General of Telegraphs and Telephones, shall deal with the organisation and working of the institution, and shall besides give instruction on the subjects necessary for the course of training, and in accordance with the programme of studies which he shall elaborate and submit for approval to the Ministry of Public Works.

ART. 27.—The Language Professor shall give pupils the special instruction desired and do his best besides to assist in the good management of the school.

ART. 28.—To be admitted as a pupil in the school the following is necessary:—

- (a) To be over eighteen and under thirty-five years of age;
- (b) A holder of a high grade certificate of instruction;
- (c) To be known to be of good conduct;
- (d) A holder of a certificate from the National Health Office certifying good health;
- (e) Written permission from a legal representative in the case of minors.
- (f) To request registration in a legal form within the prescribed time before the opening of a term. The request shall be addressed to the Minister of Public Works and shall be accompanied by the confirmation that the other requisites herein mentioned are complete.

ART. 29.—The number of pupils that will form a radiotelegraphic course shall in every case be fixed by the Ministry of Public Works.

ART. 30.—Nobody can be appointed to take an operator's position in the Republican Radiotelegraph of Radiotelephone Service who has not obtained a diploma for efficiency.

ART. 31.—In order to obtain the diploma referred to in the previous Article it is necessary to have gone through a course at the School of Radiotelegraphy in the subjects contained in the schedule of studies and to have passed the requisite examination satisfactorily, which shall consist of three divisions:—

- (i) A half an hour's oral test on subjects taken by ballot from the programme which shall be done by numbering slips from one upwards to the number of subjects contained in the programme.
- (ii) To draw up in fifteen minutes a document of the service proposed by the Examining Board.
- (iii) Transmitting and receiving practice for fifteen minutes. In no case will a candidate be approved who has not executed a speed minimum of twelve words a minute.

ART. 32.—The optional examinations for the diploma are always individual ones, and can be arranged at any time on the date fixed by the Ministry of Public Works, in accordance with the request which the candidate must make in legal form, which must bear at the foot thereof the certificate issued by the Director of the School, stating that the candidate has attended the course regularly, been punctual for the classes and done the tasks required in accordance with the schedule of studies.

ART. 33.—If the candidate should be approved, besides the diploma a certificate will be sent him, a first-class one if the transmitting and receiving speed is a minimum of twenty words a minute, and a second-class one if the speed varies between twelve and nineteen words a minute.

ART. 34.—The examining boards for the diploma shall consist of five members: the Director-General of Federal Telegraphs and Telephones, the Head Professor of the School of Radiotelegraphy and three technical specialists, preferably chosen from first-class operators.

THIRD SECTION.

RADIOTELEGRAPHIC SERVICE, OFFICIAL AND PRIVATE.

I.—*Order and Preference.*

ART. 35.—The radiotelegraph service is intended chiefly for commerce and private people. Only when it is a question of messages

sent by the President of the Republic or by the Commander-in-Chief of the National Army, in case of interruption of the ordinary lines or on matters of distinct urgency may the wireless telegraph of the terrestrial zone be used for official communications.

ART. 36.—Radiograms shall be despatched in the following order :—

- (a) Official service, and this will be according to the rank of the sending official.
- (b) Private radiograms in the order in which they are handed in.

ART. 37.—Radiograms referred to in Article 13 shall have absolute priority.

II.—Free Traffic.

ART. 38.—Radiograms will be free that are sent on service matters by officials authorised by the Law on Telegraphs and Telephones of the 20th June, 1918.

ART. 39.—Free traffic is not exempt from the supplementary taxes of ships and other foreign stations that have to handle the communications.

ART. 40.—The right to send a reply free of charge is proved by the presentation of the official radiotelegram or telegram requiring it.

III.—Tariff.

ART. 41.—The radiotelegraphic charge will be :—

I.—For Interior Service.

- (a) *Radiotelegraphic charge, properly so-called* at the rate of B. 0.25 a word with a minimum of ten words for every radiogram.
- (b) *Telegraphic or postal charge*, or both, according to the means of communication to be employed, whenever there is no radiotelegraphic station at the place of origin or destination, and whenever the sender may request these special services.

II.—For Exterior Service.

- (a) *Radiotelegraphic charge properly so-called* at the rate of B. 0.60 per word, with a minimum of ten words for every radiogram.
- (b) *Coast or ship tax* of the station or ship to which the radiogram is sent according to the special tariff for same.
- (c) *Telegraphic or postal charge*, or both, according to the means of communication that may have to be employed, whenever there is no radiotelegraphic station at the place of origin or destination, and whenever the sender may request these special services.

Sole paragraph. *In the radiotelegraphic charge properly so-called* the address and signature will be collected both for interior and exterior service.

IV.—Secrecy.

ART. 42.—All legal dispositions relating to keeping correspondence secret shall be applied to radiotelegrams.

ART. 43.—Only the President of the Republic, the Commander-in-Chief of the National Army, the Ministers of the Interior, the Governor of the Federal District and National Diplomatic Ministers or foreign residential ones may send or receive messages in code without any restriction.

ART. 44.—Subordinate employees will also be allowed to send cypher radiograms when dealing with a reply so required by their superiors mentioned in the foregoing Article.

ART. 45.—In International communications private people may for the purposes of economy

use ordinary well-known telegraphic codes ; but in every case the translation of the message must be attached so that it can be filed with the original radiogram.

HEADING No. III. SPECIAL CONDITIONS. FIRST SECTION.—PENALTIES.

ART. 46.—Breaches of the present Regulations will be punished by fines from 100 to 20,000 bolivares, which will be applied by the Director of Federal Telegraphs and Telephones, or imprisonment in proportion. In the event of their being guaranteed these fines will be subject to appeal before the Ministry of Public Works.

ART. 47.—The possession or use of clandestine radio electrical installations will be punishable by fine up to 20,000 bolivares and also by Government confiscation of apparatus and instruments : without prejudice to a prosecution that might be taken up, when besides infringing these conditions the fact constitutes an offence against the security of the State or the Constitutional Powers.

SECOND SECTION.—INSTRUCTIONS.

ART. 48.—By separate resolutions the Ministry of Public Works will draw up the instructions to be observed in the radiotelegraph service ; it will fix the places where the stations shall be installed ; it will grant the permits referred to in Article 8 ; it will organise the instruction and examination of operators ; it will fix bases for bookkeeping, and will prescribe all rules of a technical character that have to be observed in the service.

Given, signed, sealed with the Seal of the Federal Executive and countersigned by the Minister of Public Works, at the Federal Palace, Caracas, on the thirty-first day of the month of January, 1921. The 111th year of Independence and the 62nd of the Federation.

(Place for the Seal.)

V. MARQUEZ BUSTILLOS.

Countersigned.

G. TORRES,
The Minister of Public Works.

MINISTRY OF PUBLIC WORKS.
UNITED STATES OF VENEZUELA—MINISTRY OF PUBLIC WORKS—DIRECTION GENERAL OF STATISTICS AND COMMUNICATIONS.

B CARACAS, 31st January, 1921.
111th and 62nd Year.

It is Resolved :

By Order of the Provisional President of the Republic and in conformity with Article 48 of the Radiotelegraphic Regulations for the following to be binding.

INSTRUCTIONS FOR RADIOTELEGRAPHIC STATIONS. PRELIMINARY REMARKS.

The present instructions contain the rules which must be observed by the Venezuelan stations in the execution of the Radiotelegraphic Service.

These rules refer principally :

- (1) To the tariff.
- (2) To the transmission of radiotelegrams.
- (3) To the admission and classification of messages.
- (4) To the signals adopted.

Besides the present instructions, the object of which is to facilitate the regularity of the service, the Venezuelan radiotelegraphic stations will be subject to the Law of Telegraphs and

Telephones, to the International Telegraphic Convention, and the International Radiotelegraphic Convention, as well as the regulations annexed to these. The said date will furnish the basis for the execution of the service in the International régime.

The stations will be also subject to the telegraphic tariff used in Venezuela and to those besides which link up the service with the exterior so as to make up the total rate of each message. Likewise they will be subject to the nomenclature of the radiotelegraphic stations, and finally to all the legal conditions and Venezuelan regulations referring to the radiotelegraphic service.

No. 1.—RADIOTELEGRAPHIC STATIONS.

A. Radiotelegraphic stations are shown in the "nomenclature of radiotelegraphic stations" This nomenclature gives the following particulars in regard to every station:—

(1) For coast stations the name, nationality, and geographical position indicated by the territorial division, and by the longitude and latitude of the place; for ship stations, the name, and nationality of the ship, and in certain cases the name and address of the owner.

(2) The call signal. (The signals are different from one another, and each one is formed by a group of three letters.)

(3) Normal range.

(4) The radiotelegraphic system of transmission (musical spark, tonality expressed by the number of duplicate vibrations, etc.)

(5) Length of waves used. (The length of the normal wave is underlined.)

(6) The nature of the services effected.

(7) The hours of opening.

(8) If the case should arise the hour and method of sending hourly signals and meteorological reports.

(9) The coast and ship tariff.

B. The name of the ship station as shown in the first column of the nomenclature is followed in case of ambiguity by the call signal of the station.

C. The following abbreviations are used in service documents:—

P.G.—Station opened for public correspondence in general.

P.R.—Station opened for restricted public correspondence.

P.—Station opened for private interests.

O.—Station opened only for official correspondence.

N.—Station for permanent service.

X.—Station with no fixed intermission.

D. At coast stations the service will be as far as possible permanent by day and night without interruption. Nevertheless, some stations can carry on a service of limited duration.

Coast stations where the service is not permanent may not suspend their work until having transmitted all their radiotelegrams to the ships which are in the sphere of action, nor until after having received from these ships all the radiotelegrams advised. This condition is likewise applicable when ships signal their presence before the suspension of work has been effected.

E. Ship stations are divided into three categories:—

(1) Stations for permanent service.

(2) Stations for limited service.

(3) Stations with no fixed intermission.

During navigation the following must remain in expectation of reception:—

(1) Stations under the first category.

(2) Those under the second category during service hours, and outside of those hours during the first ten minutes of each hour.

Stations of the third category are not bound by any regular waiting service.

The radiotelegraphic service of the ship station is under the supreme authority of the commander or captain of the ship.

F. Fixed stations of the terrestrial zone are divided according to their purpose into four categories, namely:—

(1) Central station

(2) Local stations.

(3) Training stations.

(4) Portable stations.

G. The central station as regard service is bound by obligations of the coast stations.

Local internal stations, which, on account of their position, are outside of communication with ships, will be worked like ordinary national telegraph offices.

Training and portable stations will be governed by the special provisions concerning them which will be prescribed in each case by separate resolutions.

H. All fixed radiotelegraphic stations will be linked with the telegraphic system of Venezuela. By the latter, radiotelegrams can be sent and received.

No. 2.—RADIOTELEGRAPHIC

CORRESPONDENCE.

A. Every person has the right to make use of International radiotelegraphic communication.

The sender of a private telegram is obliged to prove his identity when asked by the office or station of origin.

The right to correspond radiotelegraphically is subject, nevertheless, to the fulfilment of the local regulations and tariffs.

B. The Government does not accept any responsibility by reason of the radiotelegraphic service supplied to private people.

C. The text of the telegram must be written legibly in characters which have their equivalent on the telegraphic signals used in Venezuela. These characters are as follows:—

LETTERS.

A B C D E F G H I J K L M N O P Q R S

T U V W X Y Z.

ã ñ õ ü.

FIGURES.

1 2 3 4 5 6 7 8 9 0

SIGNS OF PUNCTUATION.

Full stop (.); comma (,); semi-colon (;); colon (:); note of interrogation (?); exclamation mark (!); apostrophe ('); hyphen (-); parenthesis (); inverted commas (""); oblique (/); underline (—).

D. The various parts of which a telegram is composed should be written in the following order:—

(1) Supplementary instructions.

(2) The address.

(3) The text.

(4) The signature.

E. The sender must write on the form immediately before the address the supplementary instructions.

Multiple radiotelegrams will have this remark written immediately before the addresses concerned.

The remark "Urgent" is not admitted in Venezuela except on the ordinary telegraphic system.

F. Every address must contain at least two words. The first giving the name of the addressee, the second indicating the station of destination. Nevertheless, if the address is lacking in further necessary particulars for the addressee to be traced without difficulty by the office of destination the sender shall abide by the consequences of insufficient address.

G. The address of radiotelegrams destined for ships must be as full as possible. They must necessarily contain:—

(a) Name or capacity of the addressee with supplementary particulars if need be.

(b) Name of the boat as shown in the first column of the nomenclature.

(c) Name of the coast stations as shown in the nomenclature.

Nevertheless, the name of the ship may be substituted at the sender's risk by the route indication and determined by the name of the ports of origin and destination or by some other similar remark.

H. Telegrams without text are admitted.

The text may be written in plain language or in secret language, and in the latter case it may be in code language or in cypher language. Each one of these languages may be used singly or in combination with others in the same telegram.

It can also be written by means of the International Code of signals. The radiotelegraphic station will not translate this text when the telegram has to be retransmitted to another station.

I. The station of origin in Venezuela does not admit messages in secret language except on condition that they fulfil the requirements established in Article 45 of the radiotelegraphic Regulations. This provision is not applicable to transit telegrams.

J. Plain language is understood to be that which suggests an intelligible meaning in one or more of the languages authorised for International telegraphic correspondence.

The use of code addresses, commercial signs, international code signals, abbreviations, initials such as f.o.b., c.i.f., or analogous terms do not deprive the telegram of its plain language character.

K. Code language is composed of words that do not form intelligible sentences.

Words actual or artificial must be pronounceable in Spanish, German, French, Dutch, English, Italian, Portuguese or Latin.

Artificial words must not bear accented letters.

Code language words must not have more than ten characters of the Morse alphabet. The ch or any other combination of vowels or double consonants will be counted as two letters in artificial words.

Words formed by the combination of two or more in plain language against the usage of the language are not admitted.

L. Cypher language is that formed by—

(1) Either Arabic cyphers, groups or series of Arabic numbers with a secret meaning, or by letters (unaccented), groups or series of letters with a secret meaning.

(2) Words, names, expressions or combinations of letters which do not fulfil the conditions of plain language nor of code language. The mixture of cyphers and letters with a secret meaning is not admitted in the same group.

The groups referred to under Paragraph J are not considered to be of secret meaning.

M. The signature is not obligatory; it may be written by the sender in accordance with custom or substituted by a registered address.

It is indispensable for every message to be signed in Venezuela, although the signature need not be transmitted, at any rate the registered address used as the signature must be translated at the foot of the telegram.

No. 3.—OFFICIAL RADIOTELEGRAMS.

A. An official message is understood to be that dealing with matters of public service and sent by a Government official in the exercise of his duties.

B. Official radiotelegrams must bear the seal of or a memorandum from the sending official unless there is no doubt of their authenticity.

C. The right to send a reply as an official radiotelegram is proved by the production of the message requiring it.

D. Official radiotelegrams can in any case be written in secret language.

E. The receiving station must repeat official messages; partially if they are written in plain language, and wholly if in secret language.

No. 4.—SERVICE RADIOTELEGRAMS.

A. Only authorised employees can send service radiotelegrams free. This privilege is limited to radios that present an urgent character and they must be written in a concise form. Exclusive of such cases the station may refuse the message or forward a duplicate by post.

B. Service advices may also be exchanged free of tariff between two or more stations respecting repetitions, rectifications, or cancellation of messages or anything affecting the correct transmission.

C. When the service advice is requested by a private person it will be charged according to the tariff. In communications with boats the advice may only refer to the rectification of radios previously transmitted. The letters S.T. must precede the preamble of these radiotelegrams. If there should be need to rectify a word it will be indicated by the position it occupies in the text of the message, independent of the rules of taxation.

No. 5.—METHOD OF COUNTING WORDS.

A. All that which the sender writes on the form for transmission is subject to taxation, and is included in the number of words. Hyphens which separate words and signs of punctuation are only transmitted by special request or when they form groups of signs in secret language, and in these cases they are subject to tariff.

B. The name of the station, number of the radiotelegram, time of handing in and other indications in the preamble are not counted or

charged unless the sender inserts any of these remarks in the text of his radiotelegram, and then they form part of the number of chargeable words.

C. One word is counted for the following in all languages :—

(1) In the address.

(a) The name of the office of destination (or the coast station) written as shown in the first column of the Nomenclature with the relative indications.

(b) The names of the territorial subdivisions respectively written in accordance with the Nomenclature.

(2) The name of the ship as shown in the first column of the Nomenclature.

(3) The code words fulfilling the conditions under paragraph K of No. 2.

(4) Every isolated character, letter or cypher, as well as every sign of punctuation, apostrophe or hyphen transmitted at the sender's request.

(5) The underline.

(6) The parenthesis signs.

(7) The inverted commas.

(8) The supplementary instructions.

D. In plain language any word or authorised group—containing fifteen letters of the Morse alphabet is reckoned as a single word. Any characters in excess, should there be any, are calculated as an additional word.

In code language every ten characters are counted as one word.

In cypher language every five letters or numbers are counted as one word.

E. If in the same message there should be complete sentences in plain language and in code language or cypher language the words in each sentence will be counted according to the former rule; but if there should be code or cypher words intercepted in the plain language the whole radiotelegram will be considered as cypher, and if without cyphers as code language.

F. Words joined by hyphens and apostrophes will be counted as separated and the syllabic sounds by the number of letters of which they are composed.

G. The combination of words against general usage is not admitted. Usage is justified if the point should arise by reference to a dictionary of the respective language.

H. The counting of words at the station of origin is decisive, but if the office of destination should discover an error it may claim the excess from the addressee, and if the latter should refuse to pay it have a service advice sent for the amount to be collected from the sender. When the latter has paid the difference another service advice will be sent authorising delivery of the message.

No. 6.—TARIFFS AND TAXATION.

A. Radiotelegrams originating from a ship are taxed as addressed to the nearest coast station. In the charge the supplementary telegraphic tariff will be included.

B. When the sender gives instructions on his message for the retransmission of the radiotelegram to another station he shall pay the tariff relative to each service. This rule will be applied when the retransmission of a radio sent by land is effected through two or more ship stations.

C. The total rate for telegrams will be collected from the sender except :—

(1) Express charges.

(2) Portage charges by the station of destination.

(3) In cases provided for under letter G of this paragraph.

D. The rate will be collected in bolívares, and foreign tariffs will in each case be converted to this currency.

E. Rates will be fixed in accordance with the particulars in the Nomenclature.

F. Ship stations may obtain information from coast stations when they are not in possession of all the necessary particulars for making up the rate of the telegrams.

G. When the transit tax is not shown in the Nomenclature the office of origin will include in the preamble the remark "tax to be collected." The same thing will be done when it is from a sender in a country not adherent to the International Conventions.

H. The sender of the radiotelegram has the right to ask for a receipt with a note of the amount collected. The office of origin may charge a fee for this of 25 cents.

No. 7.—TRANSMISSION OF RADIOTELEGRAMS.

A. The length of a normal wave is 600 metres. Every station must be equipped so as to be able to send waves of 300 metres as well. But it must always be in condition to receive calls made by means of the normal wavelength.

B. Stations intended exclusively for determining the position of ships must not use wavelengths exceeding 150 metres.

C. The foregoing conditions, indispensable to a good public service shall not prevent, if the case should arise, for the Government to make any variations which it may judge convenient for its radiotelegraphic correspondence.

D. Stations must maintain traffic with the least waste of power. Ship stations must not use more than 1 kW, unless the boat is obliged to communicate at a distance exceeding 200 nautical miles, or when exceptional circumstances require an increase in power.

E. The exchange of signals, superfluous words, experimenting or practice, that may disturb the service of other stations is forbidden. For this reason training and portable stations will use wavelengths different to the normal.

F. Should the foregoing rules be infringed the station must lodge a complaint in detail to the Direction-General of Federal Telegraphs and Telephones.

No. 8.—TRANSMITTING SIGNALS.

A. The Morse Code signals are used in the service.

B. The spacing and length of the signals is as follows :—

(1) The dash is equal to three dots.

(2) The space between the signals of the same letter is equal to a dot.

(3) A space between two letters is equal to three dots.

(4) A space between two words is equal to five dots.

C. Letters are represented by the signal shown in the following table :—

a ● —
 ā ● — ● —
 ä ● — ● —
 b — — ● —
 c — — ● —
 ch — — — —
 d — — ● —
 e ●
 ē ● — — ● —
 f ● — — —
 g — — ● —
 h — — ● —
 i ● —
 j — — — —
 k — — — —
 l — — ● —
 m — —

D. The figures are represented as follows :—

[illegible]

In office repetitions and in the preamble and in cypher telegrams with the remark "in cypher" numbers may be abbreviated as follows:—

1	● —	6	— ● ● ● ●
2	● ● —	7	— ● ● ● ●
3	● ● ● —	8	— ● ●
4	● ● ● ● —	9	— ●
5	● ● ● ● ●	0	—

E. Signs of punctuation and other indications are represented as follows :—

Punto (.)	• • • • •
Coma (,)	— — — — •
Punto y coma (;)	— — — — •
Dos puntos (:)	— — — — •
Punto de interrogación o demanda de una transmisión no com- prendida (?)	• • — — • •
Punto de admiración (!)	— — — — —
Apóstrofe (')	— — — — •
Guión (-)	— — — — •
Raya de fracción (/)	— • — — —
Paréntesis, antes y des- pués de las palabras ()	— — — — —
Comillas, antes y des- pués de las palabras ("...")	• • — — • •
Subrayado antes y des- pués de las palabras o de las frases	• • — — —
Llamada (preliminar de toda transmisión)	— — — — —
Doble guión (=)	• • — — —
Comprendido	• • — — —
Error	• • — — —
Cruz (+)	• • — — —
Invitación a transmitir	— — — — —
Espera	• • — — • •
Fin de trabajo	• • — — —
Señal de siniestro (re- petida a cortos inter- valos)	• • — — —

In the transmission of fractions, whole numbers should be separated from the fractions by the double hyphen (=) so as to avoid—*e.g.*, 11/4 being confused with 1=1/4.

• F. When a station notices the distress signal • • • — — — • • it shall suspend all correspondence, and not renew it until having made certain that the communication which originated by the call for help has been concluded.

G. The station which perceived a call for help must obtain all necessary particulars from the ship making the call as regards the order of the communications or the cessation of them.

H. When a signal for help is addressed to a particular station it devolves upon the latter to reply unless it cannot reply. In the absence of a special indication each station is obliged to answer.

I. Stations must alternate in their transmission of radiotelegrams and each series should not exceed fifteen minutes.

J. A transmission begun shall only be suspended in case of absolute urgency.

K. Radiotelegrams of the same category shall be forwarded in the order in which they are handed in.

L. The order of priority is as follows :—

- (1) Official radiotelegrams in accordance with the rank of the sending official.
- (2) Service radiotelegrams.
- (3) Private radiotelegrams.

M. The call signal is composed of the sign **— • — • —** followed by the call repeated three times by the station called, the word "from" and the signal repeated three times from the station calling.

N. The station called replies by the signal — • — • — followed by the call signal repeated three times from the station in question by the word "from" its call signal, and the sign — • —

O. As a general rule the ship station is the one that calls the coast station whether the latter should have radiotelegrams to transmit or not.

P. Stations which want to communicate with ships without knowing the names of those in their sphere of action may use the exploration signal **— • — — • — • —**

Q. Every station that is obliged to effect transmission of high power first of all sends the advice signal three times — — — — — with the minimum power required for reaching the neighbouring stations. The high power shall not be begun to be transmitted until thirty seconds after the despatch of the advice signal.

R. If a station cannot reply to a call signal which is repeated three times at intervals of two minutes each, the call cannot be repeated until an interval of fifteen minutes has elapsed. The station calling verifying that there is no other radiotelegraphic communication in progress.

5. The ship station must inform each coast station to whom it has signalled its presence when it proposes to cease operations, and how long the interruption will last.

T. As soon as the coast station has replied the ship station will furnish the information that follows, if it has messages to be transmitted to it, the following information will also be given when the coast station asks for it:—

(a) The approximate distance in nautical miles from the ship to the coast station.

(b) The position of the ship shown in a concise manner, clear and applicable to the circumstances of the case.

(c) The nearest port at which the ship will touch.

(d) The number of radiotelegrams, if they are of ordinary length, or the number of words if they are exceptionally long.

The speed of the ship in nautical miles will be specially shown at the particular request of the coast station. The coast station should reply at once and indicate the number of radiotelegrams that it has to transmit.

In case the transmission cannot be made immediately, both should communicate the approximate duration of the time of waiting.

Between two ship stations it devolves upon the station called to fix the order of transmission.

When a coast station receives calls from various ship stations it shall decide the order for reception endeavouring for this purpose to procure from every station taking part the transmission of the greatest number of radiotelegrams.

A telegram which is not in order must not be delayed or refused. It must be received and a request made if necessary by service advice for correction.

U. Before beginning a transmission a ship station shall advise whether it should be done in series or in alternate order; the transmission will then be begun by means of the signal — • • • —

V. The transmission of the radiotelegram is preceded by the signal — • • • • • — The station proceeds at once with the transmission of the preamble in the following order:—

(a) Service remark "radio."

(b) Nature of the radiotelegram by one of the remarks S, A, D, according to whether it is an official message, service advice, or a private urgent message.

(c) The letter B is only used when the station is in direct communication with the station of destination.

(d) Office of origin or ship station.

(e) Number of the telegram.

(f) Number of changeable words.

(g) The time of handing in by two groups of figures: the first showing the day of the month, and the second the hour and minutes. Ship stations shall show the time by the numbers 0-24.

(h) The route to be followed will be shown on the form.

(i) Service remarks.

W. After the preamble the supplementary instructions, the address, the text and the signature will be consecutively transmitted.

The double hyphen (— • • • • —) is transmitted so as to separate the preamble from the supplementary instructions and the other parts of the telegram.

The transmission concludes with a signal — • • • • • — followed by the signal of the sending station and by the signal — • • • —. In the case of a series the signal and the signal — • • • — will not be given until the end of the series.

When a radiotelegram contains more than forty words the sending station may interrupt the transmission after every twenty words more or less by means of a sign of interrogation — • • • — and will not go on with the transmission until the repetition of the last word has been properly received, followed by a note of interrogation or if the transmission is correct by the signal — • • • —. If the operator, who is making the transmission, finds that he has made a mistake he will interrupt it by the error signal — • • • • • —, the last word which was correctly transmitted being repeated and the rectified transmission continued.

In the case of transmission by series the advice of receipt will be given after every radiogram.

The coast stations occupied in transmitting long radiotelegrams must suspend transmission at the end of a period of fifteen minutes, and keep silent for three minutes before continuing the transmission.

X. The advice of receipt will be given by means of the letter R followed by the number of the radiotelegram received. This advice is preceded by the indication signal of the sending station and followed by that of the receiving station.

Y. The conclusion of the operation between two stations is indicated by each one by means of a signal — • • • • • — followed by the relative indication.

Z. When signals are doubtful the radiotelegram may be repeated up to three times. If it is still illegible it is cancelled.

In any case the receiving station can send it to its destination bearing the service mark "reception doubtful."

The sender of a radiotelegram who establishes his identity may cancel it. If it should not have been transmitted the charges will be returned to him with the exception of a tax of 25 cents, bolivares.

If the transmission should have already been effected the cancellation will be made by a taxed service advice.

NO. 9.—FORWARDING TO DESTINATION

A. The sender may order a radio to be sent by telephone. If so, the word "Telephone" shall be written before the address.

B. For despatch to destination radiograms are classified in the same order of priority as for transmission.

C. Radios with the remark "Day" are not delivered during the night; those received during the night are not immediately delivered unless they contain the word "Night," or the receiving station should consider them to be of a real urgent character.

D. The radiogram may be delivered in the absence of the addressee to the members of his family, and to persons in his employ. The remark "M.P." or "manos propias," i.e. (own hands), as well as the remark "Open," are only admitted in official correspondence.

E. When the radiograms cannot be delivered the station of destination shall explain the reason by service advice. If need be, a mistake in the address will be corrected.

F. Radiograms not transmitted shall be sent by post to the Direction-General of Federal Telegraphs and Telephones to be filed.

G. When a radiogram has to be transmitted to a boat and the latter is not yet within range

of the station, it will be treated like a message not transmitted, the sender being advised on the eighth day unless the latter should order another waiting period of nine days. If the station is sure that the ship has sailed from its range it may cancel the message and advise the sender.

Let it be communicated and published.

By the Federal Executive,

G. TORRES.

VIRGIN ISLANDS OF THE U.S.A.

(See also Map Section)

THESE islands were purchased from Denmark on December 22, 1916, by the United States of America, and are administered by a Governor. They have an area of 132 square miles and a population of 26,051.

CONTROL.

There are two wireless stations in the Virgin Islands, which are owned and administered by the United States Navy, and are governed by such laws and regulations as are in force in the United States of America.

WEIHAIWEI

(See also Map Section)

WEIHAIWEI, a territory in the Shantung district of China, leased by that Republic to Great Britain in 1898, lies in latitude $37^{\circ} 30' N.$ and longitude $121^{\circ} 40' E.$ The total area comprises 285 square miles with a population of 147,177.

Negotiations are under way for the formal handing back of Weihaiwei to China, and may possibly be concluded by the time this book is published.

CONTROL.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Sir J. H. Stewart Lockhart, K.C.M.G.	Commissioner of Weihaiwei ..	Government House, Port Edward, Weihaiwei.
Mr. A. P. Blunt	Senior District Officer ..	Government Offices, Port Edward, Weihaiwei.

ADMINISTRATION.

Wireless Telegraphy in the territory is governed by :

A—Ordinance No. 5 of 1913.

A AN ORDINANCE TO PROVIDE FOR THE
REGULATION OF WIRELESS
TELEGRAPHY.

L.S. August 11th, 1913.

BE IT ENACTED by the Commissioner of
Weihaiwei as follows:—

1. This Ordinance may be cited as "The
Wireless Telegraphy Ordinance, 1913."

2. "Telegraph" means an electric, galvanic
or magnetic telegraph, and includes appliances
and apparatus for transmitting or making
telegraphic, telephonic or other communications
by means of electricity, galvanism, or magnetism.

The expression "Wireless Telegraphy"
means any system of communication by
"telegraph" (as defined in this Ordinance)
without the aid of any wire connecting the
points from and at which the messages or
other communications are sent and received:
provided that nothing in this Ordinance shall
prevent any person from making or using an
electrical apparatus for actuating machinery
or for any purpose other than the transmission
of messages.

3. The Commissioner may whenever he
shall deem it expedient to do so license the
establishment of any wireless telegraph
station or the installation or working of any
apparatus for wireless telegraphy in any place
in the territory or on board any British ship
registered in the territory.

4. (i) No person shall establish any wireless
telegraph station or instal or work any apparatus
for wireless telegraphy in any place in the
territory or on board any British ship registered
in the territory except under and in accordance
with a license granted in that behalf by the
Commissioner.

(ii) Every such license shall be in such
form and for such period as the Commis-
sioner may determine and shall contain
such terms, conditions and restrictions on
and subject to which the license is granted as
the Commissioner shall consider desirable
in the public interest.

5. (i) If any person establishes a wireless
telegraph station without a license in that
behalf or installs or works any apparatus for
wireless telegraphy without a license in that
behalf he shall be liable to a fine not exceeding
one thousand dollars or to imprisonment of
either description for a term not exceeding
twelve months and in either case be liable
to forfeit any apparatus for wireless tele-
graphy installed or worked without a license,
but no proceedings shall be taken against any
person under this Ordinance except with the
previous sanction of the Commissioner.

(ii) If a magistrate is satisfied by infor-
mation on oath that there is reasonable
ground for believing that a wireless tele-
graph station has been established without
a license in that behalf or that any apparatus
for wireless telegraphy has been installed or
worked in any place or on board any ship
within the jurisdiction without a license
in that behalf he may grant a search
warrant to any police officer to enter and
inspect the station, place, or ship, and to
seize any apparatus which appears to him
to be used or intended to be used for wireless
telegraphy therein.

6. (1) The Commissioner may make regula-
tions for all or any of the following matters:—

(i) For prescribing the form and manner
in which applications for licenses under
this Ordinance are to be made;

(ii) For prescribing the fees payable
on the grant of any license;

(iii) For regulating the manner in
which apparatus for wireless telegraphy
on board a merchant ship whether
British or foreign in the waters of the
territory shall be worked so as to prevent
interference with naval signalling or the
working of any wireless telegraph station
lawfully established, installed or worked
in the territory or the waters thereof and
so as not to interrupt or interfere with
the transmission of any wireless messages
between wireless telegraph stations estab-
lished as aforesaid on land and wireless
telegraph stations established on ships
at sea;

(iv) For prohibiting except with the
special or general permission of the Com-
missioner the working or using of any
apparatus for wireless telegraphy on
board a merchant ship whether British
or foreign whilst such ship is in any
of the harbours of the territory;

(v) For prohibiting or regulating in
case at any time in the opinion of the
Commissioner an emergency has arisen
in which it is expedient for the public
service that His Majesty's Government
should have control over the transmission
of messages by wireless telegraphy on
board merchant ships whether British
or foreign in the waters of the territory
the use of wireless telegraphy on board
such ships while in such waters by such
further rules as the Commissioner may
see fit to make from time to time and
either in all cases or in such cases as may
be deemed desirable.

(2) Provided that no regulations made
in respect of the matters described in pa-
graphs (iii), (iv) and (v) of this section
shall apply to the use of wireless telegraphy
for the purpose of making or answering
signals of distress.

7. When an applicant for a license proves
to the satisfaction of the Commissioner that
the sole object of obtaining the license is to
enable him to conduct experiments in wireless
telegraphy a license for that purpose shall be
granted subject to such special terms, condi-
tions and restrictions as the Commissioner
may think proper, but shall not be subject to
any rent or royalty.

8. (i) Every omission or neglect to comply
with and every act done or attempted to be
done contrary to the provisions of this Ordi-
nance or of any regulations made thereunder
or in breach of the conditions and restrictions
subject to or upon which any license has been
issued shall be deemed to be an offence against
this Ordinance, and for every such offence
not otherwise specially provided for the
offender shall in addition to the forfeiture of
any articles seized be liable to a fine of five
hundred dollars.

(ii) All convictions, forfeitures and fines
under this Ordinance or any regulations made
thereunder may be had and recovered
before a magistrate.

9. Ordinance No. 1 of 1904 to regulate the
establishment of wireless electric telegraphy
is hereby repealed.

WESTERN SAMOA (Territory of)

(See also Map Section)

Including • Savaii and Upolu.

SAMOA (or Navigators Islands) is a group of islands in the Western Pacific lying in $13\frac{1}{2}^{\circ}$ to 14° S. lat. and 168° to 173° W. long.

The group consists of nine islands in addition to rocks and islets, having a total area of about 1,300 square miles, with a population of 13,051. Only four islands are of any size, Savaii, Upolu, Tutuila and Manua, the two latter and all other islands east of the 171^{st} degree W. longitude are known as American Samoa and are controlled by the Navy Department of the United States of America.

On the northern side of Upolu is the harbour of Apia and along the shore of the bay is built the town of Apia, which is the centre of political and commercial life in Western Samoa. Apia Radio Station is situated about seven miles inland from the town.

At the outbreak of war in 1914, Western Samoa, which was at that time a German possession, was seized by a force of New Zealanders. The military occupation continued until after the signing of peace.

When the Treaty of Peace was signed, the German Government renounced all right and title to the territory of Western Samoa.

It was agreed between the Allied and associated powers that this territory be administrated by His Majesty, in his Government of the Dominion of New Zealand, Colonel R. W. Tate, C.B.E., being appointed Administrator of the territory by the Governor-General of New Zealand.

CONTROL.

The New Zealand Posts and Telegraphs Department is responsible for the administration of Wireless Telegraphy in Western Samoa.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
E. E. Dunwoodie	Superintendent	Apia
J. H. Dixon	Engineer	"
H. S. Fredericks	Senior Operator	"

ORGANISATION.

There is at present only the one station—Apia Radio—but there is a possibility of Savaii being linked up by wireless telephony during the next 18 months.

Apia Radio has two transmitting sets (Telefunken), a 50 kW. and 8 kW. The station is in direct communication with New Zealand every few hours daily and is also responsible for relaying Tahiti, Rarotonga and Nukualofa traffic to and from New Zealand.

Weather reports are transmitted daily (excepting Sundays) at 2330 G.M.T. on 2,000 metres and at 0830 G.M.T. on 600 metres. These are compiled by the Director of the Samoan Observatory at Apia. No other services such as time, press or hydrographic signals are performed.

ADMINISTRATION.

The administration is exactly the same as that of New Zealand, the Governor-General having extended the Post and Telegraph Act, 1908, with its amendments, to apply to Samoa in the same manner as if that territory were part of it.

WINDWARD PASSAGE

(See under BRITISH WEST INDIES.)

ZANZIBAR

(See also Map Section)

Including : Pemba.

THE Zanzibar Protectorate includes the islands of Zanzibar and Pemba. The main islands, which is known as Zanzibar, covering an area of 640 square miles, lies in 6° south latitude, and is separated from the mainland by a channel 22½ miles across at its narrowest part. It was not until during the sixteenth century that the Arabs of the East Coast succeeded in driving out the Portuguese, and the island was then attached (more or less nominally) to the rules of Muscat.

The area of the islands is 1,020 square miles with a population of 196,733.

CONTROL.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
Mr. R. Withycombe, M.B.E. . .	Director of Electricity, Railways, and Wireless Telegraphy	
Mr. S. W. Dyer	Assistant do. do.	Zanzibar Zanzibar

ORGANISATION.

The Government maintains wireless stations in Zanzibar, Pemba (see map on p. 554) and Mafia.

ADMINISTRATION.

We append herewith the Decree issued by the Sultan in 1909 in regard to wireless.

WIRELESS TELEGRAPHY DECREE. No. 6 of 1909.

In the name of the Most Merciful God.
It is hereby declared as follows :—

1. (1) No person shall establish any wireless telegraph station or install any apparatus for wireless telegraphy in any place in our dominions except under and in accordance with a license granted in that behalf by our First Minister.

(2) Every such license shall be in such form and for such period as our First Minister may determine, and shall contain the terms, conditions and restrictions on and subject to which license is granted, any such license may include two or more stations or places.

(3) If any person establishes a wireless telegraph station without a license in that behalf or installs or works any apparatus for wireless telegraphy without a license in that behalf, he shall be guilty of an offence against this Decree, and on conviction he shall be liable to a fine not exceeding 1,500 rupees, or to simple imprisonment for a term not exceeding twelve months, or to both, and in either case be liable to forfeit any apparatus for wireless telegraphy installed or worked without a license, but no proceedings shall be taken against any person under this Decree except by the order of our First Minister.

(4) If the Court is satisfied by information on oath that there is reasonable ground for supposing that a wireless telegraph station has been established without a license in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any ship within its jurisdiction without a license in that behalf, it may grant a warrant to any officer of our police to enter and inspect the station or place or ship, and to seize any apparatus which appears to him to be used, or intended to be used, for wireless telegraphy therein.

(5) Our First Minister may make regulations for prescribing the form and manner in which applications for licenses under this Decree are to be made and fees payable on the grant of any such license.

2. Where the applicant for a license proves to the satisfaction of our First Minister that the sole object of obtaining the license is to enable him to conduct experiments in wireless telegraphy, a license for that purpose shall be granted, subject to such special terms, conditions, and restrictions as our First Minister may think proper, but shall not be subject to any rent or royalty.

3. No person shall work any apparatus for wireless telegraphy installed on any ship whilst that ship is in the waters of our dominions otherwise than in accordance with regulations made in that behalf by our First Minister, and our First Minister may by any such regulations impose penalties for the breach of any such regulations not exceeding 150 rupees for each offence, and may provide for the forfeiture on any such breach of any apparatus for wireless telegraphy installed or worked on such ship. Save as aforesaid, nothing in this Decree shall apply to the working of apparatus for wireless telegraphy installed on any foreign ship.

4. The term "ship" includes steamers, sailing ships, dhows, lighters, rafts, and every other form of boat. The expression "wireless telegraphy" means any system of communication by telegraph as defined in "The Indian Telegraph Act, 1883" without the aid of any wire connecting the points from and at which the messages or other communications are sent and received.

Provided that nothing in this Decree shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

5. This Decree may be cited as "The Wireless Telegraphy Decree, 1909."

Given under our hand and seal this 9th day of February, 1909.

ALI-BIN-HAMOUD.

Countersigned under the provisions of Article 47 of "The Zanzibar Order in Council, 1906."

JOHN H. SINCLAIR,
British Agent and Consul-General.

DIRECTORY OF
THE WORLD'S
WIRELESS
STATIONS

LAND STATIONS

The tables of land stations set out in the following pages should be consulted in conjunction with the "Alphabetical List of Call Letters" subsection and the Map Section of this volume. The stations have been grouped together under the names of the countries in which they are situated.

The following abbreviations are used in the Table of Land Stations below :—(Geographical Position) : E—East Longitude ; W—West Longitude ; N—North Latitude ; S—South Latitude. (Nature of Service) : P G—General Public Correspondence ; P R—Restricted Public Correspondence ; O—Official Correspondence ; D F—Direction Finding Service. (Hours of Service) : N—Continuous Service ; X—No fixed working hours.

N.B.—The times shown are G.M.T. unless otherwise stated.

Name.	Geographical Position.	Call Signal.	Normal Range in Nautical Miles.	Controlled by	Wavelengths in Metres (the Normal Wavelength in Heavy type).	Nature of Service.	Hours of Service.	Coast Charge, Francs.		Remarks.

Demerara	Meridian of Greenwich. 06° 49' 00" N. 58° 11' 00" W.	BZL	500 ¹	British Admiralty	600 ⁴ , 1,800 ² , 1,200, 2,200 ³ , 4,200 ³	P R	N ³	0.60	—	¹ 30 kW. spark and 25 kW. arc sets are fitted. ² Transmitting wave to Trinidad 2,200, receiving 1,800 metres. ³ Transmitting and receiving wavelength for Jamaica 4,200 with arc set ⁴ Other wavelengths for official use only

⁴ No official period can be specified. If a ship is unable to gain the attention of the station after calling twice in the usual way, the call should not normally be repeated until an interval of an hour has passed

¹ Traffic for the United States and United Kingdom is handled via the United Fruit Company's station at Swan Island
² This includes the charge for transmission over the telegraph lines of the colony

¹ Acts as a relay station for Belize, British Honduras, for traffic intended for the United States and United Kingdom

¹ Information regarding weather is broadcast at 0630 and 1830 (Indian standard time, 5 hours 30 minutes in advance of Greenwich mean time), on 2,000 metres wavelength. Navigational warnings are broadcast five minutes later on 600 metres wavelength
² During the daytime the station is largely occupied with inland communication.

³ Information regarding weather is broadcast at 0700, and 1900 (Indian standard time, 5 hours 30 minutes in advance of Greenwich mean time), on 2,000 metres wavelength. Navigational warnings are broadcast 15 minutes earlier on 600 metres wavelength

⁴ Each weather report from this station is immediately preceded by time signals on the Inter-

¹ For inland service communication
² In the case of radio-telegrams neither originating at nor intended for Berbera itself, the coast charge is included in the charge for transmission between Aden and Berbera
³ Temporarily closed
⁴ Three hours in advance of Greenwich time

¹ The station sends out a weather bulletin at 0100 and 1300 (Greenwich mean time) on a wavelength of 1,200 metres. It also issues, when necessary, at the same time a hydrographic message
In the case of radio telegrams originating at or intended for Port of Spain (Trinidad) or Scarborough (Tobago) the charge for transmission between the coast station and either of these places

¹ Weather forecasts transmitted free of charge on request. Messages concerning navigation to any department or officer of the Government handled free of coast tax. Weather and ice reports from captain of a vessel also free of coast charge.

² For radio telegrams sent by or addressed of the commander of a ship relating to the service of the ship the coast charge is reduced to fcs. 0.25 per word. The preamble of such messages should contain the service instruction S.B.

³ Cape Sable and Sable Island communicate with the land telegraph system through Camperdown. The retransmission charge between these stations and Camperdown is fcs. 0.30 per word. This charge is additional to the ordinary radio and land line rates.

⁴ Not yet in operation.

⁵ For radiotelegrams sent for or addressed to ships engaged in the local service between Victoria, Vancouver and Seattle, the coast charge is fcs. 0.15 per word. The preamble of such radiotelegrams should contain the service instruction F.B.

⁶ Station sends out messages concerning ice dangers and weather. (See International Time and Weather Signal Station)

⁷ Broadcasting station.

⁸ The station is open only during the season of navigation, approximately April to December.

⁹ Weather, ice and other reports transmitted daily.

2100. During the winter on the Finnish ice conditions sent out at about 1700. Exchanges private communications with Riga and Bu, barest.

¹ Coast station charge 40 centimes per word.

The coast charge is reduced to fr. 0.15 per word for ships whose regular service is between France on the one hand, and Corsica, Algeria and Tunis on the other.

² Connected to Mengam (FUE) which will provisionally employ a wavelength of 2,400 m.(c.w.) for reply to requests for

bearings and transmitting results. Bearings on a wavelength of 2,100 m. (c.w.) are obtained by first calling Mengam on 2,400 m. (c.w.)

³ The coast charge is reduced to fr. 0.15 per word for correspondence with ships whose home ports are on the coast of the English Channel and the Straits of Dover, and are engaged in a regular service between France and England.

⁴ Connected with Men-
gam Radio Station, and
serves normally as send-
ing station

⁶ Transmissions are on 900, 1,400 and, occasionally, 2,610 metres. Telephony on 900 is transmitted from the station to aeroplanes leaving Le Bourget. Messages are also sent to Dijon on 1,400 metres between 11 a.m. and 12 noon.⁶ Works in connection with Ouessant, I.S.F. (FFU).

¹ The hours of service are extended on alternate Saturdays to 0800-1300, 1700-1800, and on alternate Sundays to 0800-1000, 1700-1800 for communication with home-bound mail boats

² Government station of Imperial Chain. In addition to communicating with other fixed stations, the station also forwards radiotelegrams on a wavelength of 8,750 metres at the time and charge indicated, to ships which are fitted with continuous wave apparatus

³ Corresponds with fixed stations

⁴ For the communication with Spain

⁵ For correspondence with the Continent

⁶ For radiotelegrams exchanged with all ships except those making regular voyages not exceeding 1,000 miles to or from a port in Great Britain. In the case of radiotelegrams originating in, or destined for, Great Britain the charge is 73 centimes per word, and the charge for transmission over the land lines of Great Britain

⁷ For radiotelegrams exchanged with ships making regular voyages

¹ The station also communicates with Miquelon.
² This station only communicates with Galantry.
³ Four hours behind French Legal Time.
⁴ This station is also equipped with an emergency installation.
⁵ This station communicates with fixed stations only.

¹ The station is connected to the International Telegraph System by wireless through Awani Radio, New Zealand (normal route) or Suva, Fiji Islands (alternative route).
² The relaying rate is 0.63 per word.
³ Local weather bulletin preceded by the letter I are broadcasted by the station at 0230, 1630, 2230 (standard time of the meridian 75° west of Greenwich).

¹ Communicates only with fixed stations.
² Sends meteorological message at 1345 hours daily (G.M.T.).
³ Provisionally, military station.

⁶ The station is intended for the transmission to the Håmösand Radio coast station of telegrams received by means of flag signals from ships passing within sight, or the retransmission by means of the signals to such ships of telegrams sent to it through the Håmösand Radio coast station.

⁷ Telegrams originating on, or intended for, ships,

and forwarded through Hårnösand. Radio, are subject to the coast charge of Hårnösand Radio, the charge of transmission over the inland telegraph lines, and a fixed charge of fr. 1 per telegram. If exceptionally, a telegram intended for a ship at sea is transmitted by radio-telegraphy to the ship by the lighthouse no charge will be credited to the ship station.

* When necessary gale warnings, and notices of other dangers to navigation, are transmitted on 600 metres (damped waves) for Skagerrak and Kattegat; by Göteborg Radio station at 1700 and 2200 (G.M.T.); for Baltic Sea (southern and northern); by Vaxholm Radio station at 1650 and 2150 (G.M.T.) for the Gulf of Bothnia by Hårnösand Radio station at 1635 and 2155 (G.M.T.). These warnings are given in plain English, and are preceded by the safety signal ——— (T T)

* Controlled by Göteborg W/T station (SAB).

¹⁰ Controlled by Gothenburg (SAB) on 600 metres wavelength

¹¹ The station furnishes to ships, on request, information relating to the presence of ice and to other matters affecting navigation, as well as to meteorological conditions. The charge for this information is 6 fr. 25 centimes when the station can furnish it without enquiry by telegraph or by telephone involving expense. Otherwise the charge is 9 fr. 37.5 centimes
